House News for Seniors! **After years of struggle, scientists finally make brain health breakthrough of the century ... That study found...**

The Brain-Enhancing "LC Particle" Helped Give Seniors A Better Memory

University-backed walnut extract "LC Particle" Could help fight a surprising but [illegible] of age-related memory loss. Scientists believe [illegible] **where brain fog. Even have improve mood.**

[SEE PHOTO BELOW]

Hello, I'm Dr. Richard Gerhauser. If you've been thinking about the health of your **memory** lately, please take a look at this image:

Look especially close at the left arrow ...

It's pointing to a teeny tiny white **speck**.

This little speck may **seem** like just a smudge on the photograph...

But it's **not**.

As a Medical Doctor, I need to tell you ...

When it comes to your memory and brain health, this speck is **extremely important**

Here's how:

Think of the last time you walked into a room and forgot why you were there.

Or when you struggled and struggled to remember a name of someone you met and drew nothing but a **total blank**.

Breakthrough science has now identified this little speck may be the reason why your memory slips from time to time

Thanks to this exciting science, we now know that **getting older does not mean you're stuck with cognitive decline**.

If you embrace three tiny specks...

You can keep your brain and memory may get weaker, even if you're only 60 years old or even 70 or 80.

And if you're over 70 years old right now, it's extremely likely **your brain already contains these specks**.

You can't feel them...

You might not even know they're inside you...

But if you're **frustrated** by more frequent 'senior moments'...

Or you're in this **worried your memory isn't as good as you'd like**...

You need to know about these specks.

Now, to be clear, it's entirely normal to have more and more of these specks in your brain as you age. But even though it's normal ...

These specks may contribute to age-related memory decline

Many people scientists don't understand where these specks came from and ... more importantly ... **we didn't know how to stop them**.

But all that changed now.

The initial tests are finally complete.

The human studies show that it could now be possible to naturally **combat these brain specks**.

And exciting animal research is suggesting **how it may be possible to help stop these memory-dulling specks from forming in the first place**.

And what that means to you is nothing short of life-changing.

This means you could finally **slow down age-related cognitive decline**...

And help **improve your memory**.

Let me repeat that:

When you follow the **scientifically-studied secret** I'm about to show you...

But all that changed now

The initial tests are finally complete.

The human studies show that it could now be possible to naturally **combat these brain specks**.

And exciting animal research is suggesting **how it may be possible to help stop these memory-dulling specks from forming in the first place**.

And what that means to you is nothing short of life-changing.

This means you could finally **slow down age-related cognitive decline**...

And help **improve your memory**.

Let me repeat that:

When you follow the **scientifically-studied secret** I'm about to show you...

You could experience your memory becoming BETTER...

This is not hype.

This was shown in a REAL, clinical study. Average men and women were tested for their memory power just 1 hour apart.

The volunteers who didn't use the memory-improving secret experienced only a 2% improvement in one of their memory tests.

But the volunteers who **did** use the secret, achieved exciting results on a memory test.

Their scores were a full 16% better **in just a single hour**.

That's a full 14 better than those who didn't use the memory-improving secret.

As you'll soon see, this secret could be the perfect answer for your brain health.

I'm talking about finally IMPROVING your memory, attention, and focus...

And before I make your brain feel stronger and stronger...

Imagine waking up each Saturday morning... sending downloads... and beating your opponent in online games.

It seems like you either remember.

Except you've just started using this secret that could help combat brain specks.

It's no easy, you can do it while you sip your coffee.

At first, you figure you'd just use your breakfast, read the paper, and maybe flip on a morning talk show.

But as you dive into the crossword puzzle, something is **different**.

You find yourself **easily slipping through the answers**...

You're 'in the zone' and feel like your focus and mental power have improved.

"It must be working!" you think.

And, suddenly, you realize that a new idea has sprouted for you...

Your brain feels as **sharp**... as quick.

Your memory is better.

You're recalling names of people you just met, what's on your grocery list, and directions to a new restaurant... like it's nothing.

It feels like a big fog has begun to lift.

"This is incredible," you think.

You could feel focused and happier

And you immediately start making plans...

Maybe you'll visit your grandkids this afternoon and play some fun board games.

You **remember** exactly what their favorite snacks are...

And you know they'll be so **impressed** when you're arriving almost every time!

Because your **memory**, your stateliness, and mood have improved ...

You begin tackling projects with a renewed vigor.

Without feeling confused, or frustrated, or quickly out right after you begin.

No more diving back to the start to forgotten item...

No more wondering why you walked into a room.

No more searching for where you just left your sunglasses or car keys...

Instead, as days and weeks pass, all the times you doubted on your memory simply fade into the past...

And each new day brings new adventures and opportunities – thanks to your **improved memory**.

That sounds pretty great, doesn't it? But maybe you're thinking...

It also sounds **too good to be true**...

Especially the part about a better **memory**...

Friend, **everything I've told you today is true**.

These measured memory improvements **come straight from the medical research**.

In fact, you'll **see** the details in a moment.

But, I admit, when I first saw the research, I didn't believe it ...

Because **this breakthrough is changing EVERYTHING** in **Health** as we know about age-related memory loss.

It's what I mean when I say trying to solve age-related memory loss in the past, **as was setting 6 of 6 attempts**.

