ASTHMA

1. "I have a 9 year-old son who suffers with asthma and allergies and he's been on treatment for up to right at five years. About two months ago, he started having horrible asthma attacks, seemingly for no reason at all. He had a lot of problems with his allergies again, even though he was five years into the treatment and they are supposed to be working their way away. The pediatrician and the allergist really couldn't figure out how to stop this flare up in particular. They decided that maybe he had an infection so they put him on an antibiotic. They changed all his allergy treatment as well as his asthma medication. My child was on six drugs as well as shots, but he wasn't really getting any better. They didn't know what to do, so they changed his antibiotic a second time and did a series of x-rays. He looked like he felt horrible and I know he did. We were on day five of the second drug and he still felt rotten. A friend had been using transfer factor, and she told me about it. I started him out on three a day. After two days, I heard a difference in the coughing. It wasn't as deep and didn't sound as bark-like. It wasn't echoing as deep in his chest. He was still coughing some, but it definitely helped. This got me excited since nothing else had helped so far. I doubled it up, and I started giving him six a day. I did that for a full week. I've tried to bump it up a little more, working it up to nine a day. Also, for his allergies he gets the shots once a month. Normally at the beginning of the month he has this pinky circle under his eyes. By the time he's due for a shot, they're almost black. They have a real deep purplish color. Well unfortunately, we missed this month's shot so he's actually past due. On the transfer factors he's not having the allergy problems that he was. His eyes have remained exactly as they were in the beginning of the month, just barely blushed and pinky. So we're really excited. I love the product and it has made a huge difference. My child sounds human again. It's not embarrassing to him to be out around the public. All the pollutants and the smoke and the perfume aren't choking him up and making him feel horrible." Joanie L.

2. "No other product has been able to convince me like what TF has done. I'm so convinced that I want to help others achieve a quality of life they have not achieved before. It is truly a gift from God and the best gift of healing the Lord has passed onto me. On a personal note, the product has eliminated my wheezing and asthma which I got about 2 and a half years ago due to construction that was going on next to my condo. It has been a struggle since to breath right. It got so bad early during the attack that my heart was deprived of oxygen and had to go to the cardiologist for tests as my ECG had a double bottom. IN fact when I had my asthma attack my Doctor gave me a month off work. Such was the severity of my lung congestion that the Doctor said that it could turn into pneumonia. Once in a while till before I took TF I'd get a bad attack and go to get a nebulizer inhaler as the steroid inhaler would fail. Since TF I've stopped wheezing at night, stopped

my medications, stopped snoring and am free of drugs that help me to breathe right when I sleep. Thanks TF." Christopher Lee

3. "I just wanted to let folks know that when I first heard about the product I was quite intrigued. We're real believers in supplementation and taking responsibility for our own health, and we got the family on it, and what I first noticed in about nine days on the product my son, who has asthma, came off his inhalers. We didn't want to mess around with that so we got him back to the allergist, and his lung function had gone up to the low normal range. I had him in for his 15 year-old checkup and in fact he is back in the high normal range. My daughter who was eight at the time with severe allergies, in three days all symptoms cleared up. And my wife, who has a history of sinus infections, during her last sinus infection back before Labor Day got on transfer factors and in 24 hours knocked it out of her system. When I saw that I realized that we were really sitting on top of a gold mine and really had a reason and a real desire to get out there and tell the story." Kevin O'Conner

4. "I see tremendous, results in my personal life. Quite particularly, I have a little boy who is eight years old. He is an asthmatic, and just recently had an asthmatic attack, it was lasting for awhile, and when you have that much mucus there is a tendency of overgrowth of bacteria and doctors right away, of course, call in the antibiotic. I chose to use transfer factors. There were tremendous and rather astoundingly quick results in the matter of a few days where I could see that he was very well clearing up. When bacteria is present with an asthmatic there is some nasty color to the mucous. That was just beginning to clear up and I was overjoyed. This is something that is cutting edge, extremely exciting, and something that I would even love to thank God for. So that was one of my personal experiences with my son and something very close to my heart." June F.

