

GATEWAY TO ADDICTION?

A Survey of Popular Electronic Cigarette Manufacturers and Targeted Marketing to Youth

April 14, 2014

A report written by the staff of Senator Richard J. Durbin (D-IL), Representative Henry A. Waxman (D-CA), Senators Tom Harkin (D-IA), John D. Rockefeller IV (D-WV), Richard Blumenthal (D-CT), Edward J. Markey (D-MA), Sherrod Brown (D-OH), Jack Reed (D-RI), Barbara Boxer (D-CA), Jeff Merkley (D-OR), and Representative Frank Pallone Jr. (D-NJ)

Executive Summary

Electronic cigarettes, also known as e-cigarettes, are battery-operated products designed to deliver nicotine, flavor and other chemicals.¹ They contain cartridges filled with flavors and chemicals, including the highly addictive substance nicotine, which are vaporized into an aerosol that is inhaled by the user. Many e-cigarettes are manufactured to look like conventional cigarettes and mimic the act of smoking.²

According to the Centers for Disease Control and Prevention (CDC), e-cigarette use is growing rapidly.³ However, these products are currently not subject to federal laws and regulations that apply to traditional cigarettes. For example, federal laws and regulations prohibit traditional cigarettes from being sold to persons younger than 18 years of age, distributed as free samples, advertised on television and radio, and having characterizing candy and fruit flavors that appeal to children. There is no federal ban on the use of such tactics by e-cigarette manufacturers. In the absence of federal regulation, some e-cigarette manufacturers appear to be using marketing tactics similar to those previously used by the tobacco industry to sell their products to minors.

To address growing questions over e-cigarettes and the marketing of these products, on September 26, 2013, Senator Richard J. Durbin (D-IL), Representative Henry A. Waxman (D-CA), Senator Tom Harkin (D-IA), Senator John D. Rockefeller IV (D-WV), along with Senators Richard Blumenthal (D-CT), Edward J. Markey (D-MA), Sherrod Brown (D-OH), Jack Reed (D-RI), Barbara Boxer (D-CA), Heidi Heitkamp (D-ND), Jeff Merkley (D-OR), and Representative Frank Pallone Jr. (D-NJ) launched an investigation into the practices of nine commonly sold e-cigarette brands. This report draws from written responses provided by the companies in response to this investigation. In instances where companies did not provide complete responses or simply did not respond to a question, supplemental information was gathered from company websites and through reviewing other publically available information.

Findings in Brief

The findings of this analysis demonstrate the need for the Food and Drug Administration (FDA) to act quickly to issue e-cigarette regulations.

Major findings:

- All surveyed companies appear to use various marketing practices that appeal to youth. For instance:
 - Eight e-cigarette companies promote their products through sponsored or sampling events, many of which appear to be youth-oriented. In 2012 and 2013 alone, six of the surveyed companies sponsored or provided free samples at 348 events.⁴
 - Seven e-cigarette companies air television and radio advertisements during events and programs, including those with youth viewership. Blu's commercials "have aired thousands of times at various times of the day and night on 48 networks," and NJOY has advertised during programs including the Super Bowl, an event that reaches a substantial audience of youth under age 18.
- Six e-cigarette companies market e-cigarettes in flavors that could appeal to children and teens. For example, e-cigarette manufacturers are marketing flavors like Cherry Crush, Chocolate Treat, Peachy Keen, and Grape Mint.
- E-cigarette manufacturers have significantly increased marketing spending, more than doubling expenditures between 2012 and 2013. In total, six e-cigarette companies spent \$59.3 million in 2013 to market e-cigarettes.

Additional findings:

- There is wide variation in e-cigarette industry point-of-sale practices. One e-cigarette company reported that it does not maintain any policy barring sales to minors. Other companies have policies barring such sales, but these vary in scope and the level of company oversight.
- Four e-cigarette companies use celebrity spokespeople to market their products and depict e-cigarette smoking as glamorous. For example, celebrities have appeared in advertisements and at a prominent music festival.
- Seven e-cigarette companies utilize social media to promote their products. While some companies impose age restrictions to prevent youth access to their Facebook, Twitter, and YouTube content, three companies – Eonsmoke, VMR, and Lead by Sales – do not utilize any age restriction options for social media accounts.

- E-cigarette product warning labels lack uniformity and may confuse consumers. While some manufacturers' warning labels are succinct, make clear that e-cigarettes don't offer health benefits, and detail the health risks associated with nicotine, others do not.
- Six e-cigarette companies support some form of regulation, such as restrictions on the sale and marketing of e-cigarettes to children and teenagers, a ban of the usage of television to market e-cigarettes, a prohibition on characterizing flavors, restricting online sales, and regulation of e-cigarettes at the point-of-sale.

Recommendations

- 1) FDA should promptly issue deeming regulations asserting authority to regulate e-cigarettes. Responses from manufacturers indicate that overall the industry is supportive of some federal oversight.
- 2) Research shows that nicotine exposure has adverse health consequences for youth. Companies should take immediate action to prevent the sale of e-cigarettes to children and teens under the age of 18.
- 3) FDA should issue regulations to prohibit the sale of e-cigarettes to any person under the age of 18, including requirements for age-verification and face-to-face sales, and limits on purchases through vending machines.
- 4) FDA should ban and companies should cease marketing e-cigarettes in ways that are attractive to children and teens under the age of 18, such as the use of characterizing flavors that appeal to children and teens, distributing free samples of e-cigarettes, and product promotion through social media, sponsorship of events, and other activities that are intended for a youth audience. FDA and the Federal Trade Commission (FTC) should work to enforce restrictions.
- 5) E-cigarette manufacturers should refrain from the use of television and radio advertisements.
- 6) FDA should require strong, uniform labels to inform consumers of health risks and should prohibit misleading product claims.