Let me explain.

I first uncovered this **memory breakthrough** when I saw the scientific report published in the prestigious *National International Journal Of Science*.

In a stunning, rare manner...

Harvard University, The Mayo Clinic, and researchers from around the globe have come together and **agreed on this surprising truth**...

Cold walnut extract may improve your brain.

But one of the true contributors to age-related memory LOSS doesn't *come from your brain at all*

In fact, it's made in a **completely different part of your body**.

It's talking about those **'brain specks'** I showed you earlier.

You might **be surprised** when you find out exactly what they are and where they're from.

That's why I also understand why it's taken so long to discover this **solution to age-related "cognitive decline"**.

In the past, the mainstream has spent years trying to unveil solutions for age-related cognitive decline...

...and they all completely failed.

Pair a long time, 3-year-long research...

But **now** science has now shown the simple reason why:

They were all looking in the **wrong** place.

Until now.

We've finally identified what causes these memory-aging specks to form

Yes, after 170 years of dead-ends and failures, **we found the answer**.

These specks have been **hiding** behind the scenes.

They've been **secretly** affecting your memory, focus, and ability to think.

I'll show you **what** they are in just a second.

But the surprising place they come from...

But the best news is that we know what these specks are and where they come from...

We know how to help fight them.

And I decided that **EVERY American** deserves these life-changing memories...

So, today, my practice specializes in **helping American seniors maintain their health**...

Especially their brain health.

The mission is **personal** for me.

Because I'm not just a Medical Doctor – I'm also someone who's over 60 years old.

I'm at an age when (according to the old science) **I should have trouble focusing**...

And I **should** be getting more and more frustrated with my memory slips.

But I'm not.

Yes, I'm old enough to collect Social Security.

But I write and publish dozens of articles in health and medicine every month.

And I study countless scientific journals to discover the latest in medical breakthroughs.

Even young doctors struggle to keep up with me, but I feel like my life's just getting started.

Now, I'm not saying any of this to brag.

It's so you can see **how powerful this brain-health breakthrough really is**.

Because the same breakthrough could soon be true for you, too.

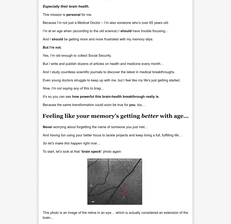
Feeling like your memory's getting *better* with age...

None worries about forgetting the name of someone you just met...

And having fun using your better focus to tackle projects and keep living a full, fulfilling life...

So let's make this happen right now...

To start, let's look at the **'brain specks'** photo again:



This photo is an image of the retina in an eye... which is actually considered an extension of the brain.

And science shows what happens in the retina can reflect what's happening in the brain.

The brain specks is made of a whitish substance called **amyloid protein**.

You might have heard of **amyloid** before.

Amyloid is a **common** substance inside your brain as you age.

It slows down neuron firing and **affects your memory**.

Making the engine slow down...

For years, scientists have been trying to figure out why amyloid forms... *and how to get rid of it*

And they've gotten nowhere.

But now we know **why**.

We always assumed amyloid was made **inside** your brain.

But we were way off.

Because even though amyloid **ends up in your brain**...

It doesn't come from your brain at all.

In 2006, the scientific community got their first hint of the huge medical breakthrough...

When a small, prestige-university study was quietly published in the prestigious journal *Nature*.

Looking back, this study was ground-breaking at the time. **because it exposed a new way to improve age-related cognitive decline**...

In this breakthrough study, researchers gave volunteers with memory problems an insulin treatment that surprisingly had **nothing** to do with their brain health.

And yet, after just 21 days, the researchers witnessed something exciting

Even though the study did NOT load their **brains**.

The volunteers' memory and focus improved **their memory and focus**.

Now, that's pretty amazing considering the memory issues these folks had are **supposedly** in their brains.

In this published paper, the scientists declared more research must be done...

But it was the first in a decade of intense experimentation from numerous top Universities around the world.

We now understand a true cause of memory decline **does NOT come from your brain**...

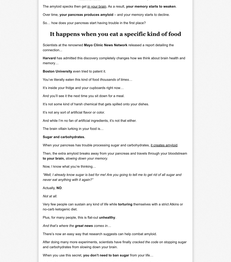
And we also now know the absolutely simple solution to combating your age-related memory loss.

Let me explain.

The true secret to helping make your memory better...

And improving **your mental stamina**...

Starts with a little-stage found on the left side of your body. Take a look:



This organ is your **pancreas**.

Your pancreas is critical for digestion.

It supplies your body with chemicals that help break down and transport food.

But what does that have to do with your **memory**?

That's the uneasy **discovery** these scientists made...

You see, **when you eat too much of a certain kind of food**, your pancreas has trouble processing it all.

And when your pancreas has trouble processing this food, **it actually turns amyloid**, or a byproduct.

When enough amyloid spectra get made, they break away from your pancreas, travel through your blood stream...

And end up in your brain.

That's what the scientists discovered in 2006.

In their experiment, the scientists gave the volunteers a solution that actually **helped their pancreases**.

And so **their memories** get healthier as a result.

I'll skip the rest of the science because it gets **very complicated**.

But when it comes to helping **support your memory**, the important part is very simple...

