## Study accidentally exposes chemotherapy as fraud - tumors grow faster after chemo!

A team of researchers from Washington state had a giant "Oops!" moment recently when it accidentally uncovered the deadly truth about chemotherapy while investigating why prostate cancer cells are so difficult to eradicate using conventional treatment methods. As it turns out, chemotherapy does not actually treat or cure cancer at all, according to the study's findings, but rather fuels the growth and spread of cancer cells, making them much harder to stamp out once chemotherapy has already been initiated.

Chemotherapy accelerates the growth of cancer tumors.

**FACIAL CANCER**  
A friend of mine, one of our Team Leaders was suffering from skin cancer which spread all over her face. Dr had advised her not to go through chemotherapy as it may cause blindness to her eyes. Fortunately, she was introduced to RESERVE and photo shows tremendous improvement on her after few months of consuming RESERVE. A Review Photo Message Shared by Our Jeunesse