Background

In recent years, there has been a significant increase in the popularity of electronic cigarettes. Electronic cigarettes, also known as e-cigarettes, are battery-operated products designed to deliver nicotine, flavor, and other chemicals.⁵ They contain cartridges filled with flavors and chemicals, including the highly addictive substance nicotine, which are vaporized into an aerosol that is inhaled by the user.⁶ Many e-cigarettes are manufactured to look like conventional cigarettes and mimic the act of smoking.⁷

E-cigarette use is growing rapidly, particularly among teenagers. Between 2010 and 2011, the number of U.S. adults who had tried e-cigarettes doubled.⁸ A Centers for Disease Control and Prevention (CDC) study issued in September 2013 found that in just one year, from 2011 to 2012, the percentage of high school students who had used e-cigarettes more than doubled from 4.7% to 10%.⁹ More than 20% of the middle school students who reported using e-cigarettes said they had never tried traditional cigarettes. Sales data support public health evidence illustrating the growing popularity of e-cigarettes, with sales doubling every year since 2010 and projected to reach \$2 billion in 2013.¹⁰ Moreover, at least one Wall Street analyst projects that the consumption of e-cigarettes will overtake traditional cigarettes in the next decade.¹¹

In spite of the growing consumption of e-cigarettes and the fact that there has been limited research on their health effects, e-cigarettes are currently unregulated by the Food and Drug Administration (FDA). Unlike traditional tobacco products, e-cigarettes are not subject to federal age verification laws and can be legally sold to children unless state or local laws bar their sale to minors. Presently, 28 states prohibit the sale of e-cigarettes to minors.¹² Table 1 shows examples of federal regulations over the manufacturing, sale, and marketing of cigarettes that currently do not apply to e-cigarettes (see Table 1).

Table 1: Comparison of Federal Restrictions on Cigarettes and E-Cigarettes

Federal Restrictions	Cigarettes	E-Cigarettes
Sales Restrictions		
Prohibition on the sale to any person younger than 18	✓	
Age-verification before purchase	✓	
Penalties against retailers who sell to minors	✓	
All sales must be based on face-to-face transactions i.e., no vending machine sales or self-service displays (except in adult-only facilities)	✓	
Prohibition of free samples	✓	
Marketing Restrictions		
Prohibition of tobacco brand sponsorships of sports and entertainment events	✓	
Prohibition of non-tobacco gifts with purchase of a tobacco product or in exchange for coupons	✓	
Warning labels required	✓	
Product Regulation		
Prohibition on characterizing flavors such as cherry, strawberry, grape, etc.	✓	
Ingredient disclosure	✓	
Required listing of harmful and potentially harmful constituents	✓	
Required disclosure of all documents of health effects of products	✓	
Obligation to respond to FDA request for information regarding product and marketing research	✓	
Manufacturers must register and list all products	✓	
Prohibition of claims that product is less harmful without prior FDA review and permission	✓	
Review of new products before going on the market	✓	

For more than four decades a federal ban on cigarette ads for radio and television has helped to deglamorize smoking for young people. But now e-cigarette makers are using a broad range of marketing techniques previously employed by traditional cigarette companies to entice young people to use their products. These marketing techniques include advertisements and product placement with celebrities; sponsorship of events frequented by youth; distribution of samples;

sales of e-cigarettes with flavors that appeal to children, such as “Cherry Crush” and “Chocolate Treat”; and making e-cigarettes easily available to children and teens under the age of 18 both online and during in person shopping experiences, such as at mall kiosks.

E-cigarette manufacturers are currently not required to disclose to FDA a list of all ingredients, potentially harmful constituents, and documents on their products’ health effects. Although there is limited data on the health effects of e-cigarettes, decades of research summarized in the 2014 Surgeon General Report suggest that exposure to nicotine in youth increases the risk of nicotine addiction and that nicotine exposure during adolescence, a critical window for brain development, may have lasting adverse consequences.¹³ The 1988 Surgeon General’s Report, *The Health Consequences of Smoking: Nicotine Addiction*, states that “nicotine is a psychoactive drug with actions that reinforce the use of tobacco...and that causes addiction.” The report goes on to say that, “the pharmacologic and behavioral processes that determine tobacco addiction are similar to those that determine addiction to drugs such as heroin and cocaine.”¹⁴ A 2007 study found that teens can begin to feel powerful desires for nicotine and demonstrate addictive behavior within two days of first inhaling traditional cigarettes.¹⁵

FDA’s webpage on e-cigarettes states that “E-cigarettes have not been fully studied so consumers currently don’t know the potential risks of e-cigarettes when used as intended, how much nicotine or other potentially harmful chemicals are being inhaled during use, or if there are any benefits associated with using these products.”¹⁶ The few studies that are available show variation in the amount of nicotine delivered to the user by different products (even within the same brands), from virtually no nicotine absorbed by the user to just as much nicotine as a cigarette.¹⁷ In addition, several studies show that e-cigarettes produce more than just nicotine vapor and water. The vapors generated by e-cigarettes have been found to contain toxins, including formaldehyde, acetaldehyde, acrolein, volatile organic compounds like toluene, tobacco-specific nitrosamines, and metals like cadmium, nickel, and lead.¹⁸ Though levels of these compounds are generally much lower than those found in mainstream cigarette smoke, they are nonetheless among those identified as harmful or potentially harmful substances by the FDA.¹⁹

While several e-cigarette companies have made claims about the potential of their products to assist in efforts to quit smoking, e-cigarettes could also increase public health risks by serving as a more socially acceptable gateway for non-smokers to pick up the habit. Additionally, the lack of data substantiating the cessation potential of these products or comparing their efficacy to other FDA regulated cessation tools underscores concerns regarding dual use of e-cigarettes and traditional cigarettes, especially when such dual use serves to delay successful cessation efforts. Especially troubling is the marketing and sales of e-cigarettes to youth, which has the potential to lead to early and long-term nicotine addiction that carries serious and chronic health consequences.

E-cigarettes are an emerging, heavily marketed nicotine delivery product, and federal regulations have not kept pace with the increasing popularity of these products. The 2014 Surgeon General Report states that, “we need to monitor patterns of use of an increasingly wide array of tobacco products across all of the diverse segments of our society, particularly because the tobacco

industry continues to introduce and market new products that establish and maintain nicotine addiction.”²⁰

The Family Smoking Prevention and Tobacco Control Act of 2009 (Tobacco Control Act) gave FDA the statutory authority to regulate e-cigarettes, which could subject them to evaluation and marketing restrictions.²¹ FDA can do so by issuing deeming regulations that declare these products as tobacco products under the Tobacco Control Act.²² In April 2011, FDA issued a notice of intent indicating that it would issue deeming regulations, but the agency has not yet done so.²³ The findings of this investigation reveal that e-cigarette companies are taking advantage of the regulatory vacuum that currently exists to market their products to youth.²⁴

Investigation

To address the growing consumer concern over e- cigarettes and the marketing of these products to young people, key Senate and House members launched an investigation into the practices of nine of the largest electronic cigarette manufacturers (see Table 2). The investigation was initiated by Senator Richard J. Durbin (D-IL); the Ranking Member of the House Energy and Commerce Committee, Representative Henry A. Waxman (D-CA); the Chairman of the Senate Health, Education, Labor and Pensions Committee, Senator Tom Harkin (D-IA); and the Chairman of the Senate Commerce, Science, and Transportation Committee, Senator John D. Rockefeller IV (D-WV), along with Senators Richard Blumenthal (D-CT), Edward J. Markey (D-MA), Sherrod Brown (D-OH), Jack Reed (D-RI), Barbara Boxer (D-CA), Heidi Heitkamp (D-ND), Jeff Merkley (D-OR), and Representative Frank Pallone Jr. (D-NJ).²⁵ Each company was asked to respond to a series of questions seeking information related to:

- the marketing and advertising practices employed by companies to target youth audiences;
- steps taken by companies to restrict the marketing and sales of e-cigarettes to minors;
- types of warning labels on electronic cigarettes; and
- the use of advertising claims suggesting health benefits or reduced exposure to potentially harmful or addictive substances.

