

# World's Best Aloe Gel

with Emu Oil and MSM

99% of all aloe products available today are *not* stabilized

## Promotes healthy, younger looking skin!

- Massage on pregnant abdomen for amazing results
- Use before and after sun tanning for better results
- Helps control foot and underarm odor
- Helps relieve insect bites and other skin problems
- Cuts and scratches love the feel of our healing gel
- Makes a great personal lubricant!

*Softer, clearer skin, less visible wrinkles!*

8 oz  
(236 ml)

**Natural NutraGel helps prevent and heal inflammation due to sun exposure**

*Not a sunblock, so you get all the healthy benefits of the sun with none of the damage!*

**Now children and fair-skinned people can safely avoid burning!**

If it doesn't say "stabilized" on the label, it has **no** acemannan, the active ingredient in aloe!

**NutraGel** allows you to enjoy the sun longer without damaging your skin.

(Apply before and after)

**Helps relieve joint and muscle pain!**

### *"Stabilized" Aloe is the Difference*

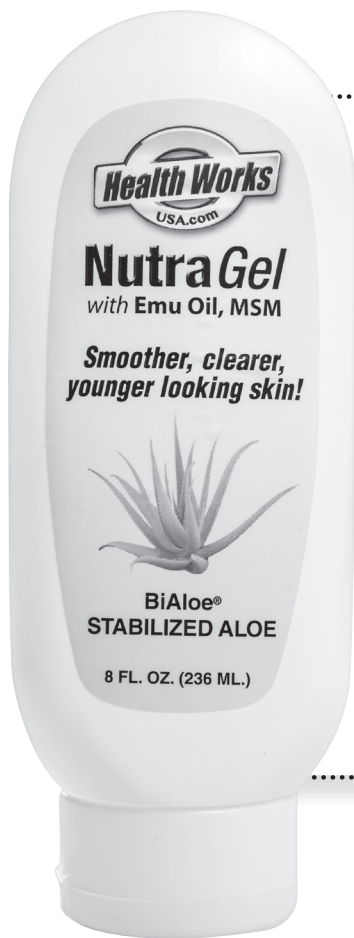

When the leaf is cut, the plant releases an enzyme that destroys the healing factors in aloe. We stabilize the aloe by removing the destructive enzyme.

We concentrate the stabilized aloe, then add penetrating emu oil and MSM for the world's best skin care – *at any price!*

Childhood injury visibly improved after only 5 months of applying the gel twice daily.

## HealthWorksUSA NUTRA GEL

- Stabilized aloe concentrate
- Emu oil for absorption
- OptiMSM®—"The Miracle Mineral"
- ionic Silver Water for increased healing

**These 4 natural ingredients are blended into a smooth, creamy gel for the best skin treatment money can buy!**

### OptiMSM®

MSM (methylsulfonylmethane) is naturally occurring sulfur. Often called the "Miracle Mineral" because it's good for so many conditions. When applied topically, it softens the skin for less visible wrinkles. MSM is great for sun damage, blemishes and other age-related skin conditions.

### Emu Oil

Emu Oil is a transdermal oil that carries the healing aloe and MSM deep into your skin. As an animal based oil (not plant based), it more closely resembles your own natural skin, making it the ideal moisturizer.

*It's very expensive and this is why you seldom see it in cosmetics or lotions, yet we put an ounce in every tube!*

***Takes the sting out of bug bites!***

Caution: gel will sting if applied to an open wound.

**99% of all aloe products available today are *not* stabilized**

**Historical** Ancient people learned by trial and error that only the gel from fresh aloe worked. After a few days, the gel was not nearly as effective.

**1950's** After seeing the horrible radiation burns caused by atomic bombs, American scientists began testing various substances to heal these wounds. They found that fresh aloe worked very well, but it had to be fresh as gel kept in storage did not work. Since there was no way to keep it fresh, the discovery was forgotten.

**Today** A company in Texas discovered that Acemannan (glyconutrients) were the healing ingredients in aloe. They perfected a process to stabilize it by removing an enzyme that is released when the plant is harvested.

**1 Liter Pump Top = 4 - 8oz tubes.**

### BiAloe® by Lorand Laboratories

Dr. Santiago Rodriguez was on the original team of scientists that first developed stabilized aloe some years ago. He has gone on to perfect the process which gives BiAloe® twice as much acemannan as the nearest stabilized aloe.

### Beware of Imitators

Some aloe producers are adding a very small amount of stabilized aloe to their regular aloe in an attempt to fool you. If their original aloe was any good in the first place, why do they have to add stabilized aloe powder to it?
