LIVE: TOM GENTILE REVEALS...

New Crypto Bull Market Trade Is Creating Profits 20X Bigger than Bitcoin

For every $1,000 you'd make with Bitcoin...
This special trade could make you as much as $20,000 instead

And I predict Bitcoin would more than double... hitting $20,000 by the end of 2020.

Guess what?

It blew past that number on December 16, 2020... exactly two weeks ahead of schedule.

And today, I'm inside my Crypto Bat Room again...

But this time I'm making my biggest prediction yet.

Bitcoin will hit $50,000 by the end of 2021...

And hold on to your chair, folks, because...

I expect Bitcoin to skyrocket to $265K... $300K... $400K... all the way to $1,850K by 2030.

Yep... you heard that right. A single Bitcoin will be worth a cool $1,850,000 in the next nine years.

In other words, a 2,700% gain!

That's how I'm saying Bitcoin. And you should seriously consider buying some for long-term gains.

For me, Bitcoin will be the best buy-and-hold investment of the next 10 years.

And if I'm right, you and I both stand to make a killing by the end of the decade.

But as much as I love Bitcoin...

There's an even better way to make BIGGER — and FASTER — money in the crypto market...

I'm talking about a special kind of crypto. It's a market account with fixed cash-and-coin gains ready to roll in 18 months or fewer. Heck, not even three months from now.

I'm talking about the potential to have you the biggest gains of your life – over and over again... STARTING TODAY.

All it takes is one simple move on a very special kind of crypto.

I call it a Profit Multiplier Trade.

And I'm going to show you how to multiply your gains compared to Bitcoin by up to 20 times...

Now, maybe you think I'm being greedy.

Heck, yes, I am...

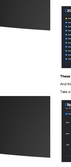
I've built a fortune thanks to my three decades in trading. Finding fast-moving plays for big gains is what I do for a living.

And that's exactly what I have in store for you today.

In terms of pure earnings power... week after week... month after month... even year after year.

Nothing beats this special kind of crypto. Not even a huge bull run in Bitcoin.

Check this out:



What you're looking at is a chart of the legendary 2017 bull market in crypto... a massive run that saw the entire crypto market skyrocket over 3,363% in a single year.

Hell, let me tell you something that will surprise you...

Most people think Bitcoin was the big winner that year.

But set your eyes on this...

The chart compares Bitcoin versus the special kind of cryptocurrency I've been telling you about.

As you can see, Bitcoin's value jumped by 1,900%...

But these little-known cryptos shot up in total valuation by an astounding 15,000%.

That's a 21X Profit Multiplier!

So while you would have made good money on Bitcoin...

You could have made an absolute fortune on the special type of crypto.

In fact, take a look at this info...

These 72 little-known cryptos completely destroyed Bitcoin in 2017...

And this next one did even better...

Take a look at this chart...

This top performer in 2017 grew an incredible **27 times** faster than Bitcoin did.

Now, that's for the entire year.

But you don't have to wait a whole year to beat Bitcoin. You could beat it week after week after week.

Look at the chart...

In only 7 days, this special kind of crypto beat Bitcoin by 2,373%.

That's a 24X Profit Multiplier!

And here's the best part...

If you had invested $5,000 in Bitcoin, you would have cashed out with $10,000.

However, if you invested that same $5,000 in this special crypto...

You would have cashed out with $123,932!

Folks, that's over $123,000 more cash... in only 7 days!

Amazing, isn't it?

And here's the best part...

This new crypto bull market is setting up these Profit Multiplier Trades all over again.

In fact, big bad pros have been beating Bitcoin all year long by huge percentages.

I'm talking about **142%**, **158%**, **330%**, **780%**... all the way up to **1,904%**.

That's right, all these trades – and more – exponentially multiplied Bitcoin's returns over the same time frame.

Sure, **cryptos are speculative investments, and like any investment, you could certainly come out on the losing side at times.**

But when things go in your favor, the fast gains can be unbelievable.

The fact is you've seen it your entire life.

And in a moment, I'm going to show you how to get your timing down to a science.

That way, you can trade dozens of special cryptos that could give you enormous gains over Bitcoin...

There's a handful of them waiting for you right now.

Including three you can pull the trigger on right away for a shot at triple-digit gains in a matter of 30 to 60 days.

Listen, I've never been so excited about the cryptocurrency market as I am right now.

We're looking down the barrel of a new generational crypto bull market in Bitcoin.

I'm talking about...

A bull market even bigger than 2017... and one with a massive number of opportunities.

Just look at who's jumping on board. PayPal, the world leader in online payments, is going all in.

Think about how huge this is...

$46 million people use PayPal every day to purchase everything from toothpaste to office furniture to diamond jewelry from 22 million merchants worldwide.

In fact, these folks used PayPal to spend a stunning $222 billion during a recent three-month period.