Table 2: E-Cigarette Manufacturers Surveyed

Manufacturer	Altria	R.J. Reynolds Vapor Company	NJOY	Eonsmoke	LOGIC	VMR	Lorillard	Green Smoke	Lead by Sales
Brand(s)	Mark-Ten	Vuse	NJOY King	Eonsmoke	LOGIC	V2, Vapor Couture	Blu	Green Smoke	White Cloud Cigarettes

With the exception of Lead by Sales LLC, the maker of White Cloud Cigarettes (White Cloud), all companies responded to the letter. Two companies – Altria and Green Smoke – did not provide complete responses.²⁶ In instances where companies did not provide complete responses or simply did not respond to a question, supplemental information was gathered from company websites and through reviewing other publically available information. This report presents the information gathered in response to this investigation.²⁷

In February 2014, five months after the launch of this investigation, Altria agreed to purchase Green Smoke. This report presents responses from both companies before the acquisition and treats them as separate companies for the purposes of this investigation.

Findings

FINDING 1: Many surveyed e-cigarette companies are promoting their products through sponsorship of youth-oriented events, and some companies are offering free samples of e-cigarettes.

Two important prohibitions and restrictions contained in the Tobacco Control Act related to advertising and product sampling apply to tobacco products such as cigarettes and smokeless tobacco, but currently do not apply to e-cigarettes. First, the Act prohibits tobacco product sponsorship of sporting, entertainment, or other cultural events under the brand name of cigarettes or smokeless tobacco.²⁸ Such sponsorships can provide the impression that tobacco use is part of an active lifestyle and tie the products to celebrities and athletes.²⁹ Second, the Tobacco Control Act prohibits and restricts the dispensing of tobacco product samples.³⁰ This investigation has found that e-cigarette manufacturers are exploiting the absence of regulations by sponsoring dozens of athletic, musical, social and cultural events that appeal to youth and dispensing product samples at sponsored youth-oriented events.³¹

Six of the surveyed e-cigarette manufacturers – R.J. Reynolds, NJOY, LOGIC, VMR, Lorillard, and Green Smoke – reported that they have sponsored events. And eight of the e-cigarette companies – Altria, R.J. Reynolds, NJOY, LOGIC, VMR, Lorillard, Green Smoke, and Lead by Sales – distributed free samples at promotional events. In 2012 and 2013 alone, six of the surveyed companies sponsored or provided free samples at 348 events, many of which appear geared toward youth.³² (see Appendix 1 for a list of all sponsored or sampling events reported by the surveyed companies).

For instance, last year Lorillard indicated that it had sponsored at least 13 high profile music festivals, parties, and motorsports events, including the Bonnaroo Music Festival and numerous Grand Prix auto racing events. In the past two years, Lorillard alone participated in or provided free e-cigarette samples to attendees at 227 events. A review of publicly available websites found that Lorillard was also the exclusive sponsor of the Freedom Project (see Figure 1)³³, a nationwide tour starring a number of bands and musicians.

Figure 1

According to the company's press release:

“As the exclusive sponsor of the Freedom Project, blu eCigs has committed to transform each performance into an interactive experience, providing fans a platform for self-expression and personal freedom. Echoing blu's brand message, each concert will feature a Freedom Wall where guests can inscribe their most enjoyable freedoms and freely embrace the everyday liberties of being an American.”³⁴

LOGIC has also sponsored music events and NJOY has sponsored high-profile events like Coachella Music Festival and Mercedes-Benz Fashion Week.

Our investigation found that Lead by Sales promotes Operation Comedy Ha Ha, a partnership through which the company sponsors up-and-coming stand-up comedians touring the throughout the United States.³⁵ After the performance, free disposable White Cloud e-cigarettes called Flings are offered to patrons.

The company describes the program as follows:

We at White Cloud are interested in one thing, and that is having a good time. Whether it is by providing e cigs that allow smokers to enjoy nicotine indoors, or entertaining and informing our customers through social networks, we want everyone to enjoy life and always have a good time. We know everyone loves to laugh and we are happy to announce that we are now officially in the comedy business. We have teamed up with several national comedians and they are bringing Flings to all of their shows. Check out our roster of comedians and make sure you stop by one of their shows. You will not be disappointed. Have a laugh and while you are at it have a Fling!³⁶

Figure 2 demonstrates how White Cloud street team and models were passing out Flings at the 2012 Red Bull Wake Open.

Figure 2

FINDING 2: Surveyed e-cigarette companies market e-cigarettes in flavors that appear to be designed to appeal to youth.

The Tobacco Control Act restricts the distribution and sale of cigarettes with characterizing flavors, such as strawberry, grape, or chocolate.³⁷ No such ban applies to e-cigarettes. As a result, manufacturers are free to use child-friendly flavors to attract young customers and they are doing so.

Six of the surveyed companies – R.J. Reynolds, VMR, Lorillard, Eonsmoke, Green Smoke, and Lead by Sales – use a wide range of e-cigarette flavorings that could appeal to youth (see Table 3). All companies manufacture menthol flavored e-cigarettes.^{38,39}

Figure 3

R.J. Reynolds offers e-cigarettes in eight flavors such as Rich Mint, Crema, and Chai.

VMR offers 42 flavors such as Strawberry Champagne, Pineapple Luau, Snappin' Apple, Rodeo Drive, and Bombshell. Lorillard offers seven flavors such as Cherry Crush, Vivid Vanilla, and Piña Colada. Eonsmoke carries 16 different flavors including Chocolate, Strawberry, Cherry, and Mojito. Lead by Sales offers e-cigarettes in 19 flavors including Peach Pit, Strawberry, and Chocolate (see Figure 3).

Figure 4

Green Smoke offers eight flavors, including Smooth Chocolate and Vanilla Dreams (see Figure 4).

