dermal fillers

Derma fillers are used to restore volume and hydration to the skin where needed. Volume can be restored to sunken cheeks, laughter lines softened and lips can be defined again. Noses can be improved in selected cases, resulting in a nose job without surgery. Volume to hands can give a more youthful, softer look and the decollete area can be hydrated. Scarring can also be softened by using dermal fillers.

At The Bosham Clinic, we mainly use fillers containing hyaluronic acid, which is a naturally occurring sugar in the body. Juvederm, Restylane, Emergel, Teosyal are well known. We also use Radiesse, which is a calcium hydroxylapatite suspended in an aqueous gel. This filler may sometimes be longer lasting and is excellent for facial contouring.

At the Bosham Clinic we use advanced techniques to give you an optimum result. All our injections are performed by experienced Doctors.