That's another quarter of a trillion dollars in three months, so obviously PayPal knows a lot of money.

And for the first time ever, PayPal is going to allow their users to pay for anything they want using cryptocurrency instead of dollars.

Make no mistake. This is a huge... I mean HUGE... development that's sure to send the valuation of the crypto market to the moon.

For the first time ever, you can buy crypto right on PayPal.

Once it's in your account, you can use crypto to buy anything you want on PayPal... or send it to friends... even to pay for an Uber ride.

And it's a brand-new market in a moment on the other side accepts crypto or not.

Because whenever a payment is made...

PayPal instantly converts the crypto into fiat currencies like the U.S. dollar.

That means if you're on the receiving end of getting sent crypto is just as good as getting sent cash.

Just to show you how huge this development is...

PayPal also operates another online payment platform called Venmo.

Where PayPal is popular for buying just about anything online, Venmo is 100% focused on small, personal transactions.

You may have a Venmo account to make small payments for your dog walker, your kid's babysitter, splitting a dinner check with friends, or paying your share of the rent to your roommate.

Venmo's 52 million active users are already sending $1 billion a month.

And in the first half of 2021, Venmo users will be able to buy crypto... and make payments with crypto right from their phones.

So now you know why making payments with crypto is about to get a lot easier.

And why I believe the demand for crypto is about to shoot a lot higher.

In fact, within four weeks of the PayPal news...

The market cap of all cryptocurrencies skyrocketed by $929 billion!

Continued...

Continued...

That's right folks... this breakthrough by PayPal created $929 billion out of thin air.

And this is only the beginning...

Because they've set the stage for all their competitors to jump aboard too.

The fact is Visa and MasterCard are right on their tail.

And that will drive crypto prices even higher. That's why...

The time to pounce on these little-known cryptos is NOW!

While they're still cheap... sometimes trading for only pennies.

I've been piling these special cryptos all year – and watching them beat Bitcoin by huge margins.

I'm talking about 2X, 4X, 8X and even 20X the gains and more.

Let me show you...

I first recommended a Profit Multiplier Trade on December 11 of 2019 with one of the those special cryptos I'm talking about.

This one with symbol LZND.

Thirty-one days later, it was time to cash in.

And how how LZND outperformed Bitcoin...

You can see from the yellow line how Bitcoin went up 7% – while the blue line shows that our LZND pick soared more than 700% over the same time period.

That's right, LZND soared 780% more than Bitcoin.

So for every $1,000 you could have made with Bitcoin... LZND would have handed you $8,800 instead.

That's an 8X Profit Multiplier.

So anyone who still thinks Bitcoin is the greatest game in crypto... think again.

Here's another one...

On New Year's Eve 2019, I got a Profit Multiplier Trade signal on LTC.

Sure, I was getting ready to celebrate a new year... but why not do it with a moneymaking trade?

Seventeen days later, anyone who followed my recommendation was able to cash in.

There's the yellow line for Bitcoin. And there's the blue line for LTC.

LTC took off, handing Bitcoin by 107%.

So for every $1,000 you could have made with Bitcoin... LTC would have handed you $2,070 instead.

That's a 2X Profit Multiplier.

How about this...

On July 15, my alarm went off for a trade on XRP.

Thirteen days later...

There's the yellow line for Bitcoin... and there's the blue line for XRP.

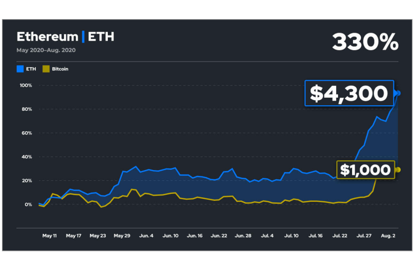
XRP is up 142% more than Bitcoin's return!

So for every $1,000 you would have made with Bitcoin... XRP would have handed you $2,420 instead.

That's a nearly 2.5X Profit Multiplier!

These winning trades beat Bitcoin time and time again.

Here's another...



On May 11, I picked a Profit Multiplier Trade on ETH.

And sure enough, 82 days later, it was time to cash in.

And look how ETH performed...

330% better than Bitcoin!

So for every $1,000 you would have made in Bitcoin... ETH would have handed you $4,300 instead.

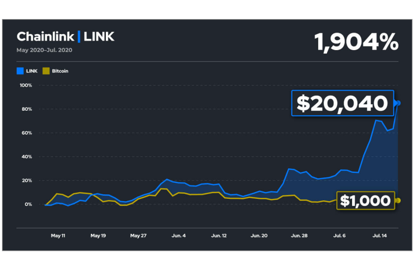
That's a 4X Profit Multiplier.

Now, if I have the choice between taking $1,000 in this hand... or $4,300 in this hand... I'd go with the $4,300 all day long.

