

Which S&A newsletter has the best track record?

Retirement Trader has closed out ***an incredible 123 straight winning recommendation series*** since its inception in July 2010.

To date, it has the best track record of anything we publish...

"My favorite service is Retirement Trader. I am averaging over \$10,000 per month since I started in November 2011."

~ Aaron G.

My name is George Rayburn and I'm the Publisher of Dr. David Eifrig's *Retirement Trader* research service.

You may have heard of him before. Dr. Eifrig – or "Doc" as we call him – also writes *Retirement Millionaire*, one of our most popular publications.

Doc is a former trader with Goldman Sachs, which, since the 1980s has been using a powerful strategy to generate millions of dollars per year, while telling almost no one outside the firm how they do it.

For the past three years, Doc has been using this unusual strategy to show his *Retirement Trader* readers how to generate instant income with little risk.

In fact, during that time, Doc has closed out 123 winning series of plays... with not a single loss so far.

I realize this is hard to believe. I certainly never thought we'd have an analyst on board whose closed recommendations could have made money *every single* time.

So what is the unusual strategy he's used so successfully?

It's an options transaction called selling naked puts... and it can help you collect small amounts of cash – on average, \$100 to \$600 at a time – without buying any stocks to begin with.

Very little has been written about this type of transaction, but we found one article that was published six years ago in *Barron's* magazine. The writer said this transaction "*makes money nine times out of 10.*"

It's actually very simple...

If you can understand buying a house, you can understand how this type of option works.

Let's say you're familiar with a particular neighborhood and the values of the homes in it. And let's say you see an attractive little house for sale and figure paying \$200,000 for it would be a good deal.

The thing is, you're not interested in a "good" deal. You're interested in a GREAT

deal. You'd love to buy the house for \$170,000.

Here's where a put option comes in...

You approach the owner of the house and start talking. He's nervous real estate is about to hit the skids again, causing the price of his home to sink even further, and scaring off would-be buyers.

You tell the homeowner: "Well, you never know what will happen. But I think I can help you out. I'll agree to buy your house for \$170,000 if you want to get it off your hands. That offer is good any time for the next three months, no matter what happens."

The nervous homeowner agrees to your offer... He's happy because now he knows he can at least be guaranteed to get \$170,000 for his home, so he's willing to pay you \$5,000 in cash to seal the deal.

Sounds pretty good, right? You're getting paid to do something you'd be willing to do anyway.

There are two ways the deal could work out:

1) Let's say home prices in the neighborhood remain robust. The homeowner either decides to keep the house himself or finds someone to buy at \$200,000. And you keep the \$5,000 free and clear. The transaction is finished... over... done.

Or, 2) the value drops and no one's biting at \$200,000, so the homeowner sells you the house for \$170,000 (remember, that's a GREAT deal in your opinion). And you still get to keep the \$5,000 he paid you to agree to this deal in the first place.

It's win-win.

Of course, you probably aren't going to shop for a house this way... But you *can* use this strategy to buy stocks.

You can actually get paid to simply agree to buy already beaten-down stocks – stocks you want to own – if they get *even more* beaten down in price.

And you don't have to buy the stock upfront to take part in the trade. That's why they call it selling *naked* puts.

For example...

Let's say you've wanted to buy shares of software giant Microsoft (MSFT), for the last several years. As I write, the stock sells for a little over \$34 a share. At this price, you think the stock is a great bargain.

But rather than buy shares outright and wait for the price to appreciate, you sell a naked put instead, agreeing to buy Microsoft stock if it drops to \$33 a share or less, within the next eight weeks.

By doing this you can collect an instant payout of \$52... \$104... even \$520. That payout is called a cash premium, which is paid to you no matter what happens to Microsoft's share price -- whether it goes up, down, or sideways.

Again, there are two possible ways the deal can work out:

1) The share price does not fall to \$33 within the next eight weeks. You keep the cash premium and walk away without having to buy anything.

