

# Is Fed Chair Ben Bernanke's \$10,000/Month "Side Income" Ethical?

## Fed Chairman discloses he's been collecting \$10k/month from a non-gov't source, since 2008

And it's making him privately rich. Full story in this presentation...

Dear Reader,

It's public knowledge that Ben Bernanke makes \$199,700 per year as Chairman of the Federal Reserve.

But what most people don't realize is that the "most powerful financial figure in America" is also tapping into a super-secret income stream — something I call the "Mainz" income stream — which has enabled him to collect an average of more than \$10,300 per month, since 2008... effectively DOUBLING his government salary.

That's a total of more than \$600,000... and growing.

What's more, this income stream is funded by a completely PRIVATE, non-government source.

Who is the source?

I'll share with you the full details in just a moment...

But first, let me show you the really incredible thing about this story...

You see, the Fed Chairman isn't the only one in D.C. taking advantage of this secret.

This type of income stream is so potentially lucrative that many of the biggest names in our nation's capital — those who know the ins and outs of this secret thanks to their connections — are also using it to earn considerable paydays, outside of their regular earnings

outside of their regular earnings.

For example, former U.S. President Bill Clinton also uses this super-secret income stream (he's made more than \$84,550 **PER MONTH** over the past several years).

Former Vice President Al Gore used this secret to **generate more than \$1,440 per month for more than 20 consecutive YEARS.**

This opportunity isn't limited to just the Democrats either. Alaska Governor Sarah Palin, Arizona Senator John McCain, and former President George W. Bush are all taking advantage too.

The list goes on...

Former Louisiana Governor Edwin Edwards collected more than **\$8,300 per month thanks to this secret.**

So, how come you've never heard about this before?

Well, quite simply because the majority of people taking advantage of these income streams aren't too eager to talk about them with the public.

As Thomas M. Rees, former Democratic Representative from California said of his "Mainz" income stream, **"It's one of my most closely guarded secrets."**

But what's perhaps most surprising is that just about anyone can use these secret income streams to generate huge amounts of income. In other words, they ARE NOT reserved solely for politicians, public officials, or government employees.

In fact, different versions of these amazing income streams are quietly being used right now by hundreds of everyday Americans just like you and me who want to earn significant amounts of cash.

60-year-old real estate appraiser Maury Sauer from Arkansas says of this secret:

**"I got a check for over a million in less than 2 weeks. I just didn't get used to it. Gosh, it was like damn. Somebody hands you a million dollars, and you have to think about it for a while."**

Lorene Wilkes, 64, a banking consultant from Mansfield, LA, who brings in more than \$19,500 per month thanks to this secret, says:

**"It's unreal. It's just overwhelming... It's like we're in a dream. I keep thinking we're going to wake up."** Lorene and her husband Ron have already paid off their home loan... and plan to retire early.

Jason Redtree, 72, a former county judge and rancher from Texas says:

**"It's better than the state lottery."**

Edward Velasquez, 64, from Florida, says:

**"For the first time in my life I'm able to hit it big."**

Derek Rudy, a civil engineer from Ft. Worth, Texas says:

**"We call it mailbox money. A lot of people are going to be getting it..."**

Hi, my name is Matt Badiali. I'm a financial analyst at Stansberry & Associates... a research firm that is constantly on the lookout for great new ways to make money. I've spent the better part of the past seven years digging up the details of these little-known income streams.

I strongly believe that once the "Mainz" income stream gains more attention among American retirees, you're going to hear a lot more about it.

In fact, the *Washington Post* recently wrote an article on the subject and reported, "Some people are becoming millionaires overnight."

The purpose of this report is to show you exactly how to take advantage of this unusual income secret.

Here's how it all works...

**"It's going to put a bunch of money in a lot of people's pockets..."**

*--David Rice, 67, White County, AR*

It's not hard to see how the "Mainz" income secret could have a profound impact on your retirement...

Just listen to the story of a man named David Rice and you'll see exactly what I mean.

Born and raised in Judsonia, Arkansas, about 30 minutes west of Little Rock, Rice is your average, hard-working American.

He drove a delivery truck for most of his life... well into his 60s. Near the end of his career he was making \$11 an hour. But then an illness forced him to give up work and retire on disability.

It wasn't much to live on.

"I've never made big money," Rice said. "Me and my wife just pinched pennies."

