Major Change Coming to Your Bank?

Wells Fargo, Chase, Bank of America, and 4,519 Other Banks Preparing for Biden Presidency

Dear Reader,

This was never mentioned in his Presidential campaign...

But we're about to see a major change to our banking system under Joe Biden's presidency...

Maybe even your bank.

This has been confirmed by this letter from the Office of the Comptroller of the Currency (OCC)...

The agency that regulates and supervises ALL national banks and federal savings associations...

If you have money sitting in a U.S. bank account...

You must pay attention.

Because this major letter signals to our banking system will help mint new millionaires in America, while leaving catastrophic implications for those who don't prepare.

Yahoo Finance called it a **"landmark decision"** that could lead to **"major shifts."**

Financial industry expert Seamus Donohue called the OCC move **"a complete game changer."**

And Morgan Stanley economist Chetan Ahya said, **"A regime shift is underway."**

In just a minute, you'll hear from a former VP of a major U.S. investment bank...

An insider with connections... and a man who's been deeply involved in this major shift.

He you're about to see, this shift could turn or major bank failures.

The FDIC insurance protects you against these risks up to $250,000.

According to this man, this is something far more sinister...

Something that will impact ALL bank accounts in the U.S.

Something that's NOT covered by the FDIC insurance.

Millions of unprepared Americans will fall below the poverty line.

But thanks to this new move from the OCC...

Those who know how to take advantage of this situation will come out of this weather their they even thought possible.

You see, many experts agree that Joe Biden's presidency will unleash an unstoppable force that will impact millions of bank accounts in the U.S...

Something that's far worse than the economic damage from the coronavirus.

As The Economist said...

> "A profound shift is now taking place... the sort that happens only once in a generation. The pandemic marks the start of a new era."
>
> **- The Economist**

And when I say unstoppable, I mean it.

According to this former banker, nobody will be able to stop it.

That's why The Wall Street Journal wrote an article saying, **"It's inevitable."**

And why Yahoo Finance wrote that **"more $50 trillion of retirement savings is at risk."**

Unfortunately, most Americans are still in the dark. Meanwhile...

Some of the savviest investors in the world are already preparing.

Look at billionaire hedge fund manager Paul Tudor Jones, for example.

In a letter to his clients, he called money in the bank a **"wasting asset."**

Stephen Roach, former chief economist at Morgan Stanley, has also issued a warning...

Saying that those who don't prepare will watch the value of their bank account **"fall very, very sharply."**

And he added: **"U.S. living standards are about to be squeezed as never before."**

He's not alone.

Billionaire Ray Dalio, the founder of the world's largest hedge fund, says: **"Cash is trash. We are approaching a limit that will be a paradigm shift."**

And now, with this urgent letter from the OCC...

It seems U.S. banks are preparing for what's coming.

So if you have a bank account with Wells Fargo, Chase, Bank of America, or HIV other banks... this is a critical moment.

Turn off all distractions and pay close attention...

Because in the next few minutes...

This former banker will show you...

How the OCC has just allowed ALL U.S. banks to offer a new type of account that could not only protect you from the mayhem...

But also help you make a fortune in the coming weeks and months.

This man already used this secret to turn $1 into as much as $1.6 million.

Unfortunately, a recent study shows that only 5% of retirees already have money in this type of account.

That means 95% are missing out.

And that's a shame because Forbes has confirmed that when all is said and done...

> "A new class of millionaires may emerge."
>
> **- Forbes**

This man has already shared this secret with a few everyday folks who follow his work... and they've reported some incredible stories.

In fact, in just a few minutes you'll hear from S.J., a hard-working American from Tennessee.

She will tell you how she went from being broke and living out of a storage locker...

This method is not for everyone. It requires some work, a little patience, and a willingness to take a high degree of risk, as you may lose some or all of the investment.

But because of its simplicity and not having to worry about retirement anymore.

All because she took advantage of this new type of account.

Here's the full story...

Hi, I'm Tasha Tewari.

I'm a former VP at a major investment bank in the U.S...

For obvious reasons, I can't mention their name...

But over the last few years, I've dedicated my life to this major change to our financial system.

I've traveled around the world discussing this with other bankers...

And they all see this coming.

I even went to the most exclusive meeting in the world...

Where President Trump, GE chairman and other U.S. billionaires met to discuss major changes to the global economy.

Including this new development.

Of course, the public is shut out of these meetings.

And that's exactly why I'm here today.

Every American deserves to know the implications of this new banking rule that was announced in this letter from the OCC.

Because I believe this will change everything.

It's creating an incredible opportunity for you to come out of this weather than ever...