2) Microsoft's share price drops to \$33 or below over the next eight weeks. You buy Microsoft's stock at the bargain-basement price of \$33 and get to keep the cash premium.

As you can see, you win either way.

Of course, no financial transaction is void of risk, but selling a naked put properly, and on the right kinds of companies, is about as close to no-risk as it gets.

Done right, selling puts is a great income-generating strategy as well as an opportunity to lower the cost of buying stock you want to buy anyway.

Check out just a few of the emails we frequently receive from readers who are using this strategy successfully:

"I average an annual return of 75% on my money.
[Selling puts] is the holy grail of investing."

- Mickey G.

"I made over \$13,000 in January 2012 and about
\$75,000 last year with the help of this strategy."

- Bill C.

"Shhhh! Would you please pipe down about the put
selling already!! We've got a good thing going here
and if you let the buyers know then they'll become
sellers and there won't be anyone left to bid up
the premiums! Thanks to S&A I'll be retiring in
August at age 58."

- Joseph J.

"I would say writing puts is the single greatest
strategy I have employed since I subscribed over 1
year ago. Why didn't I think of this sooner?"

- John K.

In short, the goal of *Retirement Trader* is to show people how to generate instant income through safe option trades.

2000

As I mentioned, since its inception *Retirement Trader* has generated a perfect closed track record – 123 series of straight wins.

Now does that mean it's going to remain perfect forever? Of course not. But I can tell you that it's the best track record of any service at S&A research.

If this sounds like something that interests you, then let me show you what to do...

How to start collecting a stream of instant income

One full year of Retirement Trader costs \$1,000, and for most folks, that's not

One full year of *Retirement Trader* costs \$4,000, and for most folks, that's not cheap. But considering the sophisticated nature of the content we're providing, I believe it's a steal.

The fact is... you could make that money back within a few months.

For example, one *Retirement Trader* reader, Richard P. told us he's up \$8,480 on two trades since starting his subscription.

Kevin R. has already made "\$60,000 in 10 months" with Doc's research.

And subscriber Henry D. says he has collected about \$35,000 in put premiums.

We believe *Retirement Trader* can help you collect a steady stream of income, without taking big risks.

Of course, I can tell you about how successful this service has been... but the best way to judge is to check it out for yourself.

So I propose you take the next three months to give *Retirement Trader* a look...

Three months will give you plenty of time to decide whether Doc's work is right for you. If, for whatever reason, it doesn't meet your expectations, or you find this kind of investing is not a good fit for you, just let us know and we'll give you a refund (minus a 10% handling fee).

(We impose this small fee to keep out the "tire kickers" who sign up just to access all our Special Reports and archive of recommendations... then cancel. Believe it or not, there are people who do this.)

Also, keep in mind that should you change your mind after your three-month trial is up, you can still receive a refund on the remaining portion of your subscription.

Here's what you'll receive as a new *Retirement Trader* subscriber:

- On the second and fourth Friday of each month, Doc will email you with a *Retirement Trader* alert, and brief you on what he's looking at. It's important to read these email alerts as soon as you get them, to see how much money you could collect. You must be quick to get in.
- Then, throughout the month, Doc will be in touch with you by email – as needed – to let you know of any important updates.
- You'll also have immediate access to the *Retirement Trader* website, where you'll find an exclusive primer Doc has prepared for you: ***The Black Book of Trading Secrets***. Don't worry, it won't take you long to read through it and learn everything you'll need to get started right away.
- You'll also receive full access to his online training videos, which are intended to supplement the primer above.
- And please make sure you check out the other special reports Doc has prepared too. For instance, ***The No.1 Way to Protect Your Portfolio*** is a must-read special report. It addresses one of our cardinal rules in *Retirement Trader*.

Remember, we're not asking you to commit to anything when you subscribe. We're asking only that you try Doc's research to see if you like it.

I think you'll find *Retirement Trader* to be more than worth the price.

To get started immediately, simply fill out the Order Form below.

Sincerely,

George Rayburn