Wouldn't you?

Now get a load of this next one.

On May 11, I uncovered yet another Profit Multiplier Trade.



This time on symbol LINK.

Sixty-two days later, we hit a massive windfall.

LINK soared, crushing Bitcoin by 1,904%.

So for every $1,000 you would have made with Bitcoin... LINK would have handed you $20,040 instead.

That's a 20X Profit Multiplier.

You heard that right...

Folks acting on my LINK recommendation would have made **20 times more money** than if they bought and sold Bitcoin over that same 62 days!

I'm sure by now I don't even have to ask if you would choose 20X the money... it's a no-brainer!

I hope you're starting to see the unbelievable potential here.

These Profit Multiplier Trades are absolute gold mines.

Look, if Bitcoin goes from $20,000 to $50,000 like I'm predicting for 2021... that's a 150% gain.

Not bad...

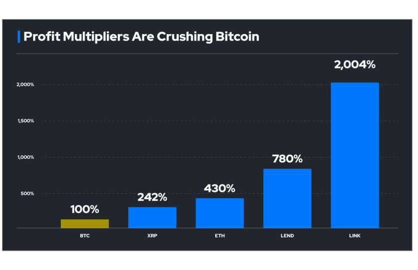
I'd be really happy with more than doubling my money on Bitcoin over the next 12 months.

So that's why I said earlier: You should definitely consider a stake in Bitcoin.

You'll be happy you did in one or two years.

And you'll be ecstatic nine years from now if it hits $500,000... as I predict.

But look at how much money you could already be making playing these Profit Multiplier Trades right now...



If Bitcoin goes up by 100%...

That means **XRP could soar 242%**, **ETH – 430%**, **LEND – 780%**, and **LINK –2,004%** higher.

Those are Profit Multipliers two to 20 times better than just playing Bitcoin!

And you could make these plays day after day... week after week.

Listen, as big as the gains I just showed you have been...

I have no doubt they're about to get a whole lot bigger.

I mean on a scale that I can't even fathom.

Because my in-depth analysis leaves no doubt...

We're heading straight for the biggest bull run in cryptocurrency history.

You see, there's another huge tailwind that's set to drive the price of these special coins up even further and even faster than Bitcoin...

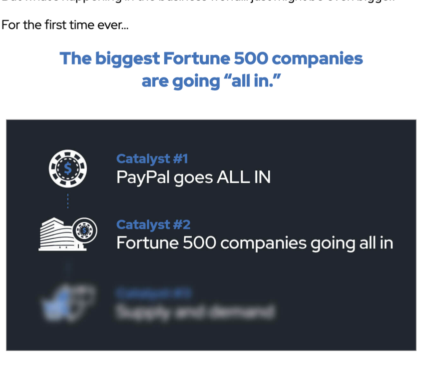
And make anyone who jumps in now a ton of money.

The PayPal news... that's huge for the consumer market.

But what's happening in the business world... just might be even bigger.

For the first time ever...

The biggest Fortune 500 companies are going "all in."



I'm talking about iconic companies like **Amex**, **Hitachi**, **IBM**, **Aetna**, **FedEx**, **Microsoft**, **and Walmart**...

NOT on Bitcoin... but on this special kind of crypto I've been telling you about.

Even Google and Oracle are jumping in as I speak.

And it's all because of something called smart contracts.

This amazing new crypto technology allows the world's biggest companies to save massive amounts of money on all of their big-ticket transactions.

We're talking up to $1 trillion a year.

Now, maybe you're wondering what a smart contract is.

In essence, it's a crypto version of a simple purchase agreement between two companies... one buyer and one seller.

Let me show you how it works.

Say you're a big industrial company like Hitachi.

One of the things Hitachi is famous for is heavy equipment... like huge excavators used in mines.

And if you're going to manufacture these excavators quickly and efficiently... you need the right parts at the right time.

So if one supplier provides the bolts for the excavator, Hitachi can pay them directly with a smart contract.

If another supplier provides the steel for the excavator, Hitachi can pay them directly with a smart contract.

Whatever part of that excavator is needed, Hitachi can pay the supplier directly with a smart contract.

In other words, they skip right over the crazy expensive distributers... and go right to the source.

That means Hitachi gets the goods right when they need them – saving billions of dollars in the process...

And the suppliers are happy because they get paid right on time.

Now, these smart contracts only come from these special kinds of cryptocurrencies...

The kinds that have the potential to make you 20X more money than Bitcoin.

And here's the thing...

A new upgrade is kicking in for the world's leading smart contracts platform right now.

And the improvements in speed are amazing.

Before, it could only handle 15 transactions per second. Now it covers all the way up to 100,000 transactions per second.

It's instant scale, folks.

Suddenly this smart contract platform is going from a few companies using it... to hundreds, even thousands being able to use it – all at the same time.

