Tech Millionaire Reveals Silicon Valley's Dark Secret

Why You'll Never Get Rich on the Tech Boom

"I've made guess like 1,620%, 3,900%, and 4,144% on the technology bull market... You've seen it yourself. If you've even made a fraction of that. But right now, there's a brief window for you to join me—or miss out forever."

INSIDE: The 3 Most Valuable Technologies You've Never Heard Of

This technology bull market has been good to me. I've become a millionaire many times over, booking gains as high as 1,214**%**.

1,620%.

And 3,900%.

Another one of my investments soared 4,344%.

That's enough to turn a $5,000 investment into $220,000.

Imagine...

A couple of investments like this and your retirement is paid for.

But I've noticed something disturbing about this tech boom.

Most regular Americans are missing out.

I'm in 4 Americans on average other 5 today — despite a soaring decade long bull market.

And more than half of American households have no emergency savings...

AARP	FORTUNE
"Most Americans can't cover a $400 emergency." Sorry, Americans are broke.	"A Shocking 6 Americans Can't Afford Even $400 Cash." Why are Americans so broke?

Sure, some folks were lucky enough to double their money on Netflix...

Or ride the Nvidia bull for a 1369% gain over the last 5 years.

That pales in comparison to what insiders like me are taking home...

The kind of money that can give you peace of mind and security.

But let me assure you:

This is not your fault.

There's no way you could've known about the valuable breakthroughs behind these huge gains.

I heard about them long before you — or anyone in the general public — even knew they existed.

It's because of something I call "Tech Lag."

"Tech Lag" destroys your chance to profit from technology stocks.

And there's only one way to beat it...

My name is Jeff Brown.

I'm a former tech executive for companies like Qualcomm and NXP Semiconductors.

I'm an angel investor with a stake in dozens of tech startups.

I have professional certificates from Stanford and MIT.

I'm an alumnus of the Yale School of Management.

And I've served degrees from London Business School and Purdue's famed Aeronautical and Astronautical Engineering program — the same one that produced Neil Armstrong and dozens of other astronauts.

I've devoted my entire life to technology...

And I have a confession to make...

The game is rigged against you...

Tech investing is an insider's game.

There are new technologies...

On the verge of huge breakthroughs today...

And the general public has no idea

They lately aren't first out until years later.

This is what I mean by Tech Lag.

Insiders like me see and hear about valuable breakthroughs in real time.

Years before you and the general public...

And because we understand the future value of these technologies immediately, we invest long before the crowd.

We reap all of the gains.

For instance, when did you first hear about self-driving cars?

Maybe you read something about it in the last couple of years.

Most Americans still don't see it as a viable technology.

Even the believers have no idea which companies to invest in.

But I first sat in a self-driving car nearly a decade ago. In 2011.

It was one of Google's early prototypes...

I got to take a peek during a visit to NASA's Ames campus, right down the street from the Googplex.

I instantly understood the technology behind it...

And the impact self-driving cars could have on our future.

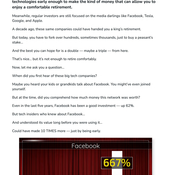
That's why back in 2016, I held a small group to invest in a then-unknown company called Nvidia.

Nvidia's semiconductor chips had only been used for gaming up to that point.

But I saw its potential use in artificial intelligence — the backbone of self-driving technology.

And since my recommendation, the stock soared as much as 2,080%.

Just a few months ago, Jim Cramer finally listed Nvidia as a "buy." And many regular investors piled in.



They've done pretty well... up 18%.

***But** tech insiders like me saw the chance to make 12 times more...*

Because we knew about the technology years ahead of time.

This is "Tech Lag" at work... dragging down your potential returns.

Here's another example:

You've probably heard of blockchain technology and cryptocurrencies.

Maybe you even got into Bitcoin recently and doubled or tripled your money.

You might even have jumped into a couple alternative coins like Ether or Ripple and made even more.

But I learned about blockchain years before you did...

And I invested in an early funding round for Ripple Labs — the company behind Ripple.

I made nearly 4,000%.

This is how Tech Lag takes money off the table for regular folks.

Because only people in the Silicon Valley Inside know about these technologies early enough to make the kind of money that can allow you to enjoy a comfortable retirement.

Meanwhile, regular investors are still focused on the media darlings like Facebook, Tesla, Google, and Apple.

A decade ago, these same companies could have handed you a king's retirement.