But that all changed in 2005 when Rice stumbled upon a new way to generate

...but what has changed in 2008 when Rice stumbled upon a new way to generate large amounts of income...

**In short, Rice uncovered a little-known business secret anyone can take advantage of in more than a dozen industries... everything from music, electronics, art, computers, restaurants, fashion, energy, and publishing, just to name a few.**

In short, through a unique investment most people have never even heard about Rice earned the right to collect more than \$5,000 per month... a number that will actually increase over time, according to the *Arkansas Times*.

As Rice says, "It's going to put a bunch of money in a lot of people's pockets that didn't have any money. It's like a gold rush."

I'll tell you exactly what this secret source is in just a moment, and the easiest and most lucrative way I've been able to find for you to get in on the action.

You see, over the past few months, I've met, corresponded with, and profiled dozens of people who have taken advantage of this situation...

The best part is, ANYONE can do it.

John Zimski, from Tavares, TX who had been working 2 jobs for more than a decade to support his wife and three children says, **"You still get up in the morning and you don't know if it's true or a dream."**

Jessica Phillips, from Twin Falls, ID, who made more than \$58,000 per month said, **"I guess I am the luckiest girl in the world."**

Linda Sharpe, from North Dakota, who for decades worked as a sales clerk at a small department store says, **"It's the easiest money we've ever made."**

George Hanks, from Abilene, TX, who gets a check in his mailbox every single month says, **"It's a sweet deal. I'd recommend it to anybody. It's like manna from heaven."**

Heck, I even found a 10-year old girl named Shannon Ricks from Winston, Oklahoma who made more than \$100,000 PER YEAR thanks to this business secret.

So how does this secret work? Where does all this money come from? And how can you start collecting today?

Let me show you...

## **Get Paid Over and Over Again, For Life**

In every industry there's usually a backdoor way to get paid OVER and OVER

IN EVERY INDUSTRY THERE'S USUALLY A BACKDOOR WAY TO GET PAID OVER AND OVER again for a single idea, property, or patent.

In the drug business, for example, the big money is in patents.

After all the work is done developing a new drug, for example, a scientist can partner up with a larger company to handle the expenses and risks of testing, marketing, and distribution.

Then the patent holder gets paid for every prescription that gets filled. The guy who developed the popular pain medication Lyrica, for instance, shares in more than \$2 million per month because he owns the patents. The ladies who owned the patents on the anti-fungal medicine Nystatin shared in more than \$50,000 per month.

In the publishing business the big money is in royalties.

Once you do all the work writing a book, you just sit back and collect your share of the profits.

Federal Reserve Chairman Ben Bernanke, for example, makes on average more than \$10,000 PER MONTH from the sales of several college textbooks he's written.

In fact, this is why we call it the "Mainz" income stream secret.

You see, the Guttenberg Press, which was invented in Mainz, Germany, is generally considered the invention that first made collecting regular royalties possible, by allowing book publishers and authors to make a fortune after creating a valuable piece of work.

And to this day, the "Mainz" secret remains one of the great low-risk ways to get rich in America.

You make just one investment... or control one valuable asset... and then get paid over and over again, while somebody else takes the risk of marketing, development, and distribution.

Now... don't get me wrong... I'm not saying you should go out and develop a new drug, or write a book, or record a record, or anything like that.

You see, what I've found is that there are some incredible (and low risk) ways to use this secret as an investor. In short, you avoid all the normal risks of doing business... and simply collect incredible royalty streams for owning a very valuable asset.

For example...

Did you know that one of North America's best fast-food chains A&W, allows you to collect tremendous royalties, every single month, simply by becoming an owner of their "trademark"?

You simply become a part owner of the trademarked name (like "McDonald's" or "Burger King" for example... but in this case you own "A&W"). Then, every time one of these 700 restaurants sells a burger, shake, or fries... you collect royalties.

The beauty of this arrangement is that your cut comes right off the top!

In other words, it doesn't matter how much the rent of the store costs, or how much electricity the store uses, or if labor costs go up. You get paid a royalty based on the initial sale – so none of the normal costs of doing business really affect your cut.

Do you see why this can be so powerful... a much better way of investing your money than owning a traditional stake in a typical business?

Again, you make just one investment... and then get paid over and over again.

This opportunity gives you a 3% royalty on all sales at a popular fast-food restaurant that's been around since 1956. These stores raked in \$800 million last year.

