Ingredients

What is the active ingredient in Lipozene®?

The active ingredient in Lipozene® is a proprietary blend of highly viscous glucomannan fiber sourced from the Amorphophallus Konjac root plant. Glucomannan absorbs water and will expand in your stomach giving you a feeling of fullness. And when you are full and satisfied, you will eat less! Effortless!

Benefits of the Konjac

- Aids in weight loss
- Helps control glucose levels
- Helps maintain good cholesterol
- Can help relieve constipation

What Exactly is Glucomannan?:.

Glucomannan is a water soluble fiber that is extracted from the konjac root plant. Glucomannan is grown in Southeast Asia where it has been used for over 1,500 years as a healthy food source. Glucomannan is used to make traditional foods like shirataki noodles, tofu and jelly. It can also be made into a supplement, and can be added to food products as an emulsifier, softener and thickener. Glucomannan is one of the most viscous dietary fibers known to man, and has the amazing ability to absorb significant amounts of water and form a gel.

Glucomannan is believed to assist in weight loss by causing a feeling of fullness and therefore reducing the amount of calories consumed during meals and snacks.

Glucomannan is also thought to act by delaying stomach emptying and also reducing the absorption of fat and protein. Glucomannan is also prebiotic because our friendly gut bacteria feed on it in our intestines. It is believed that there may be a relationship between gut bacteria and weight loss.