But today, you have to fork over hundreds, sometimes thousands, just to buy a passout's stake...

And the boost you can hope for is a double — maybe a triple — from here.

That's nice... but it's not enough to retire comfortably.

Now let me ask you a question...

When did you first hear of those big tech companies?

Maybe you heard your kids or grandkids talk about Facebook. You might've even joined yourself.

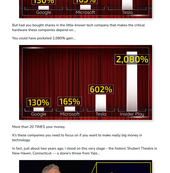
But at the time, did you comprehend how much money this network was worth?

Even in the last five years, Facebook has been a good investment — up 62%.

But tech insiders who knew about Facebook...

And understood its value long before you were using it...

Could have made 10 TIMES more — just by being early.



You probably get used to Googling things on the Internet in the last decade...

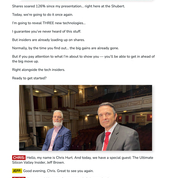
But while you were Googling local restaurants, did you understand the value of that technology to the stock market?

Maybe you did and were one of the first people you knew to buy shares in Alphabet, Google's parent company.

If you bought in 2015, you'd have a solid 130% gain.

But tech insiders understood Google's worth long before you even knew what "Googling" was.

And they had the chance to make 3,040%.



23 TIMES more than mom and pop traders.

Same with Amazon. Maybe you bought something online or received a package via Amazon years ago.

But did you know the true value of the technology behind their platform?

Investing in Amazon three years ago, as the bull market rose, would've returned a nice 198% gain.

But tech insiders who invested in Amazon long before you ever searched their website made over 8,960%.

45 TIMES more.

Enough to turn $10,000 into $906,000.

This is how you retire early.

And this is what you're missing out on because of Tech Lag.

So how can you overcome Tech Lag?

How can you learn about these new technologies ahead of time?

How can you invest in these valuable companies before the general public knows about them?

There's only one answer...

With the help of an insider like me.

And in a moment, I'm going to pull back the curtain and show you THREE new technologies you've likely never heard of.

These are the technologies of tomorrow...

The companies I believe could book a fortune in the next stage of this technology bull market.

These are the companies tech insiders like me are buying now — while they're still cheap.

But first I want to show you one more way the experts beat regular investors.

It's a simple thing... but it totally most Wall and Pop investors back from truly life-changing profits.

They're buying the wrong companies!

Most regular investors are conditioned to buy the big names — the ones the media reports on daily.

Google... Microsoft... Tesla...

Meanwhile, the insiders like me are buying another set of companies.

The smaller, lesser known companies who make the critical parts that run the bigger companies' platforms.

These are the companies with a much higher ceiling.

They profit as the big companies profit.

But they're much smaller.

They have a real chance to go up 5, 6, or even 10 times more than the big names tech companies.

For example, had you followed the crowd into popular names like Google, Microsoft, or Tesla, you'd have done pretty well.

Up 130%, 165%, and 602% respectively...

But had you bought shares in the little known tech company that makes the critical hardware these companies depend on...

You could have pocketed 2,080% gain...

More than 20 TIMES your money.

It's these companies you need to focus on if you want to make really big money in technology.

In fact, just about two years ago, I stood on this very stage — the historic Shubert Theatre in New Haven, Connecticut — a scene's throw from Yale.

And I showed people a key piece inside Apple's new 5G iPhone.

To my knowledge, it was the first time this technology had been shared with the public.

The video soon went viral, picking up more than 11 million views.

In this video, I told the crowd about a completely unknown company who made this special part.

Shares soared 126% since my presentation... right here at the Shubert.

Today, we're going to do it once again.

I'm going to reveal THREE new technologies...

I guarantee you've never heard of this stuff.

But insiders are already loading up on shares.

Normally, by the time you find out... the big gains are already gone.

But if you pay attention to what I'm about to show you — you'll be able to get in ahead of the big money.

Right alongside the tech insiders.

Ready to get started?

CRAIG: Hello, my name is Chris Hunt. And today, we have a special guest. The Ultimate Silicon Valley Insider, Jeff Brown.

JEFF: Good evening Chris. Great to see you again.

CRAIG: Now, to quickly recap for anyone who's just tuning in...

Jeff is a technology executive with more than three decades of experience at places like Qualcomm and NXP Semiconductors...

And he's an angel investor with stakes in dozens of promising startups.

Not even more impressive is Jeff's ability to pick out massive winners ahead of the crowd.