Add the massive new consumer demand from PayPal payments to the massive new corporate demand from smart contracts... and you get a huge bull run in crypto.

I'm ready to show YOU exactly how to make a killing.

In fact, we've been hitting these special cryptos for gains that blow Bitcoin away.

One of the things I love about Profit Multiplier Trades is you can do them over and over...

Like the pick on LOOM I made on February 3...

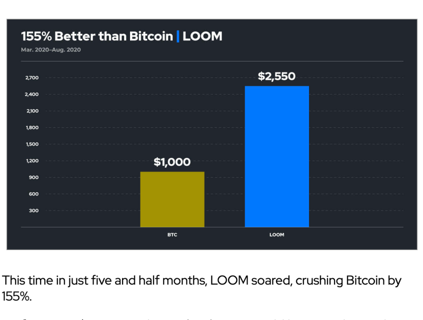
About six and a half months later...

LOOM cruised to a return 158% higher than Bitcoin.

So for every $1,000 made on Bitcoin, you could have made $2,580 on LOOM.

A nearly 3X Profit Multiplier.

A month later, it was time for another recommendation on LOOM.



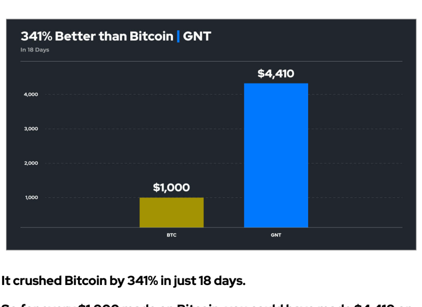
This time in just five and half months, LOOM soared, crushing Bitcoin by 155%.

So for every $1,000 made on Bitcoin, you could have made another $2,550 on this second LOOM trade.

Another nearly 3X Profit Multiplier.

Not bad, huh?

We did the same thing with GNT.

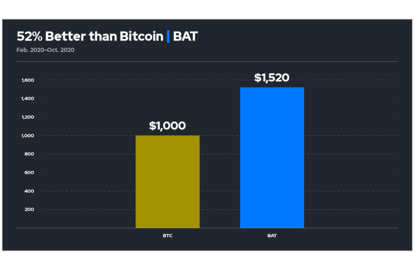


It crushed Bitcoin by 341% in just 18 days.

So for every $1,000 made on Bitcoin, you could have made $4,410 on GNT.

A 4X Profit Multiplier.

We did it again with BAT.

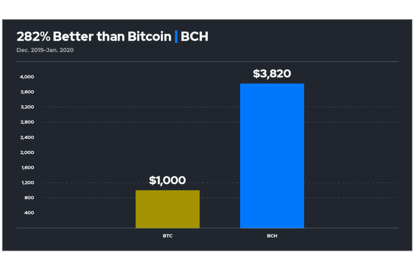


During its eight-month run, it beat Bitcoin by 52%.

So for every 1,000 made on Bitcoin, you could have made $1,520 on BAT.

A 1.5X Profit Multiplier.

And yet another time with BCH.



In only 25 days, this Profit Multiplier Trade beat Bitcoin by 282%.

So for every $1,000 made on Bitcoin, you could have made $3,820 on BCH.

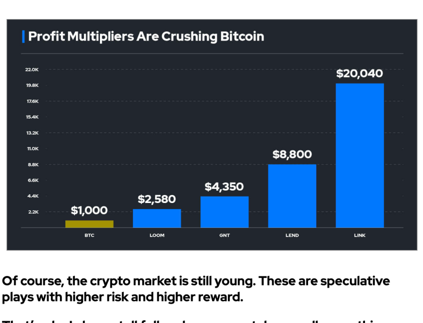
That's a nearly 4X Profit Multiplier.

It's crazy how well this can work.

My best-performing Profit Multiplier Trades have been crushing Bitcoin by 158%... 273%... 282%... 330%... 335%... 780%... even 1,904%!

So for every $1,000 you would have made from just investing in Bitcoin...

You could have made $2,000, $4,000, $8,000, even $20,000 instead by getting into these special kinds of cryptos.



Of course, the crypto market is still young. These are speculative plays with higher risk and higher reward.

That's why I always tell folks – keep your stakes small, something you can afford to lose.

But the great thing about these little coins is they're not anywhere near as expensive as Bitcoin.

In fact, they are so inexpensive... yet so potentially explosive...

You don't have to invest a lot to make a lot.

Small, extra-cash stakes of $250, $500, or $1,000 will do.

The point is trading these cryptos consistently beat Bitcoin by a hefty, hefty margin.

282% better on average.

That's nearly 4X better than Bitcoin.