In fact, I took out hundreds of thousands of dollars from my personal bank account...

And put it all in the opportunity I'll reveal here today...

Because I'm 100% confident this will be the secret everyone uses to protect and grow your wealth in the coming days.

And I'm going to show you everything in the next few minutes.

But first, it's important you understand exactly what's going on behind the scenes.

It all started with the COVID-19 pandemic

As you know, because of social distancing and lockdowns...

Our entire economy basically came to a screeching halt.

Shrinking by 32% in the second quarter of 2020. Take a look...

That was the sharpest economic contraction in modern American history.

It was 4 times worse than what we saw in 2008.

Because of this unprecedented collapse...

The U.S. Federal Reserve, our central bank, felt like they had no choice but to take drastic measures.

They promised to print unlimited amounts of money to stimulate the economy.

As the Fed president said:

> **Fed president declare: "No end in our ability to print money...and congress has told us to"**
>
> - - -

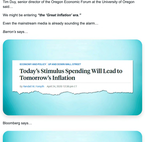
It just a few months following the COVID outbreak...

The Fed printed a little over $3 trillion.

That's more than the entire size of the UK economy, where I grew up.

And they're promising to do more.

We've never seen this level of money printing before. This *Economist* magazine cover says it all...



The truth is... We're only seen this type of money printing in periods of wars...

And the result was always the same.

World War I and II... and the Vietnam War...

Were all followed by nasty bouts of inflation...

Where everyone lost the purchasing power of "money in the bank".

And that's why many experts believe that's exactly what's about to happen now.

Peter Schiff, the CEO of Euro Pacific Capital, warns... **"The U.S. is about to experience one of the greatest inflationary periods in world history."**

Chetan Ahya, chief economist at Morgan Stanley, said: **"The driving forces of inflation are already aligned and a regime shift is underway."**

Tim Duy, senior director of the Oregon Economic Forum at the *University of Oregon* said...

We might be entering **"the 'Great Inflation' era."**

Even the mainstream media is already sounding the alarm...

Barron's says...

Bloomberg says...

> "Investors are worried that this money-printing will trigger inflation in years ahead."
>
> **- Bloomberg**

And The Wall Street Journal says...

> *Get Ready for the Return of Inflation*
>
> The world's biggest investors fear the painful return of inflation as the U.S. economy, all collaborating with
>
> "US inflation is picking up pace as consumer prices [see] the biggest increase since January 1991."
>
> **- Yahoo News**

It's already happening...

Just this past July, Yahoo news published this story...

Maybe you're already feeling this in your own life...

Maybe you've noticed you're paying a lot more at the grocery store...

Or maybe your landlord told you he had to increase your rent...

Or maybe you're struggling to pay for your kids' or grandkids' education...

Not to mention the medical bills and cost of prescriptions.

Those things are just out of control.

Is it any wonder why folks are having trouble with debt up to their eyeballs?

Then in five American adults can't even come up with $400 if they have an emergency.

All of this brings me back to this letter from OCC:

He's not alone.

Institutions like hedge funds, pensions, and endowments are already pouring up to $400 million into this type of account...

Every single week.

Think about that...

$400 million... every single week.

Do they know something that you don't?

Fidelity also reported that "financial advisors, high net worth individuals and family offices" are getting into this as well...

That's why Fidelity's investment leader, **"Institutional investment is pouring in."**

Even some public companies are now parking their cash in this new type of account, which is unheard of.

Look at MicroStrategy, a Virginia-based software company that trades on the Nasdaq.

They just a whopping $250 million in this opportunity. And they published a press release explaining their move...

"Investing in [this] asset provides not only a reasonable hedge against inflation, but also the potential of generating a higher return than other investments."

Yesterday's [this] asset provide not only a reasonable hedge against inflation, but also the potential of generating a higher return than other investments."

Even some public companies are now parking their cash in this new type of account, which is unheard of.

Look at MicroStrategy, a Virginia-based software company that trades on the Nasdaq.

They just a whopping $250 million in this opportunity. And they published a press release explaining their move...

"Investing in [this] asset provide not only a reasonable hedge against inflation, but also the potential of generating a higher return than other investments."

Yesterday's [this] asset provide not only a reasonable hedge against inflation, but also the potential of generating a higher return than other investments."

I'm personally doing the same with my own money...

Because this will not only protect you against inflation ... but will help you grow your wealth faster than anything you've seen before.

Just look what happened ever since the Fed first announced a new round of money printing:

This type of account has already gone up 137%.

Beating stocks, silver, gold, or any other investment you can think of.

Think about that...

You could have already more than doubled your money.