As promised, Jeff is going to read FIVE "insider" technologies.

Sadly, because of the coronavirus pandemic, we couldn't open the door to the public for today's big reveal.

Instead, we've invited a few lucky guests to join us on the inside...

We're sitting just behind the curtain as well.

According to Jeff, what you see over the next few minutes could make you a fortune in the coming months.

JEFF That's right, Chris.

Now is the most exciting time to be a technology investor. We're seeing breakthroughs happen at the fastest rate in history.

And the three breakthrough technologies I'm going to share today are on the verge of massive breakouts.

CHRIS What do you mean by bleeding edge?

JEFF The bleeding edge is where true innovation happens.

These are new technologies — in their earliest stages — that have the potential to redefine entire industries.

These are not mere technological improvements — they're incredible leaps forward.

They may sound like science fiction. But I promise you. These technologies are real and approaching major mainstream breakthroughs.

Yet most Main Street folks have no idea they exist...

CHRIS They'll find out today!

JEFF That's right.

Today I'm going to share everything.

I'm going to show you — and interview watching — three early-stage technologies

And I'm going to show you how to get in — right alongside the top tech investors on the planet...

Because, when you get into these companies from the very start,

The profit potential is enormous.

CHRIS I can't wait to hear more.

And I'll bet you guys can't wait either.

Before we get started, let's take a second to welcome the audience.

Today we're invited 3 special guests who were born with or who Jeff revealed a critical piece of Apple's 5G iPhone.

And we're going to allow each of them to ask Jeff about today's most exciting technologies.

Our first guest today is Laura, from Illinois.

LAURA Jeff, My question is about COVID-19. It's disrupted my life and changed so many things for most people I know.

And it's got everyone concerned about their health and diseases.

Is there a technology out there that could help us prevent diseases in the future?

JEFF Great question.

We're a global health crisis on our hands, what's happening in the tech industry to help us stay healthy?

YES! COVID-19 has brought out the best in the tech industry

We're seeing technologies applied in new and novel ways to stop the coronavirus.

The New York City subway system is now piloting a program to use ultraviolet technology to sanitize the tracks. This will make commutes safer for the millions of people who depend on it to get to work.

And we're using AI (artificial intelligence) and thermal scanning technologies to stop outbreaks in near-real-time.

Drugs are being developed at the fastest pace in history.

And biotech stocks — especially those working on a cure for COVID-19 — are soaring.

CHRIS And it's quickly become one of the biggest investment stories of the year.

In just three months, HC investors have poured more than $8.4 billion into biotech bets.

Forbes calls it a "Funding Tsunami."

And companies in the space have been absolutely soaring.

Moderna is up 271%.

Sorrento popped 456%.

And Novavax raced up 2,540%...

JEFF And that's just the tip of the iceberg. All told, we've seen over $34.6 billion invested in biotech this year.

But there's more to the story than you'll find on the front page. Chris.

While biotech is finally getting "hot" in the public's mind,

Investors in the know — like myself — were positioned...

Before the surge of money.

And now, we're moved on to the next breakthrough...

The next blank canvas where all the gains are still ahead of us.

And to Laura's question, there is one technology out there that goes far beyond biotech.

I'm talking about something so radical it could end the pharmaceutical industry as we know it.

We're no longer need their expensive cocktails of imprecise drugs... Many of them with drastic side-effects.

Our healthcare system will finally be able to breathe — no longer weighed down by prescription drug costs.

Americans will live better, longer lives than they do now.

CHRIS Are you telling me there is a technology that will replace drugs?

JEFF It's not that anything will 'replace' them. It's that they'll become obsolete.

Chris, I'm going to make a bold prediction here.

If you can remain healthy for another 5-10 years...

Technologies will exist that will help you live an active life — well into your hundreds.

CHRIS That sounds almost unbelievable. I'm stunned.

JEFF It's good to be a skeptic.

If I hadd it my way, these breakthroughs would be all over prime time.

But frankly, most people won't find out early enough to profit from this life-changing technology.

CHRIS So what are the best investments in this space today? What companies are you most excited about?

JEFF Well, Chris, as you can imagine, as this industry booms over the next few years, there will be many, many winners.

I've zeroed in on one opportunity I think could be explosive. This is truly a company only tech insiders like me know about.

If you get in before these breakthroughs become public, the gains can be extraordinary.

CHRIS Yes, we had our analysts find some examples. Can we show them on screen?

Here we go...