Just take a look at the Profit Multiplier recommendations we closed this year:

Profit Multiplier Crypto Winners

AAVE	+100%
BCH	+50%
ETC	+64%
LTC	+50%
GNT	+53%
XRP	+50%
ETH	-15%
ZRX	+100%

Winner after winner after winner.

95% of them produced the opportunity for big profits.

And 84% of these trades outperformed Bitcoin.

In fact, our average recommendation is up 50% in only 84 days across our closed trades and the ones that are still open!

Not to toot my own horn...

But if you can find someone credible who's done better, I'll buy you a steak dinner.

Now, you may be wondering...

How am I able to uncover so many of these Profit Multiplier Trades?

Well, if you know anything about me...

You know I discover unusual patterns in financial markets...

Patterns that indicate big moves to the upside are about to take place.

These are just like patterns in nature... in the weather... the kind you see in science and mathematics.

They predict outcomes with remarkable consistency.

Market patterns work the same way... whether it's stocks, bonds, options – and even cryptocurrencies.

Tapping into them gives you the best chance I know of to make consistent money time and again.

In fact, two years ago, I discovered a distinctive pattern in the crypto market – and it's one of the most powerful I've ever seen.

I'll explain how these patterns work in a moment...

Plus, I'm going to share details on three new Profit Multiplier Trades that are ready to burst skyward right now.

The pattern has appeared in all three. Each could make you triple-digit gains in as little as 30 to 60 days.

And there are so many plays like this coming up...

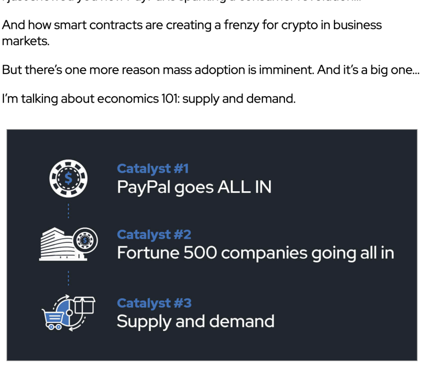
The reason is simple: Mass adoption of cryptos is about to take off like never before.

I just showed you how PayPal is sparking a consumer revolution...

And how smart contracts are creating a frenzy for crypto in business markets.

But there's one more reason mass adoption is imminent. And it's a big one...

I'm talking about economics 101: supply and demand.



See, Bitcoin was born in the depths of the financial crisis.

It was created to avoid problems we've seen in fiat currencies like the dollar.

Bitcoin and other cryptocurrencies are not controlled by central banks, like the Fed.

Of course, that's been the big problem with fiat money.

Take the U.S. dollar, for example.

Since the pandemic was declared, the Fed has printed $2.7 trillion...

Every time they print another dollar, the value of the dollar in your pocket goes down.

It's tiny, not enough for you to notice at first.

But it's slowly reducing what you can buy with that dollar.

For example, in 1971, you could buy a steak and lobster dinner for two for the crazy low price of $7.25.

And at Facts Only today, that same dinner would easily cost $200 or more.

All because inflation tends to make everything cost more and more... because we have more and more dollars in the system.

Crypto works the opposite way.

Supply is fixed. So as demand goes up, the price of the crypto in your account goes up.

The way I see it...

With the demand for crypto about to go ballistic...

Prices will only continue to go up, up, and up.

Let me give you an example of how finite supply affects price.

Think baseball trading cards... specifically, the famous 1909 Honus Wagner card.

There are only between 50 to 75 in circulation.

It was listed for a mere $50 in 1933.

The last time the 1909 Honus Wagner card sold at an auction, it went for a stunning $3.3 million.

I see the same kind of crazy valuation spikes happening in the crypto space.

Prices will soar year after year because... just like Honus Wagner cards... they all have a limited supply.

Look, the writing is on the wall.

The Fed's printing presses are about to get turned up even higher.

And that's another huge reason people all over the world will be flocking into cryptocurrencies again.

Heck, it's one of the reasons I put my own money in crypto.

I fully expect this new crypto currency bull market to take prices to a level you can't even imagine.

Because cryptocurrencies will become a permanent part of our economy.

That's why I predict Bitcoin is going to $1 million in the next few years.

And as you've seen, you can trade these other currencies and do even better...

So whatever you do... DON'T miss the boat on the bull market.

Now, I've built and put a trading model together that can help you invest in crypto.

And I have a proven way to help you make the most of it...

As I mentioned earlier, it's not predictive.

But I don't just look at ordinary charts to find patterns.

Anyone can do that.

I've spent millions creating technology that finds lucrative crypto patterns for me.

In fact, my Crypto We Room, where I'm at right now, is staffed by award-winning scientists who hold Ph.D.s from MIT and Caltech.

Together, we've built my most powerful tool ever that combines a proprietary mix of artificial intelligence... and quant trading algorithms to spot crypto winners.