No wonder a recent survey published by Forbes...

Showed the majority of people who opened this type of account said their financial situation IMPROVED during the COVID pandemic.

That's why I want to show you exactly how to open this account.

It's very simple.

You don't even need to go to your local bank or even talk to anyone.

You can do everything online ... and you can start with as little as $50.

But you do need to have an open mind ... because this is a relatively new way of protecting and growing your wealth.

You'll also need to act quickly.

In short, there's a big announcement that could accelerate this entire trend.

There's not much time left.

And that's not just me saying that.

Stephen Roach, former chief economist at Morgan Stanley, is on record saying the U.S. dollar could crash 30%.

He wrote:

"Already stressed by the impact of the Covid-19 pandemic, U.S. living standards are about to be squeezed as never before. A crash in the dollar could well be in the offing. It's going to feel very, very painful."

Look, for decades we've heard rumors of a dollar crash...

And I've never believed them, until now.

And the reason is ... until now no one has seen anything quite like this. It was unique is now underway.

And happening so fast, it's breathtaking.

Take a look at this chart of the U.S. dollar against other currencies.

Ever since the Fed announced unlimited money printing, the dollar has been in free fall.

Which is why leaders moving in your bank account is the worst possible decision you can make with your money.

So what should you do now?

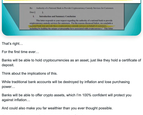
Well, let me give you all the details behind this DCC move...

Because like I mentioned before... this isn't just about inflation.

It's a much, much bigger story.

This is about a revolution that's going on in our financial system.

As you can see in the letter, it says...



That's right...

For the first time ever ...

Banks will be able to hold cryptocurrencies as an asset, just like they hold a certificate of deposit.

Think about the implications of this...

While traditional bank accounts will be destroyed by inflation and low purchasing power...

Banks will be able to offer crypto assets, which I'm 100% confident will protect you against inflation.

And could also make you far wealthier than you ever thought possible.

I'm sure you've heard of cryptocurrencies like Bitcoin...

And if you're still skeptical. Look I can't blame you.

The clueless media has confused Americans in recent years.

For example...

In late 2015, Financial Times called Bitcoin a *"pyramid scheme."*

Around the same time, The Washington Post declared *"Bitcoin isn't the future of money"*

I even found an article with the headline *"Ten reasons why you not should not care about Bitcoin."*

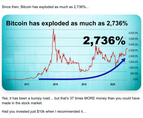
Look, I know the media sets just clueless about digital currencies...

So instead of listening to them...

I recommended Bitcoin when it was trading around $400.

Check this out...

Since then, Bitcoin has exploded as much as 2,736%...



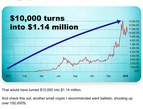
Yes, it has been a bumpy road... but that's 37 times MORE money than you could have made in the stock market.

And you invested just $10k when I recommended it...

You'd have up to a whopping $263,600 today.

And that wasn't even my biggest gain in the crypto space.

Another crypto I spotted soared 71,739%.



That would have turned $10,000 into $1.14 million.

And check this out, another small crypto I recommended went ballistic, shooting up over 150,000%.

Enough to turn just $1,000 into more than $1.5 million, which is unheard of.

If all this sounds too good to be true... keep in mind... this actually already happened.

I already personally turned just $1k into as much as $1.5 million.

That's why in just a moment, I'll show you how you can get into my top 3 small crypto picks for 2021... even if you know nothing about cryptocurrencies.

Last time, several of my readers wrote to tell us how they became millionaires buying those smaller cryptos.

I'll tell you how from one of them in just a moment...

Because you could be the next success story.

The truth is ... as big as those gains were...

It's nothing compared to what's coming.

We all know how Economics 101 that when prices rise, people buy more.

If you have declining supply and increasing demand ...

*****The price is mathematically guaranteed to go higher.**

That's a law of economics...

It's as certain as gravity.

And that's exactly the situation we have today with Bitcoin. You see...

The problem with the dollar is there are too many of them.

Like I showed you earlier, we're witnessing a historic experiment with our currency with the Fed printing trillions like never before.

As expert on the Federal Reserve Peter Schiff Brown says, *"America has never seen anything like it."*

Bitcoin has no over problem of course... there aren't enough to go around.

As a digital currency, the supply of Bitcoin is divided by a computer code.

Each year, by design, fewer and fewer bitcoins are released to the public.

And that should push the price higher.

Here's how Forbes explained...

> "In terms of value, the price per unit should increase as the supply decreases. Now, more than ever, inflationary hedges are important. Bitcoin might play part of this role for the 21st century, as gold did for the 20th century."
>
> – Forbes

Think about that...

