jeunessereservesg Lupus is an autoimmune disorder that affects about 1.5million Americans and 5million people worldwide. Lupus causes the body's immune system to attack its own organs such as skin, kidneys, brain, tissues and joints.

Madam Goh is a SLE (Lupus) patient for 30years. She knew her body was degrading but when it affected her face, she was worried that it will disfigure her. Within just one month of consuming Reserve, she noticed the SLE was controlled. The tissue damage did not continue. The picture shows the improvement of the gap in her flesh after consuming Reserve for a year.