Is it perfect? Of course not. No person or system – even an AI system – has a 100% perfect track record. And let's face it, folks, past performance is no guarantee of future results.

But these tools have been right on the money – helping me amass a 30% win rate for my closed plays in the last year.

How is my method so accurate?

You see, my AI tracker discovered that the crypto market is not just about patterns.

It's also about waves.

Specifically, fractal waves.

Fractals are unique mathematical patterns that infinitely repeat themselves. They exist everywhere in nature, even in financial markets.

They're caused by extremes in investor psychology which lead to crazy ups and downs in prices.

And they're usually on the line up underscored in everyday market analysis.

But my technology finds them in waves.

Essentially, there are two kinds of waves.

Corrective waves that mainly move up and down, indicating a price correction.

And impulse waves that keep heading up in a straight line... a bullish move.

My system scours thousands of tiny cryptocurrencies looking for these fractal wave lines.

And not just for one day... but for days on end.

And then when two specific fractal waves cross...

My system gives me a signal to pounce!

The first is called the Long-Term Currency Wave.

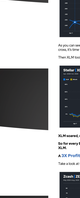
It smooths out the price action over the last month.

The second is the Short-Term Currency Wave that smooths out the chart over the last 24 hours.

When they cross, we make our moves...

And we've been able to grab winner after winner after winner.

In fact, two days before Christmas of 2019, my Fractal Wave Pattern showed up here on ETC...



As you can see, the pattern appears first, then it verifies itself with the crossing of two distinct lines. When the lines cross, it's time to strike.

Fourteen days later... we hit a nice payday.

And it took ETC outperformed Bitcoin.

ETC took off and smashed Bitcoin by 218%.

So for every $1,000 made on Bitcoin, you could have made $3,180 on ETC.

That's a **2X Profit Multiplier!**

Here's another one.

On April 2 my Fractal Wave Pattern appeared on XLM.

As you can see, we had the crossing of two distinct lines. When the lines cross, it's time to strike.

Then XLM took a nice three-month run...

XLM soared, outperforming Bitcoin by 27%.

So for every $1,000 made on Bitcoin, you could have made $3,770 on XLM.

A **2X Profit Multiplier!**

Take a look at this one – symbol ZEC.

In May, my tools tracked two different currency waves... you can see them as the lines on the chart.

There's the Long-Term Currency Wave.

And there's the Short-Term Currency Wave.

And right where they cross – bam!

ZEC took off, crushing Bitcoin by 259% over 79 days.

So for every $1,000 made on Bitcoin, you could have made $3,590 on ZEC.

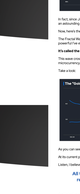
A **2X Profit Multiplier.**

Do you see how incredible this is?

Profit Multiplier Trades like these are being handed to us on a silver platter.

Just to be sure you're getting this, here's one more example.

This time the symbol is ZRX.



Each dark red line is a trade.

Back on April 24, the Long-Term and Short-Term Currency Waves appeared. Then they crossed right here.

We walked just 14 days... and BOOM... it smoked Bitcoin for a profit 273% higher.

So for every $1,000 made on Bitcoin, you could have made $3,730 on ZRX.

A **nearly 4X Profit Multiplier.**

Listen... these Profit Multiplier Trades are the real deal.

And they are so easy to trade.

You don't need any special clearances. No margin account. And you don't have to have any experience in cryptocurrency trading to be successful.

And here's the thing...

The gains I've observed my here today are tiny compared to what I believe is coming.

All because of the new crypto bull market starting to get steam.

So what are these special kinds of cryptos I've been telling you about?

I call them microcurrencies.

There are two types.

First, there are smart contract microcurrencies.

They're used in industries around the world including real estate, healthcare, energy, travel, biotech, health care, financial services... you name it.

They help businesses make large financial transactions faster – and more efficiently.

And second, there are microcurrencies that benefit consumers.

They can send money at home all around the world fast and cheap.

That's right, both of these types of microcurrencies have real-world uses.

That's what I love about them.

And I also love that most of them are still very cheap.

Which is why the gains can come so big and fast.

Let me give you details on three microcurrencies I predict will soar any day now.

My AI system has spotted the Long-Term and Short-Term Currency Waves on all three.

These have been crossed. That means each gives you a chance for triple-digit gains within 30 to 60 days.

The first one is a microcurrency now growing wildly popular in the Middle East and Asia.

They're an everyday individuals, AND institutions, collect interest on crypto assets without having to go through all the scrutinized you normally get with traditional banks.

And these payouts can add up fast.

One leading decentralized finance platform is collecting up to 300% more in staking interest compared to traditional banks.

The microcurrency already has $7.5 billion in assets earning interest right now...

But that's a tiny fraction of the next $450 billion sitting in crypto today... leaving room for huge growth.

And the best part about this trade is there are two ways to play it.