Table 3: E-Cigarette Manufacturers' Use of Characterizing Flavors

Manufacturer	Flavors	Number of Flavors
Altria	Classic, Menthol	2
R.J. Reynolds Vapor Company	Original, Menthol, Mint, Rich Mint, Spearmint, Wintergreen, Crema, Chai	8
NJOY	Traditional, Menthol	2
Eonsmoke	Cartridges- Cherry, Tobacco, Menthol, President, Wrangler, Chocolate, Coffee, Sands, Vanilla, Mint, Mango, Apple, Strawberry, Mojito, Grape Mint, Frost E-Liquid- Apple, Strawberry, Vanilla, Mint, Cherry, Kiwi Strawberry, Blackberry, Grape Mint, Mango, Platinum Tobacco, Grape, Chocolate	16, 12
LOGIC	Menthol	1
VMR	Red, Sahara, Congress, Menthol, Peppermint, Green Tea Menthol, Cherry, Coffee, Vanilla, Cola, Grape, Chocolate, Rodeo Drive, Bombshell, Fresh Mint, Passion Fruit, Strawberry Champagne, Arctic Mint, Turkish Tobacco, Pumpkin Spice, Mango, Caribbean, Clove, Columbian, Java Jivin' Coffee, Peachy Keen, Snappin' Apple, Pineapple Luau, Traditional, Cherry Blast, Sweet Vanilla, Coffee Roast, French Vanilla, American Ranger, Refined Blend, Menthol Breeze, Cinnamon, Chocolate Treat, Escape, Tobacco, Mint Tea, Peppermint Ice	42
Lorillard	Vivid Vanilla, Cherry Crush, Magnificent Menthol, Classic Tobacco, Java Jolt, Piña Colada, Peach Schnapps	7
Green Smoke	Absolute Tobacco, Red Label Tobacco, Tobacco Gold, Menthol Ice, Menthol Clove, Mocha Mist, Vanilla Dreams, Smooth Chocolate (Also a variety pack)	8
Lead by Sales	Regular, Apache, Bora Bora, Atlantic-Cut, Menthol, Snap!, Iced Berry, Zero K, Strawberry, Bad Apple, Peach Pit, The Lime & The Coconut, Banana, Vanilla, Chocolate, Espresso, Kick!, Cin, Clove	19

FINDING 3: E-cigarettes are available for purchase in stores and online by children and teenagers.

The Tobacco Control Act prohibits the sale of cigarettes and smokeless tobacco products to individuals under the age of 18 and purchases of these products require face-to-face contact with the retailer, who must verify that a purchaser is at least 18 years old. The Tobacco Control Act also prohibits vending machine sales except in limited situations and the sale of packages with fewer than 20 cigarettes.

Because the FDA has yet to issue regulations asserting authority over e-cigarettes, no such federal restrictions apply to e-cigarettes. Twenty-eight states have prohibited the sale of e-cigarettes to minors, but in other states, no such protections are in place and industry self-regulation is the only way to prevent minors from purchasing e-cigarettes. Industry responses show significant variation among companies in their effort to restrict sales to minors.

Five companies require retailers to sign contracts agreeing to not sell their products to purchasers under the age of 18. Two other companies have similar restrictions in place, but they only apply to vendors that participate in promotional programs or with which one company has a "direct relationship." One company did not report to have any policy or contract with vendors barring the sale of their products to minors. Given the varied scope and company oversight of these policies, their effectiveness at restricting sales to minors is unclear.

Three of the surveyed companies require vendors to display their products behind the counter or where they are accessible to the public only through direct contact with a sales clerk. Two other companies have similar restrictions in place, but they only apply to vendors that participate in promotional programs or with which one company has a "direct relationship." One company "instructs its retail vendors to allow access by the public only through contact with a sales clerk." To purchase another company's products, a consumer must enter into a face-to-face transaction where they must establish that they are an adult. A third company "requires vendors to display...products either through enclosed displays or behind the counter." Further, according to the merchandising plan agreements of another company, the e-cigarette products must "be displayed behind the counter or only through direct contact with a sales clerk."

Three e-cigarette companies do not impose restrictions on the placement of their products. While one company "requires vendors to agree to its Sales Practices Policy, which requires sales clerk involvement in all retail sales transactions to perform age verification," the company does not require "behind-the-counter placement of its products, where 'Big Tobacco' has already acquired prime placement." The second company does not require "its products to be sold in a non-self-service manner" though the company claims to "strongly encourage" retailers to do so. The third only requires vendors in California to display its products behind the counter.

Only three of the eight companies periodically monitor vendors for compliance with these policies, meaning that, for most companies, even if policies are in place, it is difficult to see how they ensure compliance.

In addition to selling products in brick and mortar stores, seven of the nine surveyed companies also sell their products online. R.J. Reynolds and Altria do not currently sell their products online. Among the companies that allow online sales of products, the responses indicated wide variation in the use of age-verification to limit access to their website and to purchase their products.

Among the seven surveyed companies that sell e-cigarettes online, Green Smoke, VMR, and Lead by Sales allow access to their sites without any age verification or confirmation. Three companies – NJOY, Lorillard, and Eonsmoke – require the user to click a button verifying that they are 18 years of age or older in order to gain access to the website. Prior to completing an online purchase Lorillard, NJOY, LOGIC, and VMR require the consumer to provide information that is used by a third-party system, such as Experian, Aristotle, or Veratad, to verify that the purchaser is of legal age.⁴⁰

Although Altria and R.J. Reynolds do not sell their e-cigarette products online, both companies have product websites. General access to company owned websites exposes youth to pro-e-cigarette images and unsubstantiated claims about e-cigarettes. Altria's website allows access without any age verification or confirmation. Altria and R.J. Reynolds' e-cigarette sites were the only ones that required registration of a full user profile before one is able to enter their full site. R.J. Reynolds also offers information on its website about how to use age filtering browser tools such as Net Nanny and Safe Eyes.

FINDING 4: Surveyed e-cigarette manufacturers have significantly increased marketing expenditures.

The manufacturer responses show that tens of millions of dollars are spent each year to market e-cigarettes, and that these advertising expenditures by e-cigarette manufacturers have skyrocketed in recent years.

Six of the surveyed companies provided marketing expenditure data, and these companies spent a total of \$59.3 million on advertising and promotion in 2013. Five companies provided expenditure information for 2012 and 2013, and these five companies increased spending by 164% in this one-year period. One company's marketing expenses increased by 300% and another company's marketing expenses increased by 352% (see Appendix 2 for a list reported marketing and advertising tools used by surveyed companies).

FINDING 5: Many surveyed e-cigarette companies air television and radio advertisements, often with celebrity spokespeople, including during events and programs with youth viewership.

