

Dermal Fillers

Over time there is a gradual loss of collagen which results in the development of static lines and wrinkles on the face. Dermal fillers offer a non-surgical cosmetic treatment of these static lines and are one of the most popular aesthetic treatments performed in facial rejuvenation at our clinic in Taunton, Somerset.

Restylane

What are Dermal Fillers?

Fillers are clear gels that contain clinically refined non-animal hyaluronic acid. **Hyaluronic Acid** is a naturally occurring substance in our body which helps hydrate and add volume to our skin. It decreases with age. Dermal Fillers offer a safe non surgical treatment to replace lost volume in static facial lines.

What Dermal Fillers do you use?

Three of the most scientifically researched dermal fillers are **Emervel**, **Juvéderm ULTRA** and **Restylane** and are three of the most popular dermal fillers currently used. Areas treated include the nasolabial folds (nose to mouth lines), vertical lip lines, oral commissures (corners of mouth) and the marionette lines.

Dermal Fillers should only be administered by individuals with the **appropriate training and qualifications**.

What does having Dermal Filler involve?

A detailed medical history is taken to establish that there are no contraindications to treatment. Pregnant and breastfeeding women cannot have dermal fillers nor those who are susceptible to keloid scars. Those with an allergy to lignocaine (a local anaesthetic) cannot have the treatment. After a careful assessment the dermal filler is injected into the specific anatomical region. Treatment takes approximately 20 minutes.

Are there any side-effects to having Dermal Fillers?

Common side effects include redness and swelling, though these will settle after 1-2 days. Bruising can also occur.

When will I notice any difference from having the Dermal Fillers?

The effects are immediate and can last up to 12 months. After this period re-treatment may be necessary.

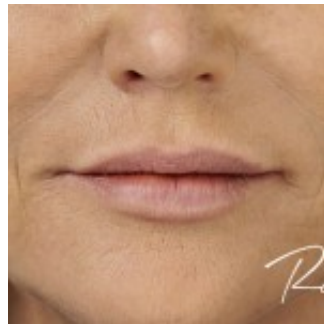

How much will it cost?

Skin Boosters (Mesotherapy)

Mesotherapy is a non-surgical cosmetic medicine treatment which we use to help overcome the ageing process which results in a loss of tissue elasticity.

What Skin Boosters do you use?

At Somerset Cosmetic Clinic in Taunton, we use **Restylane Vital** which is specifically designed to give your skin deep dermal hydration from within. The natural hydrating properties of **Restylane Vital** make it the obvious choice for skin areas that take on a dehydrated appearance with over exposure to the sun. These areas typically include;

- **The face**
- **The décolletage**
- **The backs of hands**

Restylane Vital Light is specifically designed to treat less photo damaged (sun damaged skin) and we use this for sensitive skin areas such as around the eyes and the top lip.

Restylane Vital Light is a safe and natural treatment for the revitalisation of thin and delicate skin. It restores the hydrobalance of the skin and improves elasticity and tone to create a fresh and natural look.

What does having Skin Boosters involve?

The procedure involves a number of injections into the mid dermis of the skin. For optimum results 3 treatment sessions, 2-4 weeks apart, are required which can be given from our Taunton based clinic. Effects last approximately 6 months.