5. "Casey is 30 years old. He's been asthmatic since birth. He's been using inhalers and this spring it was just really aggravating him and he had a lot of problems. He had a new job that he was working outside on a tractor, working on a vineyard in California. He went on the transfer factors and the Choice 50 also. He's doing very well and he's off all his inhalers and all his medication for the first time in his life. We're just excited about what we've seen happen. I just thank you for the opportunity to share this and thank you for all your work with our company." Judy C.

6. "I was diagnosed with asthma awhile back and experience a lot of shortness of breath, especially when bending over. I couldn't garden which is something I love to do because pulling weeds was just excruciating and I just couldn't get my breath. I have arthritis in my knees so I can't kneel down, so I have to bend over from the middle. After just a few days on the transfer factors I noticed I could breathe better, and had more energy. I can bend over without gasping for air, I haven't really needed to use my inhaler, and I can do my gardening again. I am also using the Fibro AMJ Daytime for my arthritis in my knees and that's helping." Judy R.

7. "My daughter has asthma and my daughter's asthma is not like what you see on TV where they wheeze. Her asthma is where she coughs constantly at night gagging for breath, and once her asthma kicks in it takes me around 2-3 weeks to get rid of it. She had an asthma attack come on; she'd never used transfer factors, but she was breast fed so I wasn't afraid that she would have any problem with this product, and within two days her asthma was gone. I also had one experience where I started to get a bladder infection, and prior to that I always, always, always had to go to the doctor for antibiotics. I immediately tried the transfer factors. I never ended up going to the doctor because my bladder infection was gone. I just think the product is wonderful and anybody who has multiple sclerosis or asthma I strongly recommend they try the product, just try it, it's not going to hurt you, just try it. I'll tell you, I would spend twice as much for this product for the way that it makes me feel. My quality of life has improved a lot." Wendy B.

8. "With terrible asthma since age 7, I began transfer factors 2-1/2 weeks ago and I've gone from 20 medications & inhalers to one pill and one inhaler." Darlene J.

9. "My daughter suffered from serious sinus problems and asthma. Having provided the genes for her condition (I too am asthmatic) I have felts pangs of guilt knowing that all my training could not stop the

common cold virus from rendering Leena helplessly gasping for air a few hours after each infection. Her mother (a pediatric nurse) and I tried every prescription and alternative therapy known, without success. Helplessly we would stand by the bedside offering repeated breathing therapy with slow if any progress. In the local Children's hospital we agonized, like any parents, over each breath our little girl took. In our home viruses can mean colds and "colds always mean asthma!" With the onset of one particularly virulent head cold, we tried transfer factors, a product I felt, theoretically, might work. After several doses we couldn't believe how quickly our daughter's condition improved. Now taking transfer factors before a bad cold, she remains well. Thanks to transfer factors we regained a normal child. Now we all use transfer factors regularly and are enjoying the best health we have ever had." Ranya L. Alexander, Ph.D., M.D.

10. "My husband and my son-in-law have asthma. Since starting on transfer factors, they are both feeling much better." Gaye L.

11. "I had asthma and extreme allergies; I was allergic to almost everything - you name it I was allergic to it. About a year ago my friend introduce me to transfer factors, and I took a couple of them a day and thought that they worked pretty well then I moved to Texas without thinking about the transfer factors again. I woke up one night with an attack, in the middle of the night, and I had the most severe pain that went all the way up my arms, across my shoulders, and down my other arm. The pain was just tremendous. I took pain medication that I had and it just did absolutely no good. I remembered when I was getting ready to move that I had just gotten the transfer factors. I thought that now would be a good time to find out just how good transfer factors are, and I started to take them. I mean I was desperate. I took them for two days and the pain started to lessen somewhat and I continued to take them four times a day and after about three days I could hold a cup of coffee without the pain. After five days, I could fix my own meals and then after about seven days I could do most of my housework except making the bed. I continued to take that amount and about nine days I could resume my normal routine. I went to the doctor after the snow melted and he told me that I had experienced a severe attack of Bursitis when I was moving but something else had also happened that I had noticed. I went through the summer, I went through last winter, and up to now I have had no allergies and no asthma, not even one attack." A. W., Texas