The Public Health Cigarette Smoking Act, which was signed into law on April 1, 1970, prohibits the airing of cigarette ads on television and radio. The importance of the current ban on tobacco ads was reinforced in the recent Surgeon General's report, which concluded that "the evidence is sufficient to conclude that advertising and promotional activities by the tobacco companies cause the onset and continuation of smoking among adolescents and young adults."⁴¹

E-cigarettes are not subject to the federal ban on television and radio advertising. Manufacturers are taking advantage of this regulatory vacuum to air advertisements during events and programming with high levels of youth viewership. Seven of the surveyed companies – Lorillard, R.J. Reynolds, VMR, LOGIC, NJOY, Eonsmoke, and Green Smoke – have used radio and television advertisements to market their products (see Appendix 3). Of the eight companies that responded, Altria is the only company that does not air radio or television ads.

While eight companies have policies or guidelines for media buying targets that restrict advertisements to audiences under the age of 18, these policies vary and are not always in written form. For example, four companies restrict media buying to programs where 85% or more of the audience is over the age of 18. One company targets advertising to an 18 and older audience. Another company states that it targets "only adult tobacco smokers" and another states that it targets "35-65 year olds," while a third company limits radio-based marketing to audiences where 70% or more is above the age of 21. Three companies stated that they have media buying policies but they are not currently in written form.

It is not clear that these policies are effective. Seven of the e-cigarette companies run television and radio advertisements. NJOY has advertised its products on both radio and television. NJOY's ads have appeared during programs such as the Super Bowl, the Academy Awards, and on ESPN, programs that reach substantial audiences of children and teens.⁴² For example, in 2013 NJOY reportedly reached 10 million viewers through advertising during the Super Bowl,⁴³ an event that is "the highest-rated shows across all age groups." The 2013 game averaged a 30.2% rating with teens and a rating of "21.8% with kids 2-11."⁴⁴ Green Smoke aired "2,188 radio ad spots in nine local markets in the last calendar quarter." Green Smoke reported that in seven days, from November 18 to 24 of 2013, the company had aired 50 television spots in eight local markets.

Blu has reported airing two prominent television commercials featuring celebrity spokespeople Jenny McCarthy (see Figure 5) and Stephen Dorff.

Figure 5

According to Lorillard, “the commercials have aired thousands of times at various times of the day and night on 48 networks.” Our investigation found that Blu ads have aired nationally between episodes of the popular show “Breaking Bad” and on Comedy Central where the target audience is young males, including on the network’s show *Workaholics*.⁴⁵

Celebrity endorsements, once used by tobacco companies, are now employed by e-cigarette manufacturers to depict e-cigarette smoking as glamorous, rebellious, sexy, and masculine. Four surveyed companies – Lorillard, Green Smoke, NJOY, and Lead by Sales – have used or currently use celebrity spokespeople (see Appendix 2).

Since April 2012, Lorillard reported promoting Blu e-cigarettes at Indy Car events by Graham Rahal, Bobby Rahal, and Mike Conway. Blu e-cigarettes also indicated that its products have been placed in music videos for Natalia Kills and Major Lazer, and the company films celebrities visiting Blu-sponsored events. Eonsmoke reported that it does not utilize celebrity spokespeople, but the company cited one instance of purchasing a product placement advertising opportunity during a music video featuring Sevyn Streeter and Chris Brown. NJOY has hired one celebrity spokesperson, Courtney Love, who has appeared in a YouTube video and at the Coachella music festival. Green Smoke reported that the company occasionally uses testimonials from celebrities to market its products. NASCAR driver T.J. Bell has also promoted Green Smoke’s products.

Figure 6

In the absence of an explicit celebrity endorsement, many e-cigarette companies seek to highlight instances in which celebrities are using their products (see Figure 6).

FINDING 6: Surveyed e-cigarette companies extensively utilize social media and product websites to promote their products.

E-cigarette companies have embraced social media as a way to reach new customers and promote their products. This is a potential concern because marketers have recognized social media sites as an avenue through which to engage with predominantly youth audiences. In spite of the significant online presence by e-cigarette manufacturers, there is wide variation in their use of available tools to limit access to websites and social media by individuals under the age of 18.

Seven of the surveyed companies – Eonsmoke, LOGIC, Lorillard, NJOY, VMR, Green Smoke, and Lead by Sales – use social media sites such as Facebook, Twitter, Pinterest, YouTube, and Instagram, to promote or market their e-cigarette products (see Table 4). E-cigarette companies have widely differing policies to address minors’ access to their social media websites. In many cases it is not possible for the companies to limit access: Instagram and Pinterest have no age restriction functionality, and Twitter and YouTube only provide age restriction features to certain advertising partners.

Three of the eight companies with social media accounts – Eonsmoke, VMR, and Lead by Sales – do not utilize any age restrictions to limit access, even where age restriction functionality is available.

Table 4: E-Cigarette Manufacturer Social Media Age Restrictions

Manufacturer	Social Media	Social Media Age Restrictions ⁴⁶
Altria	N/A	N/A
R.J. Reynolds Vapor Company	N/A	N/A
NJOY	Facebook, Twitter, YouTube, Instagram	Yes
Eonsmoke	Facebook, Twitter, Instagram, YouTube, Pinterest	No
LOGIC	Facebook, Twitter, YouTube	Yes
VMR	Facebook, Twitter, YouTube, Pinterest, Instagram	No
Lorillard	Facebook, Twitter, YouTube, Pinterest, Instagram	Yes
Green Smoke	Facebook, Twitter, YouTube, Pinterest	Yes
Lead by Sales	Facebook, Twitter, YouTube, Pinterest	No

Lorillard's Facebook and Twitter pages use age restrictions so that "only people 18 and above will see the blucigs [page] on Facebook" and that any "likes" from people younger than 18 are automatically deleted. Similarly, NJOY maintains Facebook and Twitter accounts that are restricted to those 18 years of age or older. To follow NJOY on Twitter, a user must verify their age by entering their birthdate, confirming they are above 18 years of age.

LOGIC uses Facebook's age restriction functionality and states that its products "are intended for use by adults of legal smoking age 18 years or older according to state law." Green Smoke also "uses the official Facebook service to restrict those under 18 from viewing [its] content" and gears its "social media messages towards adults [and deletes] fan posts, comment or images that might appeal to minors." Green Smoke also uses YouTube's age-restriction feature to limit viewership to those above 18 years of age.

VMR does not use Facebook's age restriction tools, despite the fact that these tools are available. Their page simply warns followers that they must be 18 years or older to "follow or purchase" its products.⁴⁷ VMR stated that it has a process to monitor and "unfollow users that it believes to be under the age of 18." (see Figure 7).

