Whether you're an experienced smoker or new to the nicotine scene, using e-cigarettes or other vaping devices are a perfect way to attain that nicotine rush you crave without all the associated chemicals in traditional cigarettes. There are many reasons why people choose these over a cigarette. Take a look at some of the top reasons people enjoy vaping as opposed to smoking. Some of the reasons may surprise you, making e-cigs an attractive alternative.

**#5: No Widespread Vaping Laws**

It's nearly impossible to find a designated smoking area when you're in a rush. One of the main reasons why people use an e-cig is the freedom to vape. Because you exhale vapor, rather than smoke, **you are technically free to vape almost anywhere**. If that nicotine craving strikes you, there's no concern about searching for a smoking area. You simply look for an open area that allows the vapor to dissipate quickly to be courteous to others.

**#4: Controlling Nicotine Intake**

Traditional cigarettes only offer a fixed nicotine amount that may vary between manufacturers. One of the other reasons why people choose an e-cig is the controlled nicotine level. With concentrations varying from 0mg to 24mg, you have the power to have as much or as little nicotine as you like. **If you're using e-cigs to quit smoking, you use the nicotine levels as a way to wean yourself off.** Or you may just want a smaller nicotine amount for personal reasons. E-cigs give you freedom of selection unlike fixed nicotine amounts in traditional cigarettes.

**#3: Environmentally Friendly**

One of the major reasons why people select an e-cig is for environmental concerns. Cigarette butts are found almost everywhere, contributing to landfill volumes and environmental harm. E-cigs are either disposable or reusable. Even if you select a disposable model, you can always recycle the internal battery to reduce waste. Reusable models lower environmental damage by reducing litter, along with saving you money. You simply need to buy the e-juice rather than buying a whole pack of traditional cigarettes that can add up in price.

**#2: Safer for Loved Ones**

You may have a spouse or children at home that are bothered by traditional cigarette smoke. One of the other reasons why

an e-cig is a smart choice is the exhaled vapor. When a smoker exhales, smoke full of chemicals and harmful substances fills a room. When you vape, you inhale the nicotine and exhale the water vapor. It evaporates in an instant, leaving no residual toxins in the air. You can vape at home without concern about second-hand smoke.

#1: The Flavors

Although some traditional cigarettes have added flavoring, nothing compares to the flavor selections in e-liquid. From cookie dough to tropical fruits, you can conceivably have a new flavor every day to make vaping a unique pleasure. People who abhor smoking, but enjoy the nicotine rush, often choose e-cigs as a way to enjoy a flavorful taste, along with controlled nicotine intake.

It might seem that electronic cigarettes or “vaping” have only recently infiltrated our culture. It seems that after decades of battling cigarette addiction and illness, America has collectively stumbled upon a less toxic alternative. However, the idea of e-cigs has been around since the 1960’s. Below we’ll discuss the fascinating evolution of the electronic cigarette and the increasingly popular pastime of vaping.

**The E-Cig’s Humble Beginnings:** In 1963, Herbert A. Gilbert introduced the first electronic cigarette to the market. He wanted a healthier option to regular cigarettes, so his invention used moist flavored air in place of tobacco. No vapor was produced, but Gilbert did advertise his e-cig as a great way to inhale asthma medicine. Unfortunately the odds were not in Gilbert’s favor to get his product off the ground. We simply did not have the technology back then to mass produce the e-cig.

Additionally, American culture had not yet embraced the bad news about cigarettes and many believed them to be harmless. Fast forward to 2007, when Hon Lik’s invention of the modern e-cig went international. L k’s e-cig contains a nicotine liquid solution in vapor form as air is inhaled and activates an atomizer. With each drag, a light shines at the front of the device. It does not contain tar and other cancer causing chemicals found in traditional cigarettes.