All you own is the trademark... yet this incredibly valuable asset allows you to receive a royalty check at the end of every month – 12 total per year.

Since this trademark went public in 2002, investors have received a royalty payment every single month. That's 140 months in a row... and counting. Royalty payments have increased by more than 200% over this time. The total return has been 193%. (Keep in mind that during the same time the S&P 500 went up about 45%.)

And get this...

There's another little-known stock market opportunity in the music business that allows you to own the rights to royalties from a catalog of over 25,000 copyrighted songs.

Again, you simply become a part owner of the music (including songs such as The Little Drummer Boy, Stardust, and works by Bing Crosby and Duke Ellington). Then, every time one of these 25,000 songs gets played on the radio, television, or in the movies... you collect royalties.

This unique opportunity has paid consecutive royalty dividends every year since 1965. A \$25,000 investment at the time of inception would be worth well over \$170,000 today.

And the earliest copyright expiration isn't until 2024.

And get this... former Beatle's guitarist Paul McCartney was reportedly once the largest shareholder!

Again, you avoid all the normal risks of doing business... and get paid over and over again, simply for owning an incredibly valuable asset, which will pay you a steady income stream for years to come. That's the "Mainz" income secret in a nutshell.

But here's the thing. You can invest in the opportunities I've just described... and you'll probably do OK.

But the way to make a lot of money with this secret is to invest in an industry where profits and demand are practically certain to go up.

And there's just one industry I can think of that falls into this category...

## **What is it?**

Let me give you a few hints...

This industry is responsible for what is probably the most profitable and valuable asset on the planet.

You and I use it every day. Americans alone spend over half a TRILLION dollars PER YEAR on this.

The businesses operating in this industry are among the most profitable on the planet. Three of the top four firms in America last year (in terms of revenues) were in this business. They made more money than Apple, Google, General Electric, and pretty much every other publicly-traded company.

The all-time record for profits earned in a single year belongs to one of these companies (\$45 BILLION).

I'm talking, of course, about the oil & gas industry.

Did you know that Americans consume more than \$632 BILLION worth of oil and gas PER YEAR?

Crazy, right?

So, the question is... how can you use the "Mainz" income secret to tap into this extremely lucrative industry?

**Well, I believe that one of the easiest and safest ways to turn a small investment into an incredible income stream over the next few years is to own royalty interests in the world's most profitable industry.**

In other words... your only investment is in the ownership of the valuable asset... the oil or gas field.

This way, you avoid all the risks and expenses of the energy business... and simply collect royalties, year after year.

Incredibly, many of these royalty interests are bundled into vehicles and are listed and traded on the New York Stock Exchange... so you can buy and sell them just like a regular stock.

You might be wondering why you would want to own royalty interests on the stock market rather than traditional oil and gas stocks.

There are two compelling reasons.

## **Reason #1 -- Bigger Potential Returns**

The first reason you should own royalty interests over traditional oil and gas stocks is that the returns can actually be much, much higher.

Take Exxon, the world's largest oil company, for example.

Exxon owns and operates oil and gas fields all over the world. Exxon sells so much oil that it generates more than \$1.1 BILLION PER DAY (that's about \$412 BILLION per year in revenue)! It's also paid a dividend for over 100 years and increased its dividend every year since 1983.

In fact, in 2008 Exxon recorded the most profitable year ever by a publicly traded company – \$45 BILLION.

It was the most profitable company in 2012 too, beating out Apple, Google, Wal-Mart, and Bank of America for the top spot.

In short, Exxon has easily been one of the safest and most profitable investments over the past few decades.

\$100 into Exxon stock 25 years ago would be worth more than \$1,590 today – a gain of more than 1,500%. Not to mention, the massive oil company hasn't missed a quarterly dividend payment during that time.

You simply can't compete with numbers like that...

Or can you...?

Let's see what happens when you compare owning a complicated and expensive business like Exxon to owning a little-known oil and gas royalty stream.

One income stream, for example, enables you to collect royalties from more than 2 MILLION acres of resource-rich land in Florida, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas – many of the same areas that Exxon uses to produce oil and natural gas.

So how does an investment like this compare to one of the most profitable companies in history?

Well, to be honest, it isn't even close...

A \$100 investment in this little-known royalty stream would be worth... well... more than \$500,000 today.