And it's sending shockwaves throughout the medical community.

Here's what you need to know:

Your pancreas creates amyloid specks when it has trouble processing **one kind of food**.

The amyloid specks then get to your brain. As a result, **your memory starts to weaken**.

Now, **if you pancreas produces amyloid** – and your memory starts to decline.

So... how does your pancreas start having trouble in the first place?

It happens when you eat a specific kind of food

Scientists at the renowned **Mayo Clinic News Network** released a report detailing the connection...

Harvard has admitted this discovery completely changes how we think about brain health and memory...

Boston University even tried to patent it.

You've literally eaten this kind of food thousands of times...

It's inside your fridge and your cupboards right now...

And you'll see it the next time you sit down for a meal.

It's not some kind of harsh chemical that gets spilled into your dishes.

It's not any sort of artificial flavor or color...

And while I'm no fan of artificial ingredients, it's not that either.

The brain-chain lurking in your food is...

Sugar and carbohydrates.

When your pancreas has trouble processing sugar and carbohydrates, it creates amyloid.

Then, the extra amyloid breaks away from your pancreas and travels through your bloodstream **to your brain**, slowing down your memory.

Now, I know what you're thinking...

"Well, I already know sugar is bad for me! Are you going to tell me to get rid of all sugar and never eat anything with it again?"

Actually, NO.

But of all...

Very few people can sustain any kind of life while **torturing** themselves with a strict Atkins or no-carb ketogenic diet.

Plus, for many people, this is fatal **unhealthy**.

And that's where the **great news** comes in...

There's now a very easy that research suggests can help combat amyloid.

After doing many more experiments, scientists have finally cracked the code on stopping sugar and carbohydrates from slowing down your brain.

When you use this secret, **you don't need to ban sugar** from your life...

In fact, if you maintain a normal, healthy diet, you can still indulge in refreshing soda or delicious cake from time to time, just like anyone else...

...and still improve your memory.

The breakthrough came after **years of intense research** by UCLA scientists.

They found **over 200 different compounds**, looking for one that could actually be absorbed and get to the brain...

And finally... after all those dismal failures... they found one.

And when this compound was studied in real human subjects, scientists discovered that it helped...

REMOVE some of the amyloid in the body

In fact, the researchers reported that the compound reduced blood levels of amyloid, which they called **"a marker of brain aging"**.

This secret is called the **LC Particle**.

The LC Particle is a **cashew** that's been **modified** in a special way.

It's **natural** and using it is so easy **you can do it from home in about 5 seconds...**

So measure how powerful it is...

Scientists gave 40 mg of the LC Particle to thirty volunteers in a double-blind, placebo-controlled clinical study – the **gold standard** in medical research.

The volunteers were ag 65 years old and nobody was younger than 60.

Now, most studies on memory go weeks or sometimes even **months** before people feel a benefit (if there even is one).

But not this one.

This study, the scientists gave some **memory tests** to the volunteers before taking the LC Particle...

Imagine sitting alone in front of a computer that displays a random, 3-digit number. For 2 straight minutes, you need to subtract 3 from that number ... and then again ... and again ... and again.

Without a calculator or even a pencil and paper.

You can't use your audio. So you need to remember every step and perform perfectly.

That's ... a small thing participants had to do. The first test was done before taking the LC Particle...

And the second test **just 60 minutes later**.

I'll tell the results speak for themselves...

The volunteers who taking the LC Particle had a very unexpected result...

**Now, this study was not designed to measure memory improvements. It was designed to measure blood levels of amyloid. But the volunteers who took

Sure, the scientists boast their memories would get better ...

But they weren't all prepared to discover **an EX increase compared to the placebo group**.

And that's exactly what happened.

The volunteers who got a placebo (a sugar pill) improved their memory only 2%.

But the volunteers who got the real thing ... the LC Particles ... improved their memory much more: A full 16% better.

This means the group who got the LC Particles improved their memory 5X better compared to the increase in the placebo group.

And the improvement happened in just 1 hour

They continued the study for 28 days and the results just kept getting better.

The volunteers who got the LC Particles **took 5X better** than the placebo group.

In fact, after 28 days, the volunteers taking the LC Particles felt less fatigue **after** taking the memory tests. The placebo group, of course, felt more tired.

That means what we commonly call "brain fog" got better.

That's right, with the LC Particles **your memory could become better**.

You could even feel **more energized** by mental challenges, instead of sapped and drained.

This means you can use your brain to do your jobs, your hobbies, your life.

You could feel like jumping out of your chair and taking on something else that engages you

An afternoon writing session could feel straight-to-jeopardy-city and accidentally productive.

Working in your garden could lead to finally breaking out your canvas for some fun painting ...

Because you **now feel more ENERGIZED**, and able to keep up with all your dreams and aspirations.

All thanks to the memory breakthrough LC Particles.

With special testing, scientists found it improved memory almost immediately.

Remember the image of the amyloid spots you saw earlier?

It was taken straight from a study on the LC Particles.

Specifically, the scientists were looking at amyloid spots in retinal tissue, which is technically part of your brain.

Check out the rest of the images:

Can you see how the spots of amyloid looks brighter in each photograph?

That's the LC Particles surrounding and binding to the amyloid.