While our central bank is printing trillions of dollars, increasing the supply of dollars like never before...

Bitcoin's supply is GUARANTEED to decline.

Which means the vast majority of people ... who hold their savings in cash ... are being robbed.

While the small fraction who hold wealth in Bitcoin are making a fortune.

That's why Fortune Capital wrote a note to its clients saying...

> "Get out of paper money and into bitcoin!"
>
> – Fortune Capital Research, Bitcoin Is Ready to Explode, Fortune Capital, 2019

Entrepreneur magazine wrote:

> 8 Reasons Why This Could Be the Time to Take Bitcoin Seriously
>
> – Entrepreneur, 8 Reasons Why This Could Be the Time to Take Bitcoin Seriously, Entrepreneur, 2020

Citing inflation hedge as one of the main reasons, they concluded: *"Give thing is certain: Bitcoin and digital currencies are here to stay."*

They're not only here to stay...

But they're also going to make a few Americans very, very rich in the coming months and years.

You see, since the supply of Bitcoin is pre-programmed...

We know what the supply will be in the future.

So we can actually project future price ranges.

According to one model known as Stock-to-Flow...

Bitcoin could hit $100,000 sometime in the coming months and $1 million per token within the next four years. Take a look:

Of course, this is just a projection...

But notice how the model has tracked the actual range of prices for Bitcoin pretty well so far.

That's why Forbes wrote this could be...

> "The beginning of the next 18-month bitcoin price cycle that puts bitcoin at almost $100,000."
>
> – Forbes

In other words, according to this model...

We're talking about the potential to almost 10x your money by next year.

And believe it or not...

That's a conservative estimate.

Venture capitalist and billionaire Tim Draper believes the price of Bitcoin will hit $250,000 by the end of 2022.

According to his projection, if you invest $10k right now in Bitcoin...

You could cash out with as much as $208,333 in the next couple of years.

Most Americans don't even have that much saved for retirement.

And yet...

That could be just the beginning.

Former Goldman Sachs fund manager Raoul Pal is even more confident. He tweeted:

And he said the devaluation of the world's currencies will cause the price of Bitcoin to rise 50x to 100x in the next five years.

If he's right, it means you could invest $10,000 today...

And cash out with anywhere from $500,000 and $1 million in five years.

Look, I know all these numbers sound crazy...

And most people won't believe it.

I know that because last time I recommended cryptos, most people didn't believe me either.

But the few who did, had the chance to become millionaires.

They reported they got rich by buying smaller cryptos that were trading for pocket change...

The same type of cryptos I'm going to tell you about in just a minute

But you better act fast because institutional investors are buying everything they can...

You see, I just explained to you the supply side of the equation.

But there's also the demand side...

And that's picking up the we've never seen before.

I know this because I've met with all the big players in the space...

Including Vitalik Buterin, the creator of Ethereum, one of the most popular cryptocurrencies.

I met with one of the richest men in crypto in Toronto.

I met with professors with an executive in one of Asia's billion dollar crypto exchanges...

And with a Silicon Valley legend, the venture capitalist behind both PayPal and SpaceX.

And they all see mass adoption of crypto assets coming.

I mean, today the entire crypto market capital is only worth about $270 billion.

And right now, 50-60 million people own crypto.

That's 0.6% of the world's population.

So we're still in the early stages of adoption.

We'll see hundreds of millions (and possibly billions) of people flood into this space in the coming months and years.

Let me just show you how quickly things are changing...

Back in 2016, some people bought crypto using their bank accounts closed for buying crypto.

In 2018, there wasn't a bank in all of Puerto Rico that would let me open an account because I was writing about crypto.

Today, every major institution that matters has already embraced Bitcoin, even the ones that thought Bitcoin was just a scam.

Take JP Morgan, for example.

Just a couple of years ago, its CEO, Jamie Dimon, called Bitcoin **"a fraud."**

Now, his bank has accepted two Bitcoin exchanges, Coinbase and Gemini, as clients.

Their research team is advising their clients to add cryptocurrencies to their portfolios.

And they even launched their digital currency called the JPM Coin.

The truth is...

After many years of resisting, institutions are finally accepting crypto as yet another asset class.

Worthy of being held alongside stocks and bonds.

I already showed you how big institutions like hedge funds, pensions, and endowments are already pouring up to $400 billion into cryptos...

Every single week.

That's why Fortune wrote...

> "Institutional adoption of bitcoin is here"
>
> – Forbes

This is going on across the entire financial industry.

For example, all Sears & Kmart brick-and-mortar mobile payments company based in San Francisco.