You heard that right. That's a 500,000% return on your money.

In other words, that's about 300-times more profitable than owning Exxon over the same period!

That's enough to turn just \$100 into more than \$500,000... or \$5,000 into more than \$25 million.

Remarkable, isn't it?

Instead of collecting a 1,500% return as most Exxon shareholders did, those who took advantage of oil and gas royalty interests could have collected more than 500,000% returns over the same period.

I should also note that you would have also collected HUGE royalties every single month during that time – 12 per year. **That's 297 consecutive royalty checks...** and counting.

Of course those returns are great.

But the real question is: How have royalty streams like these performed for real world investors? Has anyone actually seen such enormous gains?

Here are a few people who've written in recently on the subject:

Jay M. of Montauk, NY told us: **"This has been my most rewarding investment in recent years. I've made gains in excess of \$300,000."**

Ken H. from Damascus, MD said: **"If you don't do this, you're missing the boat. I have made approximately \$60,000 - \$70,000. Easily the best investment I've ever made."**

Nick G. from Tulsa, OK told us, **"I'm sitting on more than \$1.6 MILLION thanks to this secret. This is a long-term investment that I'm not touching."**

Ralph S, of Junction City, Co. said, **"I like the idea of sitting back and collecting the revenue streams... I'm up over 335% so far!"**

How can this be?

How can an investment you've likely never heard about simply squash the returns of the world's biggest and most profitable company?

Well...

That brings me to the second reason why you should own royalty interests over ordinary oil and gas stocks...

Investors who take advantage of these royalty streams take on LESS RISK.

Let me show you what I mean...

## **Reason #2 -- Safety**

In short, owning royalty interests on the stock market is a lot safer than owning ordinary oil stocks.

You see, big oil and gas companies – companies that explore and produce oil and gas – take on all kinds of risk. They spend tremendous amounts of money identifying a target oil deposit... exploring it... developing it... and building the infrastructure to drill and transport the oil.

For example, deep water drill rigs can cost as high as \$500,000 PER DAY to rent. If a well takes 30 days to drill, that's \$15 million! Then you have materials... remember you are putting pipes over 2 miles into the ground. That'll cost another \$7.5 million!

Plus, I haven't even mentioned the costs of labor... insurance... permits... storage... and the hundreds of other pieces of super-expensive equipment you need to explore for and produce oil.

The point is, the entire process for finding, producing, and transporting oil can

cost hundreds of millions, if not, billions of dollars.

Royalty interests aren't designed this way.

You see, with royalties you don't take on the risks of exploration, development, or building of oil and gas infrastructure. You're simply acquiring a right to the income from some of America's biggest and richest producing oil and gas fields. Then, every time one of these operations sells a barrel of oil or a cubic foot of natural gas... you collect a royalty.

Here's a perfect example...

Most people have no clue that you can collect royalties from the largest producing oil field in the U.S... the Prudhoe Bay oil field on Alaska's North Slope. Over the past 35 years, this massive oil field has produced more than 11 BILLION barrels of oil.

But here's the thing. British Petroleum (BP) does all the actual work getting the oil out of the ground.

I'm sure I don't have to tell you what a disaster it would have been to invest in BP over the past few years. They had that catastrophic oil spill in the Gulf of Mexico in 2010. Shares dropped 50% in a matter of weeks. There were lawsuits... fines... investigations. It was a giant mess.

To this day, the stock *still* hasn't fully recovered.

But get this...

If you simply owned the royalty rights to the Prudhoe Bay oil field – which are also listed and traded on the New York Stock Exchange – you would have taken on virtually NONE of that risk.

Remember, with oil and gas royalty investments you avoid all the normal risks and expenses of the energy business... and simply collect a huge percentage of the income from operations year after year.

And because of this secret, the gains in 2010 were... well... amazing, regardless of the oil spill.

Have a look at what happens when you compare the Prudhoe Bay royalty stream to BP shares that year.

**Royalty Stream vs. BP in 2010**

The Prudhoe Bay royalty stream shot up 65%, while BP shares DROPPED 23%. Not to mention, the royalty investment sent out 4 big checks in 2010.

Of course, the whole BP fiasco seems like a once in a couple decades' fluke – not representative of the industry as a whole.

So how does the Prudhoe Bay royalty investment compare to other oil and gas companies over the long term?

Well, this income stream has returned more than 32,000% over the past 24 years.