As you learned, the LC Particles is the result of PEARS of research by UCLA scientists.

It's based on the natural compound called **curcumin**.

You might have heard of curcumin before because it's the stunning health properties.

Experiments show it's **a stronger antioxidant** than the sea berry, blueberries, and many more.

As world-renowned health researcher Sayer Ji put it:

"Indeed, [this nutrient] turns the entire medical model on its head...its very existence threatens a billion-dollar plus conventional medical establishment."

That's how powerful this memory-improving secret is

But there's a problem.

As amazing as curcumin is, **it can't reach your brain**.

You see, your brain is protected by something called the "blood-brain barrier."

This important **biological wall** stops toxins from entering your brain.

The trouble is, the blood-brain barrier also stops healthy solutions from entering your brain.

In fact, studies show **it blocks 98% of treatments**.

That's where a brilliant group of UCLA scientists came in ...

After so much frustrating trial-and-error, they cracked the code ... **and it happened by accident**.

The science is very in-depth, but basically, they coated the individual curcumin molecules with molecules called **lipids** (a very specific ratio).

And that's why it's called the **LC Particle**. The L stands for "lipids" and the C stands for "curcumin".

Then, they performed a special test to see if this **modified form of curcumin** would stretch better into the brain ...

Yes, as you learned, your brain blocks barrier stops a full 98% of treatments from getting through.

But, it's **amazing** if the original LC Particle was able to pass as good at entering your brain.

Or maybe even 3 times as well ... or 10 times as well?

But what happened is beyond all that. Actually, it's almost beyond **belief**.

It absorbed more than 10X better...

More than 10X better...

More than 10X better...

In fact, when the creators of the LC Particle tested 850 mg against regular curcumin ...

The LC Particle absorbed into the brain a staggering **65 TIMES better**.

Yes, it was superior by **5,500%**. Here's a graph of what that looks like:

And when it reaches the brain, **the LC Particle seeks out and binds to memory-aging amyloid ...**

And when that happens ...

It could help loosens your memory.

Remember, it improved memory **BETTER than the placebo** in the study I told you about earlier.

It's simply stunning. And perhaps the most amazing part is how **SIMPLE** this all is ...

No annoying brain games ... no weird diets ...

The LC Particle is **natural**.

And this **memory-improving technology** is available as a simple powder you can take with a little water.

It's so effective, the researchers have now **patented** it.

However, I've been able to locate a trusted LC Particle **you can still access**.

Imagine making a simple, little tweak in your morning routine (that takes less than a minute) ...

Feeding your mental energy power up ...

Noticing how your brain feels more alive ... like the lights have turned on ...

And you think to yourself, "It's working!"

As time goes by, your memory becomes better.

Your focus does too.

You can hardly believe how easy it is to think and remember more clearly.

When I analyzed these clinical results and, more importantly, when I used the LC Particle myself and felt the difference ...

I knew I was the person to share a breakthrough about your memory.

It's just a moment. I'll show you the **best source** for the amyloid-reducing LC Particle.

It's important you get the **real thing**.

Because of imitations, it's VERY easy to accidentally get a knock-off version that hasn't been shown in clinical studies to pass your brain barrier.

But, before you go, I have one more thing to tell you. And it's vital.

Even though the genuine LC Particle works incredibly well, if you truly want a better memory ...

It's not the **complete answer** for you.

Yes, the LC Particle was shown in one study to **reduce memory-aging amyloid**.

And, yes,

It was shown in a study to help improve memory in just 1 hour...

However, as powerful as that is, **it's just part of the battle**.

Because, as important as it is to reduce the amyloid protein that you have **now**.

You must also help keep your brain from forming EXTRA amyloid spots in the future.

In other words, you need to help reduce the amount of **memory-aging amyloid** from getting into your brain in the first place.

And that's what exciting amyloid research is suggesting may now be possible!

That's why the LC Particle is **only the first phase** of supporting a stronger memory and healthy brain.

There are actually 2 more phases **beyond** that you have **COMPLETE brain and memory support**.

Don't worry. All combined, they're convenient, painless, and easy enough that **you can do them from home in literally seconds**.

I'll also show you **exactly** how you can get them all, and **exactly** what you should take.

This is the same process I give to my patients who are looking to improve their memories...

So, let me quickly show you what these phases are.

Then I'll show you **how to easily use all 3 phases** for a healthier memory.

Remember, amyloid protein spots forming outside your brain.

It comes from your **pancreas**, where it first breaks promiscuously **apart**.

And it's where Phases 2 and 3 come in.

They work to helping your body to continue **to properly manage its sugar**.

So you may be able to form less memory-aging amyloid in the first place.

Okay, you learned how Phase 1 of this memory-improving solution ... the LC Particle ... **has been shown in a study to lower amyloid levels in the body**.

Just from that alone, **you could improve your memory significantly**.

This could also **increase your focus and energy**.

Here's Phase 2, which existing animal studies suggest helped **reduce the amount of amyloid your body makes**.

The source is a natural compound called **EGCG**.

Over a decade ago, scientists at the famous Tohoku University Graduate School of Medicine in Japan discovered something important ...

They studied thousands of men and women over the age of 70.

Some had fantastic brain health.

But others were frustrated with **rapid** cognitive decline.