Figure 7

While Eonsmoke and Lead by Sales maintain social media accounts, these companies do not utilize available age restriction tools.

Eonsmoke, which maintains a Facebook page, only provides a statement that one "MUST BE OVER 18 AND OLDER TO PURCHASE EONSMOKE," but access is not restricted.⁴⁸

Figure 8 demonstrates Eonsmoke's use of social media in order to poll Facebook users regarding what flavor of e-cigarette they would like to see released. Because Eonsmoke does not utilize available age restriction tools, there is nothing to prevent people younger than 18 from viewing or engaging with this kind of content or other similar content.

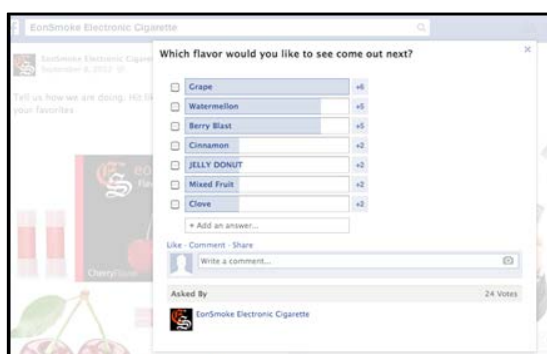

Figure 8

Lead by Sales' White Cloud Facebook page is also unrestricted and contains no statements or warnings about age restrictions. Lead by Sales also offers what it calls the "Fling a Friend Game" (see Figure 9), an animated cartoon game that allows one to earn coupons for e-cigarettes that can only be redeemed through Facebook.

LOGIC wrote that it "has historically used social media to communicate with" its adult consumers but that it is "currently reviewing that practice to ensure" it is not initiating contact with consumers prior to age verification.

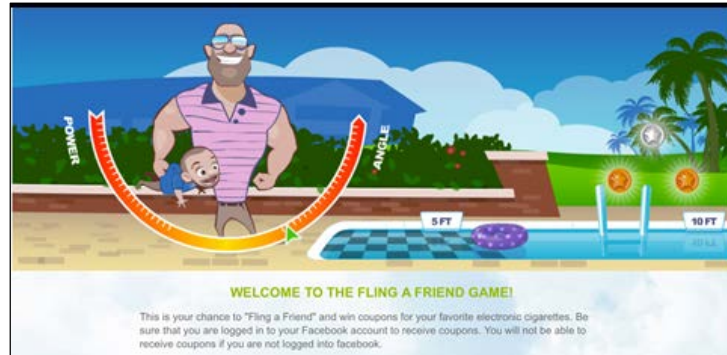

Figure 9

FINDING 7: E-cigarette product warning labels lack uniformity and may confuse or mislead consumers.

Warning labels were first required on cigarettes by the Federal Cigarette Labeling and Advertising Act of 1965, and the Tobacco Control Act expanded FDA’s authority to also prohibit false and misleading labeling and advertising for cigarettes, such as claims that a product reduces harm. For example, in order for a manufacturer to claim a product reduces harm or the risk of a tobacco-related disease, the law requires manufacturers to first file an application with FDA and receive an official determination before claiming a product has a modified risk.⁴⁹

Once FDA issues deeming regulations and without the necessary evidence that e-cigarettes reduce the public’s risks, the agency could prohibit e-cigarette products from making health and harm reduction claims. Although none of the companies reported using harm reduction or health benefits claims to market e-cigarettes, our investigation found that some manufacturers are in fact making such claims. Lead by Sales marketing for White Cloud states, “You get the feeling of smoking real cigarettes without all of their negative side effects.” Their marketing also states that you can “Give the Gift of Fresh Air!” and “eliminate the tar, ash, and unwanted chemicals from your cigarettes”⁵⁰ (see Figure 10).

Unlike traditional cigarettes, federal law does not require that e-cigarette products contain a warning label. With the exception of Lead by Sales, all surveyed companies indicate that a health warning or disclaimer is displayed on e-cigarette packages; however, there is significant variation in the statements on labels (see Appendix 4).

Eonsmoke’s warning is: “SURGEON GENERAL’S WARNING: Quitting Smoking Now Greatly Reduces Serious Risks to Your Health. NOT TO BE SOLD TO MINORS!” Some

warning labels state that “this product does not treat, diagnose, or cure any disease, physical ailment or condition. This product is not marketed for use as a smoking cessation product,” while others do not. Some product labels list detailed health risks associated with nicotine and the risks for pregnant women while others are vague. As it pertains to age, some labels state that their product is only for people of legal age, whereas others warn that the product is not intended for minors.

The current lack of uniformity in e-cigarette warning labels could mislead and confuse consumers and make it difficult for the public to gain a clear understanding of the products’ risks.

Figure 10

FINDING 8: Most surveyed e-cigarette companies support some form of regulation.

Six companies, which account for 75% of respondents – Altria, LOGIC, Lorillard, NJOY, R.J. Reynolds, and VMR – reported that they support some regulation of e-cigarettes.

Altria wrote that FDA should promptly “issue regulations to bring all tobacco products within FDA’s regulatory authority under the Family Smoking Prevention and Tobacco Control Act” and Lorillard wrote that it supports “and [stands] ready to work in partnership with the FDA to develop regulations for electronic cigarettes.” Altria also stated that “both the FDA and all states should enact laws mandating that all tobacco products be merchandised in a non-self-service or clerk-assisted manner.”

NJOY “supports restrictions on the sales and marketing of e-cigarettes to children and teenagers who are not of legal smoking age and is in favor of reasonable regulations that advance this goal.” VMR also wrote of “the need for reasonable regulation” of e-cigarettes. R.J. Reynolds wrote that it “[looks] forward to reviewing the proposed deeming regulation” and that at the state level R.J. Reynolds has promoted and supported “efforts to enact legislation prohibiting minors from purchasing e-cigarettes.”

LOGIC supports “regulation commensurate with harm,” favoring age restrictions for e-cigarettes “in a manner similar to cigarettes” and “support[ing] a ban of the usage of television to market electronic cigarettes.” LOGIC also stated that the company supports a ban of characterizing flavors (with the exception of menthol), a ban on online sales, and regulation of e-cigarettes at the point of sale.

These responses indicate that there is general agreement among manufacturers on the necessity to regulate e-cigarettes to some degree. In the absence of FDA regulations, the marketing and sale of e-cigarettes, use of characterizing flavors, promotional activity, point-of-sale practices, and warning labels are subject to inconsistent state laws or inadequate self-regulation.