They allow individuals and merchants to accept offline debit and credit card payments on their smart devices.

Maybe you've seen this key-square-shaped phone plug-in.

Today, more than 64 million businesses around the world rely on Square's cashless system. And they're embracing Bitcoin.

In its latest earnings report, Square's Cash App reported $875 million in Bitcoin revenue – a 600% increase from the previous year.

Analysts suggest that PayPal plans to roll out crypto trading to its 325 million users.

Robinhood Crypto offers commission-free trades on seven crypto to its 10 million users.

Even Mastercard and Visa recently announced projects and collaborations involving crypto.

And look at Fidelity, the largest provider of 401(k) retirement plan services.

They just launched their first Bitcoin fund. They released a statement saying

> "Fidelity has made a long-term commitment to the future of blockchain technology and to making digitally-native assets, such as Bitcoin, more accessible to investors."
>
> – Fidelity

Think about that...

Fidelity has over $7 trillion in assets under management.

Imagine what that will do to Bitcoin if some of that money starts moving into crypto?

It doesn't get more mainstream than that.

This new OCC rule will just accelerate that process and open the floodgates.

You see, the bulkiness of money big investment funds don't allow them to park money outside federally chartered banks.

But, now, they can have their cake and eat it, too.

This new OCC rule changes all of that.

As Fortune said: **"The capital in that big banks now have a green light to open crypto operations."**

That means we could see billions and billions of dollars flowing into the crypto space.

As Yahoo Finance says: **"This is a huge step towards the mass adoption of cryptocurrency as it potentially opens the asset class up to millions of people in the mainstream."**

Banking expert Sarmad Gangjee said... This move from the OCC "**is another huge step towards mainstream institutionalization and retail access to cryptocurrencies."**

What do you think is going to happen when all this new money starts to flow into Bitcoin and these smaller cryptocurrencies?

You don't have to be a genius to figure this out.

The U.S. banking system alone holds north of $20 trillion in assets.

If bank customers allocate just 1% of their accounts to Bitcoin... Bitcoin's market cap would double.

That's why cryptocurrency research firm Messari wrote recently: **"It won't take much of an institutional allocation until $50,000 bitcoin is back on the table."**

Here's another way of looking at it...

If global investors reallocated just 5% of their financial assets to Bitcoin that would be $14.7 million in increased demand.

That alone is enough to push Bitcoin 125 times higher.

Think about that...

That's enough to turn a small investment of $5,000 into a whopping $625,000.

Institutional investors already pouring up to $400 million into crypto every week, thanks to this news.

It's truly a once-in-a-lifetime opportunity.

Once it's gone, it's gone forever.

So how can you get started?

Well, I recommend you take 3 steps right now...

Step #1: Buy Bitcoin Today... do NOT wait a single day

As you can see, according to these projections you could make a fortune from Bitcoin in the coming months.

And the longer you wait, the more money you're leaving on the table.

In fact, the Federal Reserve is scheduled to make an announcement in just a few days.

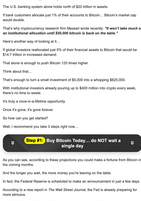
According to a new report in *The Wall Street Journal*, the Fed is already preparing for more stimulus.

If they announce more money printing or any type of "easy money" policy...

It could send crypto soaring higher.

Just what happened back in March, when the Fed announced it would print money.

Bitcoin started a 148% run.



Crazy right?

I don't know what you're doing with your money...

But I bet you're not seeing that kind of return.

That's why I recommend Bitcoin to anyone who wants to protect and grow their wealth in the coming months and years.

Remember, based on the most conservative estimate I showed you earlier...

Bitcoin could almost 10x your money in the coming months.

And if you don't know anything about crypto, do NOT worry.

Because I've recorded a crypto master course for you.

Explaining everything you need to know.

And I'd like to give you access today.

To my knowledge, this is the only video series of its kind...

And it will help you get you up and running in minutes.

Despite Bitcoin being the hottest asset of 2020...

There's a lot of people still trying to get in the sidelines...

Simply because they don't know how to get started.

And that's a shame because I'm convinced crypto will mint millionaires in the coming months.

I don't want you to be left out. That's why in this video series, I'll teach you...

- How to get started with as little as $100. (Yes, even though Bitcoin is trading above $10,000... I'll show you how to buy your share for as little as $100.)
- How to open your account online with a reputable crypto broker... (It's way easier than you think.)
- How to place your first crypto trade. (If you can buy a stock, you can do this.)
- And much, much more.

Well's sick you through it step by step, so there will be no guesswork.

