How Is Equinox Different from Others?

Many products have tried putting materials like collagen and elastin in creams, but they are not topically stable and won't penetrate the skin. Our revolutionary blend of raw materials will penetrate the skin, causing the body to increase its collagen and elastin production from within. Peptides, which act like synthetic protein, penetrate the skin along with a powerful proprietary blend that encourages collagen and elastin synthesis, as well as tremendous moisturization of the treated area.