On Kodiak Sciences, had you bought in on March 18th — the absolute best day to buy in this year — you could have made 183%

But insiders had the chance to make nearly 8 TIMES MORE!

CHRIS Why do it happen?

When we're talking about "insiders," we don't mean people who own the company Or people with illegal, insider knowledge of company operations.

We simply mean people who work and operate in the futuristic bubble of Silicon Valley

These technologies "insiders" hear about valuable breakthroughs in real time...

Rather than on a leg like the public.

CHRIS Of course, Jeff... Nothing up our sleeve here. No shenanigans. No insider information.

Just decades of experience on the cutting edge — or should I say, the bleeding edge — of technology.

Now, here's another example the analysts found...

Relmada Therapeutics...Had you bought a year ago, you'd be up 30%.

But had you got positioned early, you could be up as much as 1,500%... That's 50 TIMES MORE money from the exact same stock...

And we are this story you out again and again...

On Fortress Healthy Aging, you could have made 196%... But insiders were gains as high as 4,400%...

On Axsome Therapeutics, you could be up 161%... Insiders had the chance to make 3750%

On Arrowhead Pharmaceuticals, you could be up 110%... Insiders could be up as much as 4,620%...

JEFF Can you see the difference being early makes?

CHRIS Sure, Jeff. I have to be honest... This is a bit upsetting. It really does seem like the game is rigged.

I mean, you still could have done well, if you'd gotten into these opportunities recently...

With just a small $5,000 stake in each company, you could have walked away with $69,000...

But had you gotten into these opportunities early, with the exact same starting stake...

You could have walked away with $821,000

By being early, you miss out on more than $750,000 in profit — from the exact same stock.

JEFF Chris, it's important to remember: All investments carry risk; past performance does not indicate future returns.

But as you can see... when you're early, the upside can be massive.

And that's why I'm here today...

To show you how to play the next big tech trend like an insider.

CHRIS So what are the tech insiders buzzing about now, Jeff?

JEFF Precision medicine, Chris.

Specifically, gene therapy.

Over the next few years, it's expected to become a $200 billion industry.

And when it comes to precision medicine, there's one company I'm most excited about.

They're developing revolutionary gene therapies for rare diseases.

This will be the building block for the explosive in precision medicine coming in the very near future.

This company could be in possession of a "once shot and done cure."

Using precision medicine, they can essentially identify the faulty gene and "insert" a new one that works.

It's the first and only treatment of its kind. And it's cheaper than the current treatments on the market.

Even better, this unique gene therapy technology is on the verge of FDA approval.

CHRIS Is they can just "insert" a new gene... just like that?

JEFF That's right. It's as simple as getting a flu shot. In and out in a few minutes.

And this company already has six treatments approved by the FDA.

As an investor, I love to see that. It shows me they have experience getting treatments through the pipeline.

CHRIS So what kind of traction will this new treatment get in the market?

JEFF Great question!

This company is on track for FDA approval as early as next year.

But you don't want to delay...

Tech insiders like me don't wait for approval to invest.

If we know the technology is valuable, we get in ahead of approval.

It's yet another example of Tech Leg of work.

Regular investors don't hear about these companies until after they get FDA approval.

That's when the tech scene of the profits disappears.

Because once this company gets approved, well, it's off to the races.

It doesn't pay to hesitate.

CHRIS So where do we find the name of this company?

JEFF Chris, I came prepared.

I put together a special report with all of the key details about this exciting precision medicine company.

CHRIS What's the report called?

JEFF It's called **Precision Insider: The $200 Billion Medical Breakthrough**.

And I brought a few copies with me today.

This is one of the most urgent reports I've ever put together. It contains everything you need to get positioned in this groundbreaking gene therapy company.

That includes the name and ticker symbol.

As well as a full breakdown on all of the details on this company...

This is the stuff only tech insiders usually hear about.

I want to make sure you see why this company — and this technology — is so valuable.

Straight from the expert's mouth.

CHRIS Can you tell our viewers at home how they can get this report?

JEFF Sure, Chris.

In a moment, I'm going to give everyone watching a chance to claim a copy.

But before I do...

There's something else in this report.

A special bonus recommendation.

As I showed you, the precision medicine trend is going to be huge.

The progress being made is just incredible... Breakthroughs in this space are happening weekly.

There will be dozens of opportunities to profit.

And I've included the name of my second favorite opportunity as a bonus.

I don't want to spoil the surprise...