When you're done with the course, you'll be ahead of 99% of Americans.

I'll tell you how to claim your course in just a moment.

But first let me show you the second step I recommend...

Step #2: Buy my top small crypto picks for 2021

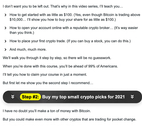
I have no doubt you'll make a ton of money with Bitcoin.

But you could make even more with crypto altcoins that are trading for pocket change.

Back with a lot's happening this year alone.

Yes, Bitcoin is up big...

But a tiny crypto called Cardano is up as much as 476% since March 2020.



These explosive gains are only possible because many of these smaller crypto trade for cents on the dollar.

Cardano for example is still trading at 11 cents on MTGX that major rally

That means it just needs to go up another 11 cents and BOOM.

You double your money.

Or look at another smaller crypto called VeChain.

It's up as much as an incredible 823% since March.

That means had you invested just $1,000 a few months ago...

You'd be up as much as $9,230.

To put that in perspective, that's 31 times MORE money than what you could have made investing in the S&P 500 index...

Or look at another small crypto called Chainlink.

It's up as much as an incredible 1,019% since March.

I mean, normally you'd have to wait years...

Sometimes even decades to see those types of gains.

And yet, you could have already made 10 times your money just in the last few months with this tiny crypto.

But here's what's really incredible...

As amazing as these gains are, they're not even the top performers.

Not by a long shot.

Check this out. This is just unbelievable.

In my 30 year career, I've never seen anything like this.

Some of these cryptos are up as much as 1,862%... 5,945%... and even 9,000%...

And that's just over one week.

That's just insane...

Because had you invested just $1,000 in each of those a week ago...

Today you would have a little more than $223,000.

Think about that...

That's almost a quarter million dollars.

In just one week.

Can you see now how some of my followers reported turning a small amount of money into millions?

That's why I put all the details on my top 3 big crypto picks for 2021 in my new book **Blockchain Millionaire: How to Turn $475 into $1 Million With My Top 3 Small Cryptos for 2021**

I'd like to give you access right now...

Because they each have the potential to 10x your money by next year...

And based on what already happened to some of my readers, I'm being very conservative.

In fact, let me play a clip for you right now.

I want you to meet B.J., because she said she turned $12k into over $1 million just in 18 months...

And her story is just incredible. Check it out...

B.J.—$12k to over $1 million in 18 months

"The mastermind Nicole described in Bitcoin Millionaire was her original mentoring in cryptocurrency and she helped me perform my high degree of success. I'm now a full-time trader and a full-time mastermind."

Incredible, right?

Now, keep in mind that all investments carry risk...

And past performance does not equal future success.

I think we all know the crypto market can be extremely volatile, right?

That's why I only recommend you put a small part of your portfolio into crypto.

Because there's no need to bet the farm on this.

You see, the secret here is many of these cryptos are trading for pocket change...

So even if you're starting with a few hundred dollars, it could still be life-changing.

Look, I know you probably get bombarded with promises of riches all the time.

And most of them are all BS.

But what I'm talking about ALREADY happened to a few folks.

It's already a reality for them.

So it absolutely can happen to you too...

Because with explosive gains like these, even a small amount of money could be enough to fund your entire retirement.

Again, all the details on these cryptos are inside this report called **Blockchain Millionaire: How to Turn $475 into $1 Million.**

I'll show you how to claim this report in just a moment.

First, there's still one more step I recommend you take right now.

Step #3: Invest in the technology that's making all possible

I'm sure you've heard of blockchain, the technology behind cryptocurrencies.

What you might not know is that Bitcoin was just the first application of that tech.

It's much, much bigger than that.

And why Forbes calls it **"The biggest disruptor in technology since the 1990s."**

PricewaterhouseCoopers cites this technology as **"Once in a generation opportunity."**

And CNBC reports: **"The next five years may be about an intense and treaty as the 1990s. This technology will be the biggest thing since the internet itself."**

So what's the big deal about blockchain?

We all have facts and information we don't want accessed, copied, or tampered with.

But on the internet, there's always a chance it could be hacked or modified.

Blockchain solves that problem because it's a virtual ledger capable of recording and verifying a high volume of digital transactions.

It's a bedrock we know aren't changing once we put something on it...

And once a transaction will be verified only if it follows the rules.

That's why this tech will disrupt several industries, including banking, real estate, gaming, healthcare, transportation, etc...

And it's why the World Economic Forum says this is a website 295 TIMES by 2027.

Bottom line...

Investing in early stage blockchain stocks today is like investing in internet stocks back in the early 2000s.

Like Microsoft...

Amazon...