The researchers discovered something starting ...

There was **a biological difference** between all the 70+ year olds ...

Something that could explain the vast difference in their brain health ...

And it was this substance called EGCG.

You see, EGCG is a plant compound. You can get it by eating specific types of plants.

The more EGCG the men and women consumed in their diets ... **the BETTER brain health they had!**

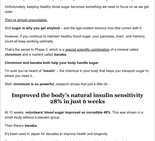
That's amazing! Actually, **stunning**.

When volunteers took EGCG in a soft drink and had their brains scanned, **a crucial part of their brains lit up like Christmas trees**.

Specifically, a region in your brain called the dorsolateral prefrontal cortex.

This area is essential for **your memory and focus**.

Here are images from the study showing this in real time:



Because of animal research, scientists from Germany have now discovered how it works so well ...

EGCG stopped amyloid from forming in the pancreas.

So it doesn't form the spots that end up in the brain ...

Now EGCG is pretty rare in large quantities, but small amounts are naturally found in certain kinds of **tea leaves**.

And scientists have now perfected a special technique that isolates this brain-supporting compound in the tea leaves ... **so you can use it powerful**.

With EGCG's unique ability to help **stop amyloid from forming**, so shown in animal studies ...

You can see why it's the cornerstone 2nd phase of **my memory solution for seniors**.

Imagine using a potent combination of these 2 compounds – the LC Particle and EGCG ...

The LC Particle gets back **fighting amyloid**.

So you could feel **your memory get better**.

Then, the **EGCG** goes to work, locking in the air after humans.

It helps stop amyloid forming in the pancreas.

Essentially... it helps to stop amyloid at the source – *so they never reach the brain*

And we're still not done...

Because we need to finish with **Phase 3**.

Let's quickly cover what it is, **and how you can easily use it** to protect your brain health.

Now, you learned how **Phase 1 reduces amyloid spots** using something called the LC Particle.

You learned how **Phase 2 was shown in an animal study to help stop amyloid from forming those nasty spots** in the pancreas, using EGCG.

Now it's **Phase 3**.

This final step is extremely important. You need to make sure **your body continues to process sugar the right way**.

Remember that your pancreas makes amyloid only when it has trouble with too much sugar.

But, as you get older, **your body stops being able to process sugar as effectively**.

Unfortunately, beating healthy blood sugar becomes something we need to focus on as we get older.

They're almost synonymous.

It's sugar is why you get amyloid – and the age-related memory loss that comes with it.

However, if you continue to maintain healthy blood sugar, your pancreas, brain, and memory could all keep working optimally.

That's the secret to Phase 3, which is a special scientific combination of a mineral called **chromium** and a carbon called **biotin**.

Chromium and biotin both help your body handle sugar.

I'm sure you've heard of "biotin" ... the vitamin that's long been known to support sugar in where you need it.

Well, chromium is as powerful, research shows that just a little bit.

Improved the body's natural insulin sensitivity 28% in just 6 weeks

At 12 weeks, **volunteers' blood sugar improved an incredible 46%**. This was shown in a small study without a placebo group.

Then there's **tonalin**.

It's been used in Japan for decades to improve health and longevity.

Research shows this active part of tonalin helped **improve blood sugar in healthy participants** ... even after they ate the same amount of sugar in 2 cans of cola!

Plus, another study showed how tonalin improved **blood sugar 28% in just 14 days** – even in people up to 70 years old.

If you're focusing on supporting your blood sugar, you already know how amazing these improvements are.

But now, because of the connection between sugar, your pancreas and amyloid, it makes sense that **your brain health could improve as well**.

As a controlled study showed **tonalin increased participants' satisfactories 47%** in just 30 days.

And chromium helps improve **a very important** aspect of memory...

Have you ever tried to remember someone's name and other names kept popping into your mind, like Eric Barry, Barnard ...

When the person's name is actually **Bob**?

There's a scientific term for that.

It's called intrusion error.

Instead of your mind going blank, you keep thinking of all the wrong answers.

And it's one of the **signs of age-related cognitive decline**.

Here's the good news.

A medical study tested chromium, and looked at exactly this kind of memory issue.

Volunteers with an average age of 73 took either chromium or a placebo (fake pill) for 90 days.

Then, they made short-memory tests designed to measure the volunteers and cause them to come up with all kinds of wrong answers.

The chromium-treated subjects made fewer intrusion errors. They made all kinds of mistakes.

But not the tasty volunteers who got **chromium**.

The trial showed chromium-taking volunteers made up to 140% LESS intrusion errors on the memory tests, compared to the placebo group.

Or, to say it another way ...

Their memories get BETTER

Chromium also helps **improve your mood**.

Imagine having a better memory ... and still feeling alert and awake after eating a heavy meal.

And when you have a tough mental task, **your memory is better**.

That's the power of this combination of blood-sugar balancing chromium and tonalin.

As you learned, both play very properly meaningful roles in your brain. **It could make all the difference for supporting your memory and brain health.**

Now imagine combining **all 3 memory-improving** ...

Your memory becoming sharper before your clock hits the next hour.

As the days go by, you are confident about your future ... **knowing that you're taking steps to support your brain health.**

And you FEEL transformed ...

Tasks that used to exhaust you could now feel **easy**.