**The Vaping Craze :** Hon L k’s well-conceived electronic cigarette model quickly gained popularity across the world, namely in the U.S. Many tobacco smokers were happy to put down their toxic cigarettes and pick up the more pleasant vapor-producing e-cigs. Before long, various types of e-cigs hit the market, giving those who vape a greater variety. For example, some e-cigs are considered “cig-alikes” and mimic both the size and shape of regular cigarettes.

Mid-size models are growing in popularity; they are rechargeable and reusable and come in a variety of colors and shapes. E-cigs are more pleasantly fragrant than pungent cigarettes. A large number of places all across the country allow vaping indoors, whereas cigarette smoking indoors is practically banned everywhere.

**The State of E-Cigs Today:** According to **ABC News**, vaping is significantly less expensive than smoking cigarettes. For an e-cig starter kit, you will look to pay \$30 - \$100. A replacement cartridge can run \$600, but consider the \$1000 a year it costs to maintain a cigarette habit. 4 million Americans are choosing vaping over smoking, and that number

is steadily on the rise. There are currently 250 brands of electronic cigarettes on the market. You can by the liquid solution in almost any flavor you can imagine, from strawberry to watermelon or java. Research on vaping continues, as its popularity rises.

For those addicted to cigarettes, an e-cig could be a welcome alternative regarding both your health and finances.

The switch to vaping units are slowly taking place as more smokers realize the benefits of this form of smoking when compared to traditional cigarettes. One of the major problems many smokers of vaporizers see is the fact that their unit can often run out of power when they're away from home and in need of recharging the unit to make sure it continues to run correctly. Many people are now looking to enjoy the nicotine e-liquid of this device at all times, which means accessories, such as wall chargers, car chargers and USB adapters are becoming more popular.

Purchasing extra charging units can be a good option for those looking to make the switch to vaping. Driving and time at work can often lead to a vaporizer losing its charge over a prolonged period of time, in turn this can also lead to a smoker returning to a tobacco cigarette when they feel the need to light one. Returning to a traditional cigarette isn't a good idea as the number of toxins and chemicals in each cigarette is high and adds the distinctive antisocial smell of a cigarette to the clothing and car of the smoker.

Driving is one of the major areas of life that's often described as being a time when the individual is in need of a cigarette. Boredom and time spent in heavy traffic can lead to the need to light up, only to find the vaporizing unit is out of power. A good idea's to purchase a car charger that can be found here at Starfire Cigs. A car charger can make sure the vaporizing unit is always available and the need to return to traditional cigarettes is not given into.

Extra wall charging units that can be placed at work or carried in a bag or car are always good options to make sure the vaporizing unit is always charged and available when the need for nicotine is always available. Replacement and extra wall chargers can be purchased for a low price on our site. They often allow a smoker to be sure they have the chance to recharge their unit no matter where in the world they are.

USB chargers are a further option that can be explored for those who want a truly portable charging option for their vaporizing unit. USB chargers can be plugged into a computer or mobile device, which allows a vaporizing unit to be charged on the move or any other location. This means no smoker should have the problem of a vaporizing unit having no power when it is needed.

In recent years, electronic cigarettes have increasingly become popular. Different people within different age groups have shifted to the use of electronic cigarettes, away from the consumption of actual tobacco products. The increased usage of electronic cigarettes is associated with a number of factors, among them health, tobacco smell, and the convenience of smoking. These factors coupled with changing consumer tastes and preferences and dynamic consumer markets constitute a high demand for electronic cigarettes across the globe.

Health is undoubtedly a critical factor to the life of every individual. Experts in the health sector associate tobacco consumption with rising cases of lung cancer among other health issues. As a result, cigarette smokers are becoming cautious to the health risks they face when they smoke. Even though electronic cigarettes have not been proven to be 100% safe, lung cancer and issues such as cardiovascular complications are less common among electronic cigarette users. Moreover, electronic cigarettes do not produce smoke because combustion does not take place. Instead, the final product is vapor, which is not harmful to the user or the people around the user. These observations make electronic cigarettes much safer and healthy to use compared to combustible tobacco cigarettes.