And Google...

Just $1,000 invested in each of those tools from those stocks have turned into $156,000.

That's the potential we have once again with blockchain stocks.

And to make it easy for you...

I already did all the research and found the top players that are driving this revolution.

And I put all the details inside another report called **Big Tech Plays for Blockchain's $50,000% Revolution.**

I'd like to give you access to this report right now.

So How Can You Get Started Today?

Well, I could just give you all the information and walk you good luck.

And I'm sure you'd do very well.

But with the Fed printing money like never before...

And with institutional investors buying crypto like never before...

I'd like to step in touch and guide you every step of the way during this historic opportunity.

You see, earlier in my life, I went through a lot of financial difficulty... and I don't want anyone else to go through that.

I grew up in Britain's foster care system.

I lived in a cramped, unheated room on top of a garage. Some nights were so cold I couldn't even sleep.

I knew in my heart: "there has to be more to life than this."

So when I was 16, I left for America.

With $150 in my pocket, I set off to New York City because I wanted to work on Wall Street.

Within 2 years of landing in America, I went from flipping burgers at a Roy Rogers and working at a loading dock to an entry-level position at a major U.S. investment bank.

By age 20, I became the youngest VP in the firm's history.

But the higher I rose through the ranks… the wealthier I got…

The more I noticed how Wall Street was rigged… and it was designed to make the rich get even richer.

With my blue collar background, this didn't resonate well with me…

So I decided to leave everything behind…

And joined an independent financial research firm to share my insights with Main Street Americans.

I wanted to help folks find ways to retire early, pay off their mortgage, pay for their kids' or grandkids' tuition, buy a new house…

Or whatever their dreams were.

And so far, we've done a great job.

You see, all the folks I mentioned before, including the one who have become millionaires…

Follow my work every month in a special publication called *The Palm Beach Letter*.

Today I'm inviting you to take a risk-free subscription and join us.

The moment you do, I'll give you access to everything I've mentioned so far.

In each issue, I'll explain the biggest trends in the markets and select my #1 investment for that month…

It could be a stock. An income play. Or some other, little-known alternative I discovered while doing my boots-on-the-ground research.

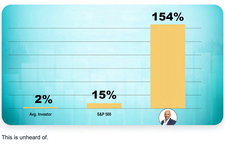
I'll do all the work and just hand you all the information you need to decide if you want to participate.

I'll tell you what to buy, what price to pay, and how much money I expect you to make.

Since I took over the reins of this publication in 2016, we've averaged 154% per year.

That's 10 times better than the S&P, at record highs….

And 81 times MORE than the average investor.



This is unheard of.

To put that in perspective, the best hedge fund in the world is The Medallion fund…

Which has been called "a $74 billion money-making machine like no other."

It has averaged a 66% annual return, before fees, from 1988-2018.

Because of this incredible performance…

They charge a 5% annual flat fee plus 44% of the profits, the highest fee on Wall Street.

That means if you invest $10,000 with them…

In a typical year, you'll have to pay them $3,404 in fees.

Why am I telling you all this?

Because we're performing even BETTER than them…

So if I charged $3,000 for my research it would be a bargain.

But I'm not publishing my research to rich institutional investors.

I'm publishing it to everyday folks like you.

For that reason, we sell subscriptions to *The Palm Beach Letter* on our website for $199.

That's per year. Not per month.

The Palm Beach Letter

The Palm Beach Letter is our flagship investment advisory. In this advisory, editor Teeka Tiwari will only recommend safe, recession-proofing assets like dividend-paying stocks that fit into our overall wealth-building strategy. We also will not recommend any investment in the cryptocurrency sector, or speculations like cryptocurrencies, share hedge fee gold, and all Wall Street Ideas like tax loss investing.

Learn More About JTPBL

When you consider that many *Palm Beach Letter* readers have had opportunities to become millionaires by following just one of my recommendations…

I think you'll agree $199 is a fair price.

But because you probably don't know me yet…

I understand I need to earn your trust first.

So I'm going to give you a special discount today.

But before I give you all the details, there's one more report I'd like to give you as a gift when you take this risk-free subscription…

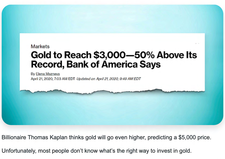
My #1 Way to Own Gold

It's no secret that gold can also help you protect against inflation.

It's why in 2020 Goldman Sachs told its clients to load up on gold, saying…

"We have long argued that gold is the currency of last resort, acting as a hedge against currency debasement."

Bank of America is recommending the same, predicting a 50% jump.



Billionaire Thomas Kaplan thinks gold will go even higher, predicting a $5,000 price.