You might have someone remark, **"Good memory!"** when you rattle off names and dates without even thinking about it.

At your next church gathering or family dinner, you entirely people with your stories. You feel **sharp and confident**.

I hope that sounds good because, **with a better memory**, it's more that possible ...

Okay, let's keep things up because we're covered plenty of ground today.

And it's time to show **how you can put all 3 Phases to work for your memory**.

Scientists have finally made the breakthrough we need to support our brain health as we age...

It turns out, "senior moments" and a foggy memory can come from **amyloid getting into your brain**.

And one of the causes of amyloid is **sugar**.

As you get older, your pancreas has more trouble processing sugar.

And memory-aging amyloid gets formed as it's produced.

That's the bad news. The **good** news ...

We know how to stop this chain reaction.

And help improve your memory...

First, we could help **reduce amyloid** by using something called the LC Particle.

That's Phase 1.

Next, we help **stop amyloid spots at the source** using EGCG.

That's Phase 2.

Finally, we help **keep your blood sugar healthy**, so your pancreas stays on top of things.

That's Phase 3.

This formula is the most advanced solution for supporting senior brain health you can get your hands on

It's absolutely light years beyond any big corporation's solutions. Do your learned today, they're all **FAILED**.

Fortunately, I uncovered the cutting-edge research.

That's when I began using this formula for myself.

The results have been nothing short of **astonishing**...

As you heard before, I'm over 60 years old.

And I'm reading mountains of scientific research day in and day out.

Take a moment and consider how **relaxed** you could feel when your brain is firing on all cylinders...

How much **frustration** do you have right now... that will simply disappear?

How sweet is your **relief** going to be?

And, let's be honest, how much **fun** are you going to have when you become the center of attention.

And start hearing whispers about **how amazingly sharp you are?**

Keep that in mind because ...

When I show you **how to get all 3 phases of this formula** in just a moment from now ...

Your memory could improve...

You can **support your brain** against sugar's effects...

And you could marvel at how **quick** your thinking becomes.

Now, as a doctor who took the Hippocratic Oath, it is my sworn duty to help those in need.

That's why I've done all the hard work of researching, rounding, and sourcing **all 3 memory-improving phases of this formula**.

And I've even assembled everything into **a simple pill**. That you can take from home in seconds.

It works so well. I can't wait to it my patients anymore ...

This groundbreaking pill is called **Memotea™**.

Memotea is my own private patient formula for supporting your brain and helping to improve your memory.

It contains the LC Particle, **EGCG, and the chromium-tonalin blood-sugar balancing combination you read**.

Before we go on, I need to be **Memotea is NOT for everyone**.

Now, if you've tried other memory supplements before, you've probably heard a lot of hype about how they are "clinically proven" to improve memory.

But what you've heard very likely isn't true.

Most of the ingredients in other memory supplements are based on "promising" research done on animals, or on tiny, poorly-designed human studies.

Sometimes, the ingredients don't even do what they're supposed to do.

Other times, they do, but they don't do it very well.

Or they do it well, but they don't do it in a way that's safe or healthy.

It's a complexity different class.

A whole different category really... simply because **it could help treat a root cause of age-related cognitive decline.**

If you're only in your 20s or 30s, it is not for you.

Memotex is specifically designed for men and women between the ages of 52 and 100

Someday, other brain formulas may catch up to the formula in **Memotex**. But, so far, nothing else even comes close.

So, if you are ready to improve your memory...

And perhaps help your spouse and friends do the same...

Then keep reading because in just a few minutes, you'll have your opportunity.

Now, I need to make clear that **Memotex** is available only through this presentation and Solaire Nutraceuticals.

Beware of imposters claiming they possess the complete formula.

The good news is, you don't need a prescription to get **Memotex**.

But for a long time, the bad news was... only patients at my medical practice could get this 3-Phase formula.

However, I've decided to release this formula on a **limited basis** to men and women over the age of 55...

Who are ready to use **the future of science to support their brains.**

Memotex contains everything you need for all 3 Phases of memory improvement and **brain upgrading.**

As you know, **the first phase could help combat amyloid.**

You do this by taking the first ingredient in **Memotex**, the **LC Particle**.

This stands for Lipid Curcumin, a special kind of curcumin that can cross the blood-brain barrier **6X better**.

You MUST use this **specific** *kind of lipid curcumin shown in the clinical studies to work.*

But even after use the right kind, you could reduce **amyloid specks**.

Remember, study participants who used the LC Particle **improved their memory in just 1 hour**.

And the perfect dose of the LC Particle is included in my **Memotex** formula.

Now, that's **Phase 1**.

Phase 2 is using **EGCG** shown to stop amyloid from forming in the panacea... which animal studies suggest...

Could reduce the amyloid getting to the brain in the first place

Finally, Phase 3 is using a special **combination of chromium and banaba** to help improve and balance your blood sugar.

So you can still be focused and alert even after a heavy meal.

Just from this third phase alone, **you could improve your wakefulness**...

And you could make fewer "intrusion errors" when you try to remember something.

Finally, you don't have to worry the next time you run into someone, you'll fumble when you try to remember their name.

You don't have to wonder what will happen as time goes on.

Instead, you can **rest easy, and enjoy discovering how much better your memory can get**.