For a short-term trade, my signal is 50% Or you can take it a little longer game, cash quadruple with potential

That's only up to 1,000% or more at these prices.

That's not bad play.

The third one is one of my favorite microcurrencies to trade.

It's a microcurrency that operates a sort of "internet" for crypto networks around the world.

Through its blockchain protocols, it allows various industries to communicate with each other and share their transactions between them. It's truly ingenious.

The way for you to getting into this baby before it takes off.

It's cheap... under $5.

So anyone can own a piece of this little microcurrency and enjoy the thrill ride as it makes big moves after big moves during the new bull market.

The third microcurrency I'm recommending was created by a company I call the "PayPal of Asia."

And this crypto is geared up for a major run.

You see, in Asia, they don't rely on credit cards like they do here in the States.

So folks in Asia with credit cards often have a hard time buying the things they want.

To solve the problem, this Asian payment processor came up with a microcurrency that allows folks to send money directly from their smartphones... without using credit cards.

And it's become hugely popular.

In fact, since January 2020, the market cap of this tiny crypto has grown by an amazing 1,900%.

That's from the early days.

The fact that it's been so open for its cryptocurrency is one of the most powerful I've ever seen.

It's called the "Golden Crossover."

This wave, marking the kick-in-the-pants of the biggest long-term moves in the microcurrency market, and in this case, it's no different.

Take a look.

As you can see, I've circled the waves crossing in green... a fabulous setup.

As to current price of just a few bucks, it is an absolute steal.

Listen, I believe...

All three of these microcurrencies are ready to pop for triple-digit gains within 30 to 60 days.

And I don't want you to miss any of them.

So I put together a full briefing with all the details I want to send to you right away.

It's called: **2 Profit Multiplier Trades for 2Q4 More Money than Bitcoin.**

In this briefing, I'll show you step by step how to make **2 Profit Multiplier** – all with the potential to beat Bitcoin by 2X.

It even show you:

- How to set up your account at the best crypto exchange...
- How to transfer funds...
- And how to help protect against any downside.

If this bull market is even half what the last one was... you have the potential for generational wealth within a year.

It all depends on your starting date.

I can't have this briefing in your hands within minutes.

But I do need to bring up something important.

These three cryptos are really tiny.

And the microcurrency bull run will literally crank up the prices.

So today, I can only send this urgent briefing to the first 250 people who join me in a special venture I created.

It's called *Microcurrency Trader*.

Microcurrency Trader
with Tom Dunkley

Listen, I created this research service for people who want to take part in the greatest moneymaking market on earth!

It doesn't matter if you're already trading cryptocurrencies or you've never traded them before...

I'm going to show you opportunities for triple-digit... quadruple-digit... even potential 10-bagger gains within a year.

In fact, with all the Profit Multiplier Trades I see lining up in this new bull market... I expect to provide record-breaking gains.

Here's how it's going to work...

The minute you join me, I'll rush you my urgent briefing with your first three recommendations.

And to help you set up those trades ASAP...

I'm going to include my ***Microcurrency Trader* Quick-Start Guide**.

This will show you how to set up your crypto account and begin trading.

It's all so simple. Easier than setting up a prime account on Amazon.

Next up, I want you to have my special six-part ***Microcurrency Trader* video tutorial series**.

In these videos, I will give you the full details of how and why these microcurrencies can be so lucrative...

How my Fractal Wave system works...

And how we can find the best microcurrency to trade... at any given time... with the best entry point... and optimal time to sell.

I'll also show you how to spot the Long-Term Currency Wave and the Short-Term Currency Wave. Remember, when they cross – that's our signal to get in.

The videos will explain all of that... because I want you to understand the "why."

But make no mistake...

As a member of *Microcurrency Trader*, you'll NEVER have to find any of these trades yourself.

My team and I will be watching these microcurrency markets all day, every day – FOR YOU.

In fact, you can expect to get a new microcurrency trade recommendation on average once a week. That's 52 new trades a year.

And maybe even more.

As soon as those currency waves cross...

I do some final vetting to make sure this is the best recommendation at the time...

Then I send a detailed **Buy Alert** to your email.

The **Buy Alert** will include...

- The name, symbol, and price of the microcurrency...
- A full explanation and my research on why this microcurrency is a "BUY..."
- The chart showing the Long-Term and Short-Term Currency Waves – and where they cross...
- And complete instructions on how to buy this crypto on the exchange and make the trade if you decide it's right for you.

Even better, I am going to send you a **Buy Alert Video** that walks you through the entire trade "live" in person.

That way, you can see with your own eyes exactly what to do.

You can also sign up to get my **Buy Alert Texts**.

I highly recommend doing so.

That way, you'll never miss a big trade if you're not at home or near your computer.

Of course, when it's time to take any profits or if our trade is not performing to our advantage, I will send you a detailed **Sell Alert**.