Burning cigarettes produce smoke whose smell is unpleasant to most people. On the same note, mouth odor after smoking is not comfortable especially when interacting or conversing with nonsmokers. As a result, people deem electronic cigarettes as a remedy to this problem. The vapor produced by electronic cigarettes is odorless. At the same time, electronic cigarettes do not leave a bad odor in the mouth due to lack of combustible tobacco in the cigarettes. While electronic cigarettes bring just about the same sensation as other cigarettes, they solve the after-smoking odor drawback.

As earlier mentioned, electronic cigarettes do not produce any smoke. This makes their use highly convenient. The use of electronic cigarettes is not restricted to smoking zones only. These cigarettes can be used almost everywhere at any time. Given that electronic cigarettes offer just about the same sensation as other cigarettes, it becomes convenient for people to use them whenever they want. Most importantly, electronic cigarettes are pocket friendly. Once the initial lump sum purchase amount is paid, the user conveniently replaces cartridges at own convenience. Doing so is undoubtedly cheaper than purchasing a pack of cigarettes from time to time. Moreover, electronic cigarettes are designed to limit effects of smoking transferred to nonsmokers by smokers. In other words, electronic cigarettes are not only convenient to the users, but also to nonsmokers. This makes them a good choice globally.

Smokers everywhere often find themselves in places and situations where lighting a cigarette up is prohibited. Even when smoking's allowed, lighting up a cigarette or cigar may be socially unacceptable. In these situations, an electronic cigarette can be a lifesaver for smokers.

Smoking isn't allowed in places such as grocery stores, restaurants, parks, hospitals, banks, and most any retail location consumers frequently go to. With smoking banned at such a high number of places, many smokers are inconvenienced and unhappy.

Electronic cigarettes are the new cigarettes for smokers. **They're healthier than tobacco based cigarettes, not to mention less expensive when compared to the price per pack. The best benefit by far is being able to smoke anywhere at any time.** Take the movies for example, after enjoying your refreshments and sitting in the same seat for about an hour, you may want to smoke but don't want to get up and miss an important part. You can take a few puffs off your electronic cigarette and chances are no one will even probably notice you did.

Another situation most every smoker has found themselves in is riding in the car with children or other non- smokers on a long ride. The e-cigarettes comes in super handy for this situation. Most smokers have the tendency to get edgy and irritable when not able to smoke. When using an e-cigarettes, you can avoid the uncomfortable feeling of smoking around non-smokers.

Work can be stressful and many people suffer from anxiety that escalates on their job. For these employees, smoking helps calm their nerves; e-cigarettes make smoking possible just about anywhere. Electronic cigarettes have no aroma and as an added benefit you won't smell like a pack of cigarettes wherever you go. Not to mention when used correctly the electronic cigarettes do much less damage to your health than regular cigarettes.

The most important reason to be able to smoke anywhere anytime, is your freedom of choice and peace of mind. In a world where our freedoms like the right to bear arms, to protest, to speak freely are being infringed upon, smoking is just another freedom they want to take away from us.

Using an this device will not only give you back your freedom to smoke where you want, when you want. They will allow you to do so without having to worry about making a scene in public. Don't do it for others though, do it for yourself, because there's no sense in smoking at all if you can't enjoy it.

E-cigs are a contentious subject to say the least. Michael Siegel, professor in the Department of Community Health Sciences at the Boston University School of Public Health, recently published an op-ed that acknowledges the issues, but that highly values the benefits gained by e-cigarettes. Unlike most articles that skirt the issue, the recent *New York Times* opinion piece by Professor Siegel **actually claims that electronic cigarettes are scientifically proven to be an effective smoking cessation method.**

This is a rather large claim.

**Michael Siegel, unlike many making such claims, backs his claims up with studies. This clinical survey, linked to by the "What's not to Like" article, details the statistics of smokers who were able to lessen their dependence or quite all together after switching to e-cigs. This article is truly an interesting take on the e-cigarette revolution.**

**Want to check it out for yourself? Here is the link to the *New York Times* article:**