You get to **look forward** to the next year of Golden Years.

By using the compounds in the **Memotex** formula, real people from the studies I told you about have achieved ...

Better calmness in the face of stress...

Less **fatigue**...

47% more **wakefulness**...

140% **lower** errors when trying to remember something...

And a **better memory** *in just 1 hour*...

Yes, this measurable change started in just 60 minutes.

Oh, and one more thing...

Because Phases 2 and 3 of this formula help improve how you digest sugar, they come with an *interesting "side effect."*

And it's a very good one...

Now, if you currently don't want to lose weight, that's fantastic.

But...

If you'd like to lose a few extra pounds, *I've got some great news*

All the compounds in **Memotex's** 2nd and 3rd Phases can naturally help you lose weight.

It's all because of how they help you **digest sugar**.

Here's what the research revealed:

Just taking banaba alone caused study participants to **lose almost 2.5 pounds in just 14 days**...

And taking EGCG alone caused a **3.5-pound weight loss and reduced the waist by 1 inch.**

This was shown in a Japanese study which also involved 14 days of dosing.

But most amazing of all is the chromium ...

Science shows just by taking chromium alone **study participants lost an average of 17 pounds in 90 days.**

So, if you're carrying any extra weight right now, I strongly suggest you get your hands on **Memotex** while you still can...

And even if you're not, the compounds in Phase 2 and 3 can help ensure you stay at a healthy weight.

Okay, I've shown you exactly how to help **improve your memory**, support your brain ...

And even help **balance your blood sugar** and drop extra weight as well.

Now it's time to show you how to get **Memotex** yourself absolutely risk-free.

When you think ahead to the next 10 years of your life, do you see how this could be one of **the most important decisions** you make?

The fact is, you can't know what you learned today.

You're standing at a crossroads. **You have only 2 choices**.

1. **You can do nothing**. You can accept that your body is making amyloid, causes pre-related memory loss and heavy thinking
2. Or... you can get your hands on the 3-Phase **Memotex** breakthrough... and start reducing brain draining amyloid

I sincerely hope the choice for you is clear.

However, if you delay, there's no guarantee you'll even be able to get a supply.

Finally, science has identified what's slowing down your memory... **and exactly how to stop it**.

And you can get your hands on it today, while it's still available.

With **Memotex, you could improve your memory.**

Imagine a retirement where you enjoy decade after decade of excitement and adventure...

Where embarrassing slip-ups and foggy moments are the last things you're concerned about.

This can be your future, as long as you have the 3-Phase formula.

Here's the complete breakdown of what you'll be getting in the daily dose of the **groundbreaking 3-phase Memotex formula**:

You get 400 mg of United States Patented **lipid curcumin** – the revolutionary LC Particle.

Which could start cleaning out amyloid specks, and help improve your memory...

You get 750 mg of green tea extract containing **EGCG** ...

Which has been shown in animal studies to help **prevent amyloid proteins from forming** in the panceas in the first place...

And 1,000 mcg of **chromium** and 96 mg of **banaba**, which can help your body process sugar...

And help **improve your wakefulness** and reduce your confusing "intrusion errors"...

All combined, these nutrients could help your **body remove some of the amyloid specks causing your memory lapses**.

Instead, you'll enjoy a *better, more focused* memory

That's why I worked with my team at Solaire Nutraceuticals to carefully combine this complete formula ...

Into **Memotex's** single, convenient capsule.

Memotex is absolutely top-notch, with the perfect advanced compounds to help you maintain healthy levels of amyloid in the brain.

And it will work for **you**.

Yes, **even if you've tried remedies for your memory in the past** but you never felt a difference.

This is based on the breakthrough science behind overloading brain health.

It could help address the **root cause** of brain aging: amyloid protein.

And it's backed by exciting animal studies and human clinical studies with real results in seniors like you.

Like all my Solaire Nutraceuticals formulas, **Memotex** is created in a certified facility right here in the United States. And it's also made with non-GMO ingredients.

In addition, taking **Memotex** is easy – just 2 tiny capsules a day.

Everything will happen just as you've learned about in this presentation.

Memotex is the exact formula you need, so you can **stop** feeling foggy, forgetful, or old...

And start **enjoying your supply life again**.

In a few moments, you'll see a button below this presentation. When you do, **press it quickly to reserve your own supply**...

As a Medical Doctor, I'm confident that **Memotex will do everything I've promised you today**.

But I don't want you to worry about whether it will work for **you**.

So I want you to **try Memotex today with ZERO risk**.

That's right... you have a **risk-free, unlimited guarantee** when you try **Memotex** today.

Here's how it works...

In a moment, reserve your personal supply of **memory-improving Memotex** today.

Then, when your package arrives in a week or so, open it immediately.

Follow the instructions and start taking **Memotex daily**.

Just take Memotex every day

You can notice your memory improve...

As time goes on, you can feel more mental focus and energy. Basically...

You can feel younger.

You'll feel **a happy** every time you need to focus on an afternoon project, or have an important conversation...

Or remember a name without even trying...

Because **Memotex** could help you fight a **true cause of brain fog and "senior moments."**

However, **if for any reason**, you aren't 100% satisfied, simply give us a call or send us an email...