This will give you complete instructions for closing out your trade.

It will all be explained step by step.

Remember, I'll be taking you under my wing, showing you how to trade these microcurrencies for the biggest profits week after week.

And we're going to keep the lines of communication open at all times.

In fact, every morning, I'll put together our entire group for a special **Daily Debrief**.

It's a way for us to examine our recommendations... keep on top of the markets... and discuss potential big opportunities on the horizon.

Don't worry if you can't participate every day.

I'll be posting these **Daily Debriefs** on our password-protected ***Microcurrency Trader* website.**

The website is a great resource for you, and it's available 24-7.

There you'll find our model portfolio, all of my training videos and research, and a complete archive of past Buy and Sell Alerts.

You'll also get something incredibly fun to keep an eye on: my **Weekly Watchlist**.

This is a list of microcurrencies my system has identified as potential buy opportunities.

I monitor every one of these plays very closely... and I will send you a Buy Alert the minute the time is right to strike.

And I'll tell you something... my Weekly Watchlist is now overflowing with potential moneymakers.

Listen, with this new bull market in crypto underway, it's like being a little kid in a candy store.

Everywhere you look, there's another great play popping up.

That's why I'm so unbelievably excited about the money we can make over the next 12 months and beyond.

I've been waiting for this moment for three years.

I knew there would come a time when the cryptocurrency market would hit a point of no return... and start soaring into the stratosphere.

We are at that point right now – there's absolutely no doubt in my mind.

The prices on these little microcurrencies are going to go absolutely ballistic over the next 12 to 24 months...

And starting right now... you can get in the thick of the action.

All you have to do is start with the three microcurrency plays I'm going to send you in my urgent briefing.

I expect each of these plays to far outperform Bitcoin... and give you an opportunity to score triple-digit gains within the next 30 to 60 days.

I am ready to send you this briefing right this moment so you can get started.

Now, like I said, I have to limit my membership today to the first 250 people who sign up.

That means...

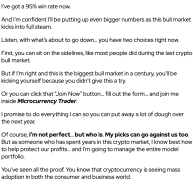
There are only 250 spots available today.

I expect those spots to fill up very quickly.

So if you're ready to work with me side by side, do it now.

There's a button below that will take you to an order form I prepared for you.

It will walk you through everything you'll get as a subscribing member of ***Microcurrency Trader***.



And I'm going to share some very special things today when you subscribe...

First, I'm going to give you an opportunity to join today at a very low discounted price.

This is a serious discount, the lowest price ever offered for this service.

And I can promise you, I won't be able to offer you such a discount for long.

So if you wait... you may be paying a lot more... not to mention you'll miss the three opportunities I just told you about.

And second, I want to make joining me a no-brainer with an amazing guarantee.

So here's the deal...

You're going to get at least 52 microcurrency recommendations over the next 12 months – all with the potential to hit 100% or more.

But I've set the bar much higher...

Over the next 12 months...

I promise to deliver at least 12 recommendations that beat Bitcoin by at least 300% during that trade.

That's 4X your money over Bitcoin... a dozen times over.

If I don't deliver on this promise... just call my team, and I'll give you a full refund – no questions asked.

That means...

Even if I only hit 11 4X Profit Multiplier winners... you get your money back.

I realize this puts all the pressure on me.

But that's okay.

I've got a 95% win rate now.

And I'm confident I'll be putting up even bigger numbers as this bull market kicks into full steam.

Listen, with what's about to go down... you have two choices right now.

First, you can sit on the sidelines, like most people did during the last crypto bull market.

But if I'm right and this is the biggest bull market in a century, you'll be kicking yourself because you didn't give this a try.

Or you can click that "Join Now" button... fill out the form... and join me inside ***Microcurrency Trader***.

I promise to do everything I can so you can put away a lot of dough over the next year.

Of course, **I'm not perfect... but who is. My picks can go against us too.** But as someone who has spent years in this crypto market, I know best how to help protect our profits... and I'm going to manage the entire model portfolio.

You've seen all the proof. You know that cryptocurrency is seeing mass adoption in both the consumer and business world.

That makes this bull run completely different than 2017.

I believe...

This is a shot at the biggest market gains you'll ever see in your life.

So click that "Join Now" button.

It takes you to a secure order form that explains my entire ***Microcurrency Trader*** research service in full.

If you have any questions about the service and how it will work for you, I encourage you to contact our reliable customer service team at 855-909-6600 or 443-353-4770 (for international calls) and mention Priority Code: MCRYK101

Remember, only 250 people can join today...

So don't delay.

As soon as you come aboard, I'll rush you my urgent briefing.

You'll be able to get into all three of these hot crypto plays today!

And by tomorrow, you could already be making big money.

Thanks for being with me today. I'll see you on the other side.
