### Answers

#### Are electronic cigarettes and cigars banned by the FDA?

No. Electronic Cigarettes and Cigars are legal in all 50 states and the District of Columbia as well as most countries internationally! For a synopsis of Electronic Cigarette related legal information internationally, please refer to the [Wikipedia entry on Electronic Cigarettes](#).

#### Can I Save Money Using Seminole Unconquered?

**Absolutely! Most of the money spent on cigarettes today goes towards taxes and they can**

The guide below will help you select the right nicotine level for yourself.

24 mg = Comparable to "non filters" (Designed for the very heavy smoker.)

18 mg = Comparable to "full flavored"

14 mg = Comparable to "mediums"

### How does an Electronic Cigarette work?

The refill cartridge has a heating coil inside that vaporizes the flavoring fluid that contains nicotine. When you take a drag on an electronic cigarette, the flow sensor automatically turns the coil on, heats the vaporizing fluid in the cartridge and generates vapor. The fluid is vaporized into a fine mist that looks identical to smoke, except there's "No Smoke, No Tar, No Ash and No Bad Smell"

### How Long Does a Disposable Electronic Cigarette or Cigar Last?

Each cigarette will last about 120 puffs. 180 is roughly equivalent to 1 pack of cigarettes.

Our electronic cigars will last about 800-1000 puffs, or about 8-10 cigars. We have noticed in the last 4 years that customers tend to use electronic cigarettes more frequently compared to their traditional cigarettes due to the increase in convenience. It is always wise to stock up on refills and plan ahead to make sure you do not run out. The last thing we want is for you to start smoking real cigarettes again. Please make sure that the refill cartridges are stored in a dry environment, out of direct sunlight and not in any hot, enclosed areas like a car. The average shelf life for an electronic cigarette is about 3 months unopened. Opened cigarettes should not be used after one week.

### Is propylene glycol safe to inhale?

Propylene Glycol has been used in asthma inhalers since the 1950's. It is a natural germicide and is the mixing compound of choice for most pharmaceutical and vitamin mixtures. If you take any kind of a commercial pill or have used an inhaler you have ingested propylene glycol. It is also the "smoke" you have seen in live theater and at concerts

### Is the vapor dangerous for people around me like second hand smoke?

No. There is no second hand danger from Seminole Unconquered Electronic Cigarettes and Cigar products because there is no burning of any kind.

### Isn't propylene glycol the same stuff that's in my car's anti-freeze?

No, anti-freeze contains ethylene glycol, which IS a poison. Propylene glycol USP is a food and pharmaceutical product and it is non-toxic.

### It says on my Seminole box "this product is not FDA approved". What does that mean?

Seminole Unconquered makes no claims about the effectiveness of electronic cigarettes in helping anyone quit smoking tobacco cigarettes or in treating any disease. Your products contain nicotine and you should be aware of the risks involved in using nicotine products.

### I'm using my Seminole Electronic Cigarettes more than my old cigarettes. Isn't that bad for me?

No. Using a electronic cigarette is different. A regular cigarette must burn out, so you smoke a whole one. With Seminole Unconquered electronic cigarettes and cigars, you may feel like you are smoking more, but you actually aren't because you're puffing over a more extended time period.

### The taste is slightly sweeter than a traditional cigarette. Why is this?

Unlike smoke from a traditional cigarette, vapor has no bitterness because nothing is burning. No burning = No bitterness.

### What ingredients are in an electronic cigarette or cigar?

Electronic Cigarettes and cigars have just four basic ingredients:

Vaporizing fluid (Propylene Glycol)  
Distilled water  
Natural flavors and essential oils  
Nicotine

All ingredients are approved for human consumption.

### What is an Electronic Cigarette?

Electronic Cigarettes are a new technology that offers a real alternative to smoking dangerous tobacco cigarettes. It is a smarter alternative to smoking because there is no tobacco combustion. Seminole Brand has no smoke, no tar, no ash and no bad smell. Yes, Electronic Cigarettes and Cigars have nicotine to satisfy the craving for a cigarette however it does not have the health dangers related to inhaling highly toxic cigarette smoke.

### What is propylene glycol? (PG)

“PG” is primarily a food additive used in thousands of products. It is a glycerin product that is refined for human consumption. PG is a natural germicide, easily biodegradable and is a preferred mixing compound for most pharmaceutical and vitamin pills. PG and water mix very well which is why it makes such great vapor.

### What is that smoke coming from my Seminole Unconquered Electronic Cigarette?

Our electronic cigarettes have no flame, does not burn and makes no smoke. What you are seeing is a fine water vapor mist produced in a similar process to most FDA approved inhalers.

Cigarettes, on the other hand, have 4000 identified cancer causing chemicals in them when they burn (tar, benzene, formaldehyde and worst of all carbon monoxide) creating smoke. Some of the fumes that come out of your car are found in tobacco cigarettes.