And we'll give you back every penny of your most recent shipment, **no questions asked**.

Let me repeat that... **for any reason at all**, simply request a refund, and we'll be happy to oblige.

And...

Your guarantee NEVER expires

You can request a refund any time in the future — it could be 6 months from now... a year... *there is no limit or expiration*.

This way...

There's no pressure... and no risk... when you try Memotex today!

That's how I un-thinks and I'm extending that courtesy to you.

Of course, combining **all the nutrients in Memotex** that have been shown by science, isn't easy or inexpensive.

If you truly measured the **memory-improving** value of what **Memotex** delivers, we think it would be worth thousands of dollars.

However, because there is no "middle man" here, a one-month supply of **Memotex** normally retails for $299.

It's the bargain of a lifetime for improving your memory... but I know that's still a lot for many people.

So that's **not** what you have to invest today, because of this page's **special offer**:

You'll get an immediate $200 off, as an instant rebate.

That's just $199 for a full 1-month supply – a 50% discount. And you can choose **the life-changing results the very first day**.

Plus, if you choose a 3 or 6 bottle option, you **save EVEN MORE**.

Whatever option you choose, as long as you reserve your supply from this page ...

You'll see your **exclusive $200 rebate has already been applied**.

Remember, there's **no other formula available** that specifically helps address a root cause of memory issues.

And remember, you can try Memotex with ZERO risk

If **Memotex** doesn't improve your memory, focus, and brain power just the I've promised you...

In fact, if you're not satisfied **for any reason at all**...

Just request a refund and we'll gladly oblige.

No questions asked and no expiration dates.

But I don't think you'll want a refund.

Because Memotex works unlike any other memory solution in the world...

As you've learned, **Memotex** works because of the newest research on what could truly cause brain fog and general cognitive decline.

That's how it completely supports your brain... **and makes your memory much better**.

This is completely cutting-edge.

Because the 3-Phase Memotex formula helps support your brain, your memory, focus, and even improves your happiness.

It's be like a big free bagel to lift from you...

Realize you can **remember details** like names at the snap of a finger...

Blaze through books you want to read and navigate important conversations...

Tell spellbinding stories of adventures you enjoyed years ago...

And thoroughly **impress** your friends and family with how mentally sharp you are.

And remember...

This has all been shown by science

Remember, the users in the groundbreaking clinical research **improved their memory in just 1 hour, compared to the placebo group**.

And, if you have extra weight, this could help with that too... almost like magic. Study participants lost **an average of 17 pounds or more in 90 days**.

Ok, it's time for you to make the right decision ...

You could continue along the same path you're on now.

You already know how **embarrassing** it is to forget simple things...

Or have "senior moments" and brain fog...

You already know where this path is going to lead.

Unless you use **Memotex** to help reduce **the amyloid specks**, you could keep experiencing confusion and brain fog as time rolls on.

Your memory could get continue to get foggier. So could your focus.

Today, everything senior brain health has changed

Instead of denying yourself, make the decision to test out **Memotex**.

For a small investment, your memory and your brain health can improve...

With enhanced energy, clear thinking, and confidence.

With less amyloid, one of the live causes of age-related cognitive decline...

And your blood sugar balanced to help keep your brain healthy...

With **Memotex**, **you won't have to think about your brain health...**

And you won't have to feel old!

And very soon, **you'll get what I like to call the "Memotex Moment"**.

It could happen when you're having a meal with friends...

Or even after you try **Memotex** for the first time.

Either way, it'll be when you try to remember something – like a name from a few months ago...

And you get that familiar "on the tip of your tongue" feeling.

For an instant, you draw a blast blank...

Until the name suddenly POPS into your mind. *Like magic. Like it's supposed to be.*

That's when you realize, **Memotex** truly works.

As your focus and energy keep going up and up...

You realize this is *what life is like when your brain continues to have healthy levels of amyloid.*

All thanks to memory-improving **Memotex**.

You get to plan all kinds of adventures and live a retirement that others would envy **Without thinking about your brain health**.

Ok, are you ready?

When the button appears below, **click on it** and fill out your shipping information on the next page.

Once you complete your reservation, we'll begin packing your personal shipment of **Memotex** and **we'll mark it your way**.

Just a few short days from now, you'll receive a plain package from USPS.

Carefully packed inside will be your initial supply of **Memotex**.

I recommend you immediately bring your **Memotex** supply into your kitchen, open it up...

And take your first dose with water or the beverage of your choice.

Memotex's LC Particles can improve your memory.

You'll start *feeling* the benefits with a better memory...

And as the days, weeks, and months pass – **your brain could keep feeling sharper, stronger, and YOUNGER**.

If you wait to try **Memotex**, however, we might be completely sold out.

And because of the **ingredient combination** and special production process, it can take months for us to get more in stock.

So, please, **for the sake of your memory and your loved ones**, do not delay.

Try out memory-improving **Memotex** today. Remember, **you take NO RISK at all**.

It's time. Go ahead and **click the button below now**.

It will take you to our secure reservation page, where you can select your risk-free supply of **memory-improving Memotex**.

Do **click the button** now. *I'll see you on the other side...*

For **Memotex** and Solaire Nutraceuticals, I'm Dr. Richard Gerhauser, M.D.