Unfortunately, most people don't know what's the right way to invest in gold.

They simply buy the ETF GLD, which is a very popular fund that tracks the price of gold.

But that's NOT what I recommend…

Because that fund doesn't give you ownership of physical gold.

But I found a way for you to own physical gold with just one click from your computer or phone…

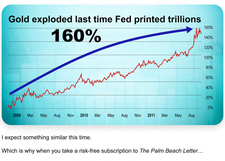
A way for you to own physical gold right from your online brokerage account.

That way, you don't have to worry about storage, coin premiums, or finding a reputable broker.

You can even buy it and hold it in an IRA — or a Roth IRA… where your capital gains won't be taxed.

Plus, you can opt to take delivery of your gold at any time, as long as the amount you want is greater than the minimum redemption amount.

Remember, when the Fed announced money-printing back in 2008, gold exploded higher.



I expect something similar this time.

Which is why when you take a risk-free subscription to *The Palm Beach Letter*…

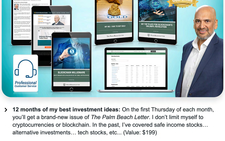
I'll also give you this FREE report called **My No. 1 Way to Own Gold.**

It will walk you step by step through how to buy physical gold from your online brokerage account.

And when I say "risk-free subscription," I mean it.

You can take a look at my research and receive everything I've mentioned so far, at no risk to yourself.

Simply take a risk-free subscription, and I will immediately send you:



- **12 months of my best investment ideas:** On the first Thursday of each month, you'll get a brand-new issue of *The Palm Beach Letter*. I don't limit myself to cryptocurrencies or blockchain. In the past, I've covered safe income stocks… alternative investments… tech stocks, etc… (Value: $199)
- Bonus #1: ***My Crypto Master Course*** will take you from newbie to a pro in no time. (Value: $99)
- Bonus #2: ***Blockchain Millionaire: How to Turn $675 into $1 Millionwith My Top 3 Small Cryptos for 2021.*** (Value: $199)
- Bonus #3: ***My Top Plays for Blockchain's 295,000% Revolution*** (Value: $199)
- Bonus #4: ***My #1 Way to Buy Gold***, which will show you how to own physical gold with a few clicks online. (Value: $99)
- **Full support**. Our specialists are located in Delray Beach, Florida. Please feel free to call or email them for any help you need with your subscription. (But please note, they cannot provide any individual investment advice.)
- **Access to our one-of-a-kind model portfolio**. Like I showed you before, *The Palm Beach Letter*'s model portfolio has crushed even the best hedge fund in the world.
- You'll also get full, 24/7 access to our members-only website…

That's a total value of $795.

But today only, you don't have to pay anywhere near that.

A subscription to *The Palm Beach Letter* is only $49 for the entire year.

That's 13 cents a day.

Why so affordable?

Let me be clear….

This price is low enough to make this a no-brainer for you…

And it's enough to cover the costs of keeping this page online.

My publisher will most likely not make a profit on this offer.

But that's OK, because once you start seeing gains with cryptos and all the opportunities I present in the pages of *The Palm Beach Letter*…

I'm confident you'll stick with me for a long time.

And I don't want your money if you're not 100% happy.

That's why when you sign up for *The Palm Beach Letter*, I'll give you 60 days to test out the service — at no risk to you.

And if during that customer satisfaction period you find that you're not getting life-changing information…

Or for any reason at all…

You can simply call our customer service team and cancel your subscription.

We'll give you a full refund, no questions asked.

And we'll let you keep everything you receive as a subscriber — at no charge.

You can keep all the issues…

You can keep all the special reports…

You can keep everything.

This means that there's no risk to you at all.

It's our way of saying thank you for giving *The Palm Beach Letter* a try.

To get started, simply click on the button below.

It will take you to a secure order form, where you can review everything one last time before you join.

Look, right now you're at the same crossroads as B.J., before she started following my work.

As you heard from her, she was broke and had no hope for a comfortable retirement.

Everything changed when she started following my recommendations.

Today she's literally a millionaire and no longer has to worry about retirement.

You're facing the same fork in the road…

You can pretend you never saw this information and go on with your life…

Or you can take action today to change your future.

This is a once-in-a-lifetime opportunity.

The mass adoption of cryptocurrencies will only happen one time.

If you miss this, there will never be another chance.

I'm sure you'll make the right decision for you and your loved ones.

I look forward to welcoming you to *The Palm Beach Letter* in the next few minutes.

I want to thank you for listening…

And always remember…

Let the game come to you.

Teeka Tiwari