Conclusion and Recommendations

This investigation reveals that e-cigarette manufacturers are aggressively promoting their products using techniques and venues that appeal to youth. The company policies covering advertising, promotional events, use of social media, characterizing flavors, warning labels, and point-of-sale procedures vary widely. The result is an inconsistent application of e-cigarette sales policies that fail to protect children and teenagers from e-cigarette marketing and sales.

FDA action is essential to ensure that e-cigarette makers do not target the nation's children and teens.

The Tobacco Control Act gave FDA the statutory authority to regulate e-cigarettes, which would subject them to evaluation and marketing restrictions. In the absence of FDA using its authority to issue e-cigarette regulations, e-cigarette companies are taking advantage of the regulatory vacuum to market their products to youth. In light of concerns regarding exposure to addictive nicotine and other ingredients in e-cigarettes, the sharp rise in e-cigarette use among teens, and the marketing of these products to youth, FDA should act quickly to finalize and issue deeming regulations pertaining to e-cigarettes.

Appendix 4: E-Cigarette Manufacturer Warning Labels

Manufacturer	Warning Labels
Altria	<p>This product is not a smoking cessation product and has not been tested as such. This product is intended for use by persons of legal age or older, and not by children, women who are pregnant or breast feeding, or persons with or at risk of heart disease, high blood pressure, diabetes, or taking medicine for depression or asthma. Nicotine is addictive and habit forming, and it is very toxic by inhalation, in contact with the skin, or of swallowed. Nicotine can increase your heart rate and blood pressure and cause dizziness, nausea, and stomach pain. Inhalation of this product may aggravate existing respiratory conditions. Ingestion of the non-vaporized concentrated ingredients in the cartridges can be poisonous.</p> <p>CA Proposition 65 Warning: This product contains nicotine, a chemical known to the state of California to cause birth defects or other reproductive harm.</p>
R.J. Reynolds Vapor Company	<p>This is a tobacco product. No tobacco product has been shown to be safe and without risks. This tobacco product contains nicotine which is addictive. This product is intended for use only by adult tobacco consumers and is not intended for persons who are pregnant or breast feeding; persons who have an unstable heart condition, high blood pressure, or diabetes; or persons who are at risk for heart disease or are taking medication for depression or asthma. Keep out of reach of children.</p> <p>Vuse reusable warning:</p> <p>VUSE is a tobacco product because the nicotine used in this product is extracted from the tobacco plant. No tobacco product has been shown to be safe and without risks. This tobacco product contains nicotine which is addictive. This product is intended for use only by adult tobacco consumers and is not intended for persons who are pregnant or breast feeding; persons who have an unstable heart condition, high blood pressure, or diabetes; or persons who are at risk for heart disease or are taking medication for depression or asthma. Keep out of reach of children.</p> <p>WARNING: This product contains nicotine, a chemical known to the State of California to cause birth defects or other reproductive harm.</p>
NJOY	<p>Warning: NJOY products are not smoking cessation products and have not been tested as such. The U.S. FDA has not approved NJOY products for any other use and they are not intended to diagnose, cure, mitigate, treat, or prevent any disorder, disease, or physical or mental condition. NJOY products contain nicotine, a chemical known to the state of California to cause birth defects or other reproductive harm. Nicotine is addictive and habit forming and it is very toxic by inhalation, in contact with the skin, or if swallowed. Ingestion of the non-vaporized concentrated ingredients in the cartridges can be poisonous. Physical effects of nicotine may include accelerated heart rate and increased blood pressure. If the cartridge is swallowed, seek medical assistance immediately. NJOY products are intended for use by adults of legal smoking age (18 or older in California), and not be children, women who are pregnant or breastfeeding, or persons with or at risk of heart disease, high blood pressure, diabetes or taking medicine for depression or asthma. NJOY products may not be sold to minors. Identification of all persons under 26 will be required before purchase. Keep out of reach of children.</p>

<p>Eonsmoke</p>	<p>SURGEON GENERAL'S WARNING: Quitting Smoking Now Greatly Reduces Serious Risks to Your Health.</p> <p>18+ Only CALIFORNIA PROPOSITION 65 - Warning: This product contains nicotine, a chemical known to the state of California to cause birth defects or other reproductive harm. Eonsmoke, LLC products are not a smoking cessation product and have not been evaluated by the Food and Drug Administration, nor are they intended to treat, prevent or cure any disease or condition. For their protection, please keep out of reach of children and pets.</p> <p>NOT TO BE SOLD TO MINORS</p> <p>NOT FOR SALE TO MINORS</p>
<p>LOGIC</p>	<p>(Disposables) Warning: This product is an electronic cigarette and should not be used by non-smokers, women who are pregnant or breast feeding, those sensitive to nicotine, or persons with or at risk of heart disease, high blood pressure, diabetes, or taking medicine for depression or asthma. LOGIC products contain nicotine, a highly addictive drug. LOGIC products are not for smoking cessation, and no way claim to assist in lessening the frequency or quitting of smoking tobacco products. They are not intended to be drug products that diagnose, treat, cure or mitigate any disease or condition. THE FDA DOES NOT APPROVE TOBACCO CIGARETTES AND ELECTRIC CIGARETTES AT THIS TIME.</p> <p>KEEP OUT OF THE REACH OF CHILDREN. Choking and ingestion hazard.</p> <p>NO ANIMAL TESTING. 1X USE/RECYCLE</p> <p>CA Proposition 65 Warning: This product contains nicotine, a chemical known to the state of California to cause birth defects or other reproductive harm.</p> <p>(Rechargeables) Warning: This product contains nicotine and should not be used by non-smokers, women who are pregnant or breast feeding, those sensitive to nicotine, or persons with or at risk of heart disease, high blood pressure, diabetes, or taking medicine for asthma or depression. Underage sale prohibited. Keep out of reach of children. This product is not a smoking cessation device and no way claims to assist in lessening the frequency or quitting of smoking tobacco products. They are not intended to be drug products that diagnose, treat, cure or mitigate any disease or condition. This product is not regulated by the U.S. Food and Drug Administration.</p> <p>Logic Products are intended for use by adults of legal smoking age 18 years or older according to each state law. Identification of all persons under 26 will be required before purchase.</p> <p>NO ANIMAL TESTING. 1X USE/RECYCLE</p> <p>CA Proposition 65 Warning: This product contains nicotine, a chemical known to the state of California to cause birth defects or other reproductive harm.</p>