That's more than 19-times better than Exxon's share performance over the same time (who went up 1,669%)...

And it's more than 16-times better than one of the industry's biggest producers, Chevron (who went up 2,010%).

In fact, it's beaten just about every other major oil company over the same period including Shell, ConocoPhillips, Marathon, Total... you name it.

That kind of return turns a \$100 investment into more than \$32 000 or \$5 000

... INTO MORE THAN \$1.6 MILLION.

Don't forget, you would have also collected royalties every single quarter for the past 24 years. **That's 94 consecutive payouts.**

Like I said, you avoid all the normal risks of doing business... and simply collect incredible streams of income for owning a very valuable asset.

The way I see it, you can take your chances with ordinary companies and hope they find oil and gas and produce it profitably... or you can simply get paid for owning the royalty interests and potentially make a fortune.

I personally believe these royalty streams are the perfect investment...

Both in terms of risk – and reward...

But don't just take my word for it:

John T. from Gallup, NM told us, **"I made a 392% profit in just 3 years. This is one of, if not, the best investments I've made."**

**"I'm up 460% so far! This has offset some of the dumb choices I've made over the years. I'm looking forward to a few extra bucks in the account at retirement time,"** says Lenny H. from Portland, OR.

Henry D. from Coconut Creek, FL told us: **"I'm making 180% PER YEAR thus far. This investment has easily outpaced both bullion and ETFs!"**

**"Even for a dumb investor like me, it's proven to be a big winner,"** says Benjamin T., of Westport, CT. **"You're an idiot if you don't take advantage of this."**

If you're as excited about these opportunities as I am, let me show you how to take advantage of the situation immediately...

## How To Get Started

My name, as I mentioned earlier, is Matt Badiali.

I've been a geologist for my entire 20-year career. In that time I've worked on drill rigs, taught at three prestigious universities, spent years in the field, and in laboratories. I've also presented my scientific research at high-level geologic conferences as well as to companies like Anadarko and ExxonMobil.

However, for the last 8 years, I've been researching investments in the precious metals and energy industries...

What it all boils down to is twenty years of seeing how the whole industry works

...that it all comes down to a very, very few of seeing how the market really works, from top to bottom.

So a few years ago, I decided to start putting my expertise to work in the world of finance.

Why?

Because I realized that someone with my level of expertise could make a killing in the markets – especially on energy and commodity related investment opportunities.

So I now spend every day analyzing the best investment opportunities in the energy and precious metals fields... and reporting my discoveries in a research advisory called *The S&A Resource Report*.

For the past 6 months I've been looking very closely at the one of the oil and gas industry's best kept investment secrets... the royalty interests I've been describing in this report.

If you're interested in getting the full details, I would like to give you access to, absolutely free, my full Research Report on the subject called *Oil and Gas Royalties: The Real Secret to Generating Huge Returns in America's Petroleum Markets*.

This Research Report details everything you need to know to take advantage of my favorite royalty investments in the oil and gas industry right now, including:

***Why right now is the best possible time to get into oil and gas royalty streams.***

***My top "MUST OWN" oil and gas royalty investments, which are paying huge annual distributions...in the 10%-15% range and are located in an area industry experts are calling "one of the nation's hottest oil plays." (Most Blue Chip dividend stocks, by the way, pay a 2%-4% yield. The yields you can get from these royalty streams are 5 - 10 times bigger.)***

***Why the value of these investments will continue to soar in the coming years.***

***How to participate by purchasing shares, which are listed right on the New York Stock Exchange...***

***How and when you'll receive your royalty checks...***

***And so much more...***

And because you'll be collecting royalties in an industry where prices and demand

are almost guaranteed to soar over the next few years, you could generate huge profits that multiply exponentially every year... without doing an ounce of work.

You should know that while incredible capital gains are often made with royalty companies, the current market environment means the wealth you could accumulate with these stocks will likely come primarily from their current income streams. Most of my favorite royalty companies are paying annual distributions in the 10%-15% range. Their share prices could rise considerably if oil and gas shoot higher, but I'm expecting the bulk of the gains to come from these income streams.

Just to be clear, turning \$1,000 into a million dollar gain isn't something you should expect going forward.

But even so, the returns from these oil and gas royalty investments, I believe, will be far greater over the next few years than any other oil investment... or the stock market for that matter. It's reasonable to expect a gain of 200% - 400% over the next two or three years.