But I will say this: The last time a company backed a global health issue with this sort of potential they handed investors a 13,000% gain.

CHRIS That's enough to turn a $5,000 investment into $651,000...

JEFF But you had to get in early! And you have the chance today.

Now, Chris, we know the markets can sometimes be unmanageable — and I can't make any promises...

But if this company does even half as well, it could hand investors an absolute fortune.

Everything you need to know is in my report, **Precision Insider: The $200 Billion Medical Breakthrough**.

Now, I'm ready to share it.

Now, for folks watching at home, stay tuned — in a moment, we'll share how you can get your hands on a copy of **Precision Insider: The $200 Billion Medical Breakthrough** today.

But first, I think we're ready for our second question.

CHRIS Our second. I'm ready.

Our second guest today is Mariah, from Pennsylvania.

Chris Jeff starts for having us.

During the COVID-19 pandemic, we learned we can't rely on other countries for our critical supplies — especially China.

Once factories closed down, Americans faced shortages, from hand sanitizer and toilet paper, to lithium batteries and raw materials.

Grocery store shelves were empty... And delivery was hit or miss.

Everyone's struggles to get essentials.

Is there any hope for American industry that will fix this supply problem?

Jeff We were caught short during the pandemic, no two ways about it.

It was a scary lesson for everyone.

I don't think a lot of Americans understand just how fragile these international supply chains are.

But the pandemic is forcing many companies to change — quickly.

And I believe there is one trend — one technology — that is going to help the U.S. reclaim our supply chains — and reclaim our factories back from China.

I'm talking about robotics...

Chris Robots? Like walking, talking robots—

Jeff Sorry, sorry to butt in... Jeff, I have to ask... With robots, will I be out of a job?

Jeff Look, I know the idea of robotics sounds scary.

But this trend has already been playing out for more than a decade...

Take Amazon, for example.

With the help of robotics, Amazon has seen enormous growth — and in turn, it's allowed American workers to grow their paychecks.

Amazon now has 100,000 robotic systems deployed here in the U.S. alone.

Yet, over the past few years, they've created hundreds of thousands of new jobs.

In 2017 alone, Amazon created more than 40 U.S. states... And that's according to the Bureau of Labor Statistics

At total, Amazon employs roughly 1.2 million workers...

I understand why robots make people nervous.

You don't have to be.

Robots will never 'replace' humans. They're there to make our jobs easier.

They're designed to do the physical work that would otherwise be unsafe or simply unpleasant for humans.

It's all part of a larger trend to bring manufacturing back to America.

The world spent the last three decades focused on building global supply chains...

The primary consideration was low cost of production.

The factory jobs left the U.S. because Chinese workers accepted far lower pay

But the factories will come back to America because robots cost even less than low-skilled Chinese workers.

And bringing those factories home will create a huge boom in associated jobs that pay far better than factory jobs.

Robotics is the type of innovation that will make America competitive again.

I expect hundreds of thousands of jobs will finally return from overseas.

I'm calling it the 'American manufacturing renaissance'.

Chris, I sent over a graph beforehand. Can we put it up on screen for the people at home?

CHRIS: Healty? 6G? I had no idea.

JEFF: The biggest companies in the world are already using it. They're paying millions — every month — to access the technology underlying the "6G" network.

I'm talking about names like:

- McDonald's
- Disney
- Johnson & Johnson
- BMW
- ESPN
- Zillow
- Pfizer
- Airbnb
- Sony
- General Electric
- Capital One

In total, as many as 100,000 of the world's most successful companies are paying a fortune to get early access to the next level of network speed.

If you want to be a tech insider, there's only one question you should be asking right now...

CHRIS: What companies are powering this "6G" network?

JEFF: Exactly!

I just finished a thorough investigation into 6G. And I believe it could eventually be worth trillions of dollars.

But there's only a few critical companies I'd recommend today. These are the companies that make the critical hardware for 6G.

And I've put everything in a new special report.

It's called ***6G Insider: The Next Trillion-Dollar Network***.

And when you accept my invitation to ***The Near Future Report***, I'll make sure you get a free copy.

CHRIS: In just a moment, we'll show you how you can get all three of Jeff's new reports.

Jeff, thanks for the incredible program.

Any last words of advice for our viewers?

JEFF: I know it's a crazy time in the market.

And while I can't predict what the world will look like 10 years from now, there's one philosophy that guides my investments...

