Testimonials:

Melissa B: " In July of 2008 I crossed paths with a dog who was a stray on the Indian Reservation near Casa Grande, AZ. She was extremely malnourished, looked very ill, and had no use of her front right leg. On 12-18-08 I drove to Casa Grande to pick her up. I was in agreement with my veterinarian that we would amputate her front right leg, let her recover and find her a home.

When I pulled up, she was curled up on a little rug that was wet and muddy and embedded into the ground. She looked more emaciated than she did in July, you could see every bone in her body and her front right leg was half the size of her left. She was covered in ticks, had 3 open sores on her front right paw, and an open wound the size of a quarter on each hip.

When I got her to my vet, she took one look and said she would never survive anesthesia to have her leg amputated. We debated euthanasia as we thought that would be the most humane action due to the severity of her condition and the long, expensive journey to recovery it would be.

I asked if we could try treatment to see what happens and my vet agreed. We did blood work and x-rays and the results were devastating. She had valley fever at the highest level it could reach, tick fever, heartworm, and protein loss through her urine. X-rays showed 3 vertebrae in her spine that were completely eaten away from the valley fever, and the bones in her front right paw were also badly eaten away from the valley fever.

She would frequently experience nose bleeds and weighed in at only 27 pounds. Even after all of the heart breaking results, I was not about to give up hope. In March of 2009 I started giving her the Mangosteen and Minerals product with the approval of 5 vets.

By now this sweet little fighter stole my heart and scored herself a home with me. Her name is Princess and she is every single bit of that name and then some! One short year later her heartworm is gone, her bones are all significantly improved, her valley fever and tick fever are almost gone, she is no longer losing protein through her urine or having nose bleeds, she weighs 45 pounds and still has all four legs!

I truly believe in my heart that the Mangosteen and Minerals product is what saved Princess's life, without it she would not be where she is at today."