No matter how you look at it, these royalty streams are probably one of the easiest and safest ways to turn a small investment into an incredible income stream over the next few years.

It's all there in my Special Report, *Oil and Gas Royalties: The Real Secret to Generating Huge Returns in America's Petroleum Markets*.

Even better, I'd like to give you access to this research free of charge.

It's actually the first thing you'll have access to when you try a subscription to my monthly investment advisory letter, called *The S&A Resource Report*.

But, before you decide if my work is right for you, let me show you something else I've spent an extraordinary amount of time investigating in recent months...

## **How The Rich Make a Fortune During a Currency Crisis**

A few years ago, I learned about a very clever strategy, which allows you to protect the value of your current savings during a currency crisis like the one we are experiencing today...

And at the same time potentially see gains of 165% or more.

It's a strategy that enables you to benefit from a unique set of assets that will do spectacularly well as the U.S. government continues printing money.

Now this has nothing to do with gold or silver or any other type of precious metals investment. Also: You don't have to open up a foreign bank account, or speculate in foreign currencies, or anything like that.

In fact, what I want to introduce you to is something that is very easy to buy and sell, from any regular broker. That's why some of the world's best investors use a strategy that is very similar to what I'm going to show you how to do.

For example, you might have heard of Ken Fisher.

He runs Fisher Investments, a money management firm for about 25,000 wealthy individuals (you typically have to have at least \$500,000 to get started).

Well Ken Fisher recently took more than \$200 million worth of his firm's money, and put it to work using a similar strategy to the one I want to show you how to implement.

By putting this strategy to work back in 2004, you could have seen gains of 150% in less than a year.

Of course, there are many other multimillionaire investors and money managers now taking advantage of similar strategies too, including: Chris Davis, Ron Baron, Monish Pabrai, Ken Heebner, and Andreas Halvorsen.

Perhaps you've never heard of these guys, but they are some of the richest and most powerful men in the financial sector.

Monish Pabrai, for example, is typically referred to as the "next Warren Buffett." He manages more than \$500 million and after starting his fund in 1999, earned 600%+ gains for his investors (after fees and expenses) in just his first 8 years in the business.

Ron Baron is one of the 300 richest men in America according to *Forbes*. Chris Davis' business manages more than \$93 billion.

And ALL of these guys are making a critical move with their money to protect and grow it over the next few years. I want to show you how to do the same thing.

Very rarely do you get the chance to make simple yet sophisticated financial moves, along with some of the richest people in the country, but that's exactly what I'm going to show you how to do.

We'll show you how to make nearly the exact same move as these very wealthy guys – which will potentially earn you a small fortune. I realize I'm being a bit vague about it here... but it's important to keep this strategy to ourselves.

Keep in mind, starting back in the middle of 2005, this strategy produced gains of over 800%, in just three years.

The good news is, now is the perfect time to do it again.

Everything you need to know is in our new Research Report: ***How The Rich***

EVERYTHING YOU NEED TO KNOW IS IN OUR NEW RESEARCH REPORT. ***HOW THE RICH Make a Fortune During a Currency Crisis.***

This report is yours free of charge when you take a trial subscription to my monthly research advisory, ***The S&A Resource Report.***

Is the type of research I do appropriate for you?

Of course, I can't say for sure.

But to help you decide, here's what I propose:

Try ***The S&A Resource Report*** for the next four (4) months, at no obligation.

Here's what I mean...

Simply start a trial subscription today, and you'll have instant access to:

- Research Report #1 – ***Oil and Gas Royalties: The Real Secret to Generating Huge Returns in America's Petroleum Markets.***
- Research Report #2 – ***How The Rich Make a Fortune During a Currency Crisis.***

Plus, every month you'll receive my ***Resource Report*** advisory letter, delivered to you on the first Wednesday of each month, first by e-mail, then by regular mail too. You'll also receive our daily market reports, sent by e-mail, also at no extra charge.

Over the next four months, take your time and decide if ***The S&A Resource Report*** is right for you. If not, just let me know, I'll send you a FULL refund, and you can keep everything you've received up until that point.

How much does ***The S&A Resource Report*** cost?

I think it's ridiculously cheap, especially considering all you receive, and the time, money, and effort we put into this work. The truth is, just one of the investment ideas I'll share with you could help you make many times the subscription price.