When I was working in Japan, I spent years practicing an ancient martial art called Shotokan.

It's one of the four traditional forms of karate, originally practiced in Okinawa. It requires discipline and focus, concentration developed over years of experience.

I also picked up an ancient Japanese proverb during my time there. It's one that sums up my investment philosophy.

It's phonetically translated as "mikka saki shireba choujya."

Roughly, in English it means:

If you can see three days into the future, you'll become rich.

In other words, you don't have to know what's going to happen miles down the road to get rich on tech stocks.

You only need to know what's coming right around the corner.

That's why I created ***The Near Future Report***.

And today, I'd like to invite you to give it a try.

CHRIS: Ladies and gentlemen, Jeff Brown.

JEFF: Thanks again, Chris.

CHRIS: Wow. You've just witnessed Jeff Brown, the Ultimate Silicon Valley Insider, give you a glimpse into the heart of the tech industry.

And today, he's offering you a chance to join his special ***Near Future Report*** where he shares the latest and greatest tech breakthroughs.

Remember, Jeff has accurately predicted the #1 stock of 2016, 2018, and 2019. And he's already nailed three of the top stocks of 2020...

Will he be right again?

It's up for you to find out.

All you have to do is accept Jeff's invitation to join ***The Near Future Report*** today.

To sum up Jeff's offer.

When you take a subscription to Jeff's investment newsletter, ***The Near Future Report***, you'll get free access to Jeff's **"Tech Insider Package,"** which includes:

Special Report #1: ***Precision Insider: The $200 Billion Medical Breakthrough...***

This includes Jeff's top two precision medicine plays today.

Special Report #2: ***Robotics Insider: How to Profit From the Return of American Manufacturing...***

This includes Jeff's top two robotics plays... the companies that will drive the American manufacturing renaissance.

You'll also get Special Report #3: ***6G Insider: The Next Trillion-Dollar Network***.

According to Jeff, "6G" will unlock a projected $15.7 trillion in new wealth.

And Jeff Brown is one of the foremost experts on the topic.

With your subscription, you'll get a whole lot more than just three special reports.

You'll get 12 monthly issues of ***The Near Future Report***, full of executive quality research on the profitable world of tech investing.

Jeff uses his years of experience in Silicon Valley to uncover the best stock market investments. Ones that combine stability with the potential for explosive growth.

But you'll hear from Jeff more than just once a month.

He'll update you at least once a week with the latest in the tech market and stock-specific buy and sell advice...

Mostly, you'll appreciate Jeff's calm, prudent voice in tech.

We all know how the tech market can be. Riding high one day and crashing the next.

You need someone with a steady hand in both situations.

That's Jeff Brown.

Lastly, the moment you sign up, you're going to get access to Jeff's full data archives... all of his past issues... basically everything he's ever written.

The Near Future Report comes with a highly rated customer service team.

So, if you have any problems with your subscription or accessing your member benefits, just give them a call or email.

They can help you get logged in, find that report you need, or pass on a suggestion for Jeff.

Just please remember, they cannot provide personal investment advice.

You'll receive all of this today just for giving ***The Near Future Report*** a risk-free try.

And we're going to give you a very special price on a one-year subscription to Jeff Brown's ***Near Future Report***.

Just one of Jeff's recommendations could make you a fortune.

Nvidia alone would have returned $208,000 for $10,000 risk.

And someone with the expertise to 20x your money is worth a lot.

In fact, Jeff's been offered thousands for his research.

But he's going to give it to you for far cheaper.

For just $49, you can get 12 months of ***The Near Future Report***.

That comes out to just over $4 a month.

Less than a cup of coffee per month.

With the way the tech market is going, you could make that back in a matter of hours.

Even better, Jeff will give you 60 days to try it out and see if ***The Near Future Report*** is right for you.

If you don't like it, simply cancel in the first 60 days and he'll give you a full refund, no problem.

But after what you've heard today, I can't imagine you wouldn't be satisfied.

Tech stocks are the hottest in the world right now.

And Jeff Brown is as tapped into these markets as anyone I've ever seen.

Just a small investment in the stocks he's shared today could make you a fortune.

If you're at all interested, why not give ***The Near Future Report*** a risk-free try? Click the button below this video to get started.

Remember, you get an iron-clad, 60-day money-back guarantee.

If you're ready to become the newest member of ***The Near Future Report***, click the button now.

Thank you all for attending and those of you at home for watching.

December 2020