VMR	<p>YOU MUST BE OF LEGAL SMOKING AGE TO BUY AND/OR USE ANY V2 CIGS PRODUCT. This product contains nicotine and is not for use by persons under legal smoking age. Keep out of reach of children and pets. If swallowed, this product can present a choking hazard. Nicotine is addictive and can be toxic if inhaled or ingested and may cause irritation if it comes into contact with your eyes or skin. Wash immediately with soap and water upon contact. Like other products with nicotine, you should not use this product if you are pregnant or breastfeeding, have or are at risk of heart disease, high blood pressure, diabetes, if you are taking medicines for depression or asthma or if you are allergic to nicotine, propylene glycol, or any combination of inhalants. Discontinue use and consult a physician if you experience symptoms of nicotine misuse such as nausea, vomiting, dizziness, diarrhea, weakness or rapid heartbeat. This product does not treat, diagnose or cure any disease, physical ailment or condition. This product is not marketed for use as a smoking cessation product and the statements made herein have not been evaluated by the FDA, or any other health or regulatory authority.</p> <p>"WARNING: This product contains a chemical known to the state of California to cause birth defects or other reproductive harm."</p> <p>"Keep out of reach of children. Underage sale prohibited."</p>
Lorillard	<p>NOT FOR SALE TO MINORS</p> <p>blu eCigs[®] electronic cigarettes are not a smoking cessation product and have not been evaluated by the Food and Drug Administration, nor are they intended to treat, prevent or cure any disease or co-condition.</p> <p>For their protection, please keep out of reach of children and pets.</p> <p>CA Proposition 65 Warning: This product contains nicotine, a chemical known to the state of California to cause birth defects or other reproductive harm.</p>
Green Smoke	<p>Nicotine is highly addictive. Use only if above legal age. Do not use this product to treat any medical condition or habit. Consult a doctor prior to use if pregnant, breast-feeding or suffer from any medical condition. Stop use if you show any sensitivity to this product. This product contains nicotine, a chemical known to the State of California to cause birth defects or other reproductive harm.</p>

²¹Family Smoking Prevention and Tobacco Control Act, Pub. L. No. 111-31.

²²The Tobacco Control Act expanded FDA’s authority to regulate tobacco products, such as e-cigarettes, cigars, and pipe tobacco. The Act defines the term “tobacco product,” in part, as any product “made or derived from tobacco” that is not a “drug,” “device,” or combination product under the Food, Drug, and Cosmetic Act. Before FDA can regulate these tobacco products, the agency must issue deeming regulations that have to complete the rulemaking process. On December 31, 2013, FDA submitted to the White House Office of Management and Budget (OMB) a set of proposed deeming regulations. OMB has yet to complete the review of the deeming regulations.

²³Food and Drug Administration, *Regulation of E-Cigarettes and Other Tobacco Products* (Apr. 25, 2011) (online at www.fda.gov/newsevents/publichealthfocus/ucm252360.htm).

²⁴While outside the scope of this report, considerable evidence also exists that e-cigarette cartridge manufacturers are also engaging in the marketing of their products to youth audiences.

²⁵An example of the letters sent to the companies can be found here: www.durbin.senate.gov/public/index.cfm/pressreleases?ID=fafe1d70-0a2c-429c-9372-c5ca201cb261.

²⁶Altria declined to provide information relating to marketing expenditures and sampling events; Green Smoke declined to provide information relating to marketing expenditures.

²⁷In the instance where the company did not respond to questions, supplemental information was gathered from company websites or through reviewing other publically available information, including social media sites and product labels.

²⁸Family Smoking Prevention and Tobacco Control Act, Pub. L. No. 111-31.

²⁹A 1997 study by the Cancer Research Campaign found that tobacco sponsorship of Formula One motor racing events was associated with boys who were racing fans being almost twice as likely to become regular smokers compared to boys who were not motor racing fans. Charlton, A, While, D, Kelly, S., *Boys' smoking and cigarette-brand-sponsored motor racing*. CRC Education and Child Studies Research Group, School of Epidemiology and Health Sciences, University of Manchester. 1997.

³⁰Family Smoking Prevention and Tobacco Control Act, Pub. L. No. 111-31.

³¹Research shows that attending promotional events where free cigarette samples are dispensed is associated with becoming a smoker. See, e.g. Rigott, N, Moran, S, and Wechsler, H, "U.S. College Students Exposure to Tobacco Promotions: Prevalence and Association with Tobacco Use," *American Journal of Public Health*, 94(12); 1-7, 2004.

³²The number of sponsored events and cases of distributing samples is based on self-reporting from six surveyed companies. During the investigation, unreported events were identified that are not included in this report. Altria has held sampling events but declined to provide an itemized list; R.J. Reynolds provided a list of all locations

where sampling events were held through October 31, 2013. The total number of events in 2012 and 2013 is based on the conservative assumption that one event was held at each of the R.J. Reynolds' sampling locations.

³⁶White Cloud Cigarettes, *White Cloud Announces Operation Comedy Ha Ha* (March 8, 2014) (online at www.whitecloudelectroniccigarettes.com/blog/white-cloud-announces-operation-comedy-ha-ha/).

³⁷Numerous studies have demonstrated an association between flavored tobacco products and increased likelihood of use by youth. See American Legacy Foundation, *First Look Report 17: Cigarette Preferences Among Youth--Results from the 2006 Legacy Media Tracking Online (LMT0)*, (June 5, 2007) (online at americanlegacy.org/PDFPublications/fl_17.pdf).

³⁸One company, LOGIC, reported that as of 2013 the company ceased to manufacture non-menthol flavored e-cigarettes.

³⁹Menthol cigarettes are much more likely to be used by youth and young adult smokers than older smokers and are undermining efforts to reduce smoking in the United States. Menthol cigarettes increase overall youth smoking by increasing the number of children who experiment with cigarettes and the number of children who become regular smokers. Giovino, et al., "Differential trends in cigarette smoking the USA: is menthol slowing progress?" *Tobacco Control* (051159) August 30, 2013.; Tobacco-Free Kids, *FDA Advisory Committee Concludes Removal of Menthol Cigarettes Would Benefit Public Health*, (March 18, 2011) (online at https://www.tobaccofreekids.org/press_releases/post/fda_advisory_committee_concludes_removal_of_menthol_cigarettes_would_benefit).

⁴⁰Other surveyed companies may also use a third-party verification system to confirm the purchasers' age, but only Lorillard, NJOY, LOGIC, and VMR disclosed use of one for online purchases.

⁴¹Department of Health and Human Services, *The Health Consequences of Smoking – 50 Years of Progress: A Report of the Surgeon General* (Jan. 2014) (online at www.surgeongeneral.gov/library/reports/50-years-of-progress/full-report.pdf), 827.