And it's not just me saying this...

**"I think that The S&A Resource Report provides the best financial recommendations I have ever had, bar none... Parker Drilling Co. I bought at \$2.75 and now it is at \$5.07 for an 84% increase. Thanks, and keep up the great suggestions."**

– Doug Patelli, Albany, NY

**"Matt, I have used your research a lot. On Northern Dynasty Minerals I made 167% and on Parker Drilling Company 161%."**

– Karl Blanchard, Austin, TX

"I have bought stock in the four companies you mentioned and as of today **my profits are in excess of \$4,000**. Far better results and profits than any previous service."

–Jared Plumber, Tacoma, WA

"Sold Rowan Companies and a total of \$2,265.08. As you can see I'm way head of the game. Thanks to your letters... **[I'm] up \$31,552.93 to date for this year.**"

–Jason Murdock, Dover, DE

Before I give you the details on how to get started, however, there's one more royalty opportunity I'd like to tell you about...

## **How to profit from soaring food prices**

It's been said that food could soon become more valuable than gold or silver.

Now, I know it's probably hard to imagine a serious food shortage in America...

But just consider that in 2008, Josette Sheeran, head of the United Nations World Food Program called rising food prices a "silent tsunami" that will likely affect more than 100 million people worldwide.

In 2010, famed investor Jim Rogers echoed this sentiment by saying, "sometime in the next few years we're going to have very serious shortages of food everywhere in the world, and prices are going to go through the roof."

If you've been to the grocery store any time over the past several months, you've undoubtedly noticed this trend...

The price of ground beef in the U.S., for instance, is up 13.4% over the past year.

The price of chicken: up over 12%.

Steak: 9%

Peanut butter: 11%

Coffee: 7%

Corn prices throughout the last year have gone up as much as 50%!

And it's not just in the U.S.

In Britain, for example, food prices are rising 3-times faster than the average worker's pay!

In France, potato prices have soared from \$40 a ton to \$330, an 8-fold increase.

And things are only getting worse:

Rising global food demand will push up prices 10 to 40 percent over the coming decade, according to the Organization for Economic Cooperation and Development.

Combine that with a soaring global population and you'll see just how serious this trend is.

Bottom line: If the world wants to avoid a major food crisis there's only one thing to do: Increase crop yields significantly.

And that creates an unbelievable opportunity for the companies that make and distribute the world's leading agricultural fertilizer products.

I recommend you buy these companies immediately.

One of these companies, for example, is an \$11 billion global leader in fertilizer manufacturing and distribution. It's the second largest nitrogen fertilizer producer in the world and the third largest phosphate fertilizer maker among publicly traded companies. Last year, the company earned an average of a 52% gross profit on its fertilizer production. That's an incredible profit margin for any business... but it's simply unbelievable for a company in the agriculture business. According to Capital IQ, the average agricultural company earns less than 27% gross profit.

I believe this opportunity could help make you a fortune in the years to come.

I can't say too much more about this opportunity here. Just that this situation is unfolding rather quickly and owning these fertilizer stocks right now – today – could be one of the smartest financial decisions you ever make.

You'll get the full details in my new report as soon as you sign up for a trial subscription to *The S&A Resource Report*.

Here's how to get started...

## **How to get started**

The price of *The S&A Resource Report* is normally \$99 per year.

But today I'd like to offer you the chance to try my research for 60% OFF the regular price.

You'll pay just \$39 for an entire year of my work, including:

- Research Report #1 – *Oil and Gas Royalties: The Real Secret to Generating Huge Returns in America's Petroleum Markets.*
- Research Report #2 – *How The Rich Make a Fortune During a Currency Crisis.*

- Research Report #3 – *The World's Best Fertilizer Companies*.
- 12 Issues of my monthly investment advisory newsletter, *The S&A Resource Report*, delivered on the first Wednesday of each month

Why so cheap?

Well, I figure the best advertising for my research is to let you see the actual work and the results for yourself. And to encourage you to give it a try, I'd like to give you the opportunity to review *The S&A Resource Report* at the cheapest price we've ever offered it.

And remember: You'll have the next four (4) months to make up your mind.

In other words, you are only agreeing to try my work to see if you like it.

If not, no problem. Just let me know and I'll send you a full refund – 100%. Everything you receive between now and then is yours to keep, my compliments.
