Newsletter - Testimonials, Transfer Factor

2013-07-09

My website readers know my [cancer survivor story](#). This week's newsletter contains the stories of other cancer survivors who tell very different stories of how they rid themselves of cancer.

These cancer patients have given permission for their statements to be printed for the benefit of the reader.

Testimonies give each patient's experience before, and after taking Transfer Factor.

Not all cancer patients can afford to go [Mexican cancer clinic](#) I went to in Tijuana, Mexico, but most all can afford to take [Transfer Factor](#) (TF).

Testimonies include those with:

(Unstated type) Cancer

Bone Cancer

Breast Cancer

Lung Cancer

Pancreatic Cancer, and

Thyroid Cancer

Newsletter, Testimonials 2013-07-09

Cancer

My husband had been battling cancer for about 2-years now and his prognosis was not good.

He's had cancer for several years prior to being diagnosed, and wasn't really expected to survive. He's endured two rounds of chemo, and his cancer returned in 6-months.

He had to go for more chemo that was even more grueling than his first treatment, and it completely devastated his immune system. He was ill all the time and continued to experience symptoms of his illness, including bleeding from the portion of the tumor that was not able to be surgically removed, as-well-as overall body pain and fatigue.

Within 24-hours of starting enhanced [Transfer Factors](#), he said he felt just a dramatic increase in his energy level and diminished body pain. And within 72-hours of taking enhanced Transfer Factors, his bleeding stopped.

The most exciting thing of all is that his tumor has started to shrink, and he has been on Transfer Factors, only, (since this past August) and, he is now in his eleventh-month of being cancer-free.

The only set-back that we have had is when we ran out of enhanced Transfer Factors and his bleeding started up again right away. Within 24-hours of restarting the enhanced Transfer Factors, the bleeding stopped, and we decided that we would never be without this miracle product again.

We have put our children on it. I am pregnant and taking Transfer Factors. My daughter's allergies have vanished, and no one has had a cold or sniffle, or anything, since we started this. It really is a fabulous product, and I encourage everyone to get on [Transfer Factor](#), and get your kids on it too.

Sharon S.

Bone Cancer

My name is Shaylee; I am 19-years old. Last June, I was diagnosed as having Ewings Sarcoma, a rare form of bone cancer.

While on chemo, I met a woman who recommended [TR+](#). I took four-TF+ twice daily, and there was immediate improvement in my well-being. But more importantly, I was able to stop taking nausea tablets. I no longer take morphine for pain. From taking 25-tablets a day, which the oncologist prescribed, I take a few TF+ and was free of pain and nausea.

I now have a clearance of cancer all of which I attribute to the miracle of TR+.

Shaylee, NZ.

Breast Cancer

My name is Rosliah, and I have suffered from stage-4 Breast Cancer since April 2003.

During the cancer treatment in 2003, I went through one surgery, 6-cycles of chemotherapy and 20-sessions of radiation therapy.

In 2005 my cancer re-occurred; and again, I had to undergo a surgery, 3-cycles of chemotherapy, and 33-sessions of radiation therapy. I tried all sorts of supplements introduced by my surgeon including, [Transfer Factor](#).

I started taking Transfer Factor and felt that it helped a lot when I had to go through the chemotherapy. I took Transfer Factor Plus and Riovida. Transfer Factor helped to energize me and kept me strong to face the chemotherapy and radiation therapy.

I took Transfer Factor for a year and then stopped. In 2007 I developed abdomen cancer, and my body became extremely weak. Again, I started to consume Transfer Factor Plus and Riovida; and thereafter, my health gradually improved. Radiation therapy causes one to feel extremely weak and exhausted. Transfer Factor actually helped me feel more energized, eased my fever, and in general helped my body to deal with the radiation. Now that my health has improved a lot; I am able to be more focused at work and lead a more active lifestyle.

My advice to those with similar health challenges, especially to patients undergoing radiation therapy or chemotherapy is their treatment is to: Please take [Transfer Factor](#), because it is extremely effective!

Rosliah Bt Mohd Masri, 47 years old, Female, Putra Heights, Selangor, Malaysia.

Lung Cancer

My name is Dena Guidice and I want to share with you how [TF](#) has saved my life.

In November of 1998, I was diagnosed with Lung Cancer.

At that time, my team of doctors recommended that the best course of treatment for my cancer would be to perform radiation and chemotherapy simultaneously.

I got started with both treatments immediately and was given the highest dosages of treatment possible.

Over the next 90-days, I suffered from all of the normal side-effects including weakness, vomiting, hair loss and severe weight loss. My radiation and chemo treatments ended late February 1999. On March 25th, 1999, I went in for surgery (as planned), and the doctors removed a tumor from my right lung along with the top 1/3rd of my lung and three sections of my ribs. The surgery went very well, and the doctors believed that they had successfully removed all of the cancer from my body.

After my surgery, I went through an additional 12-weeks of chemotherapy from May to July 1999, as a "Safety Measure." It was during this time that my body became so weak that all I could do was sleep and lie in bed all day. I lost all of my hair at this point, and my fingernails and teeth became so brittle I started to lose them as well. I lost my appetite completely and got to the point where I weighed only 88-pounds.

Even as sick as I was in the summer, I was still hopeful that by fall I would get stronger after the chemotherapy was out of my system. My hope was short lived, however.

In August, I found a lump under my left arm. After another surgery to remove that tumor, the tests confirmed that I had malignant lymphatic cancer (Lymphoma - cancer of the lymph nodes) and that the cancer was all over my whole body.

At that point in time, my team of doctors told me there was nothing else they could do for me. I had stage-4 (final stage) cancer and I had a maximum of 4 to 6 months to live. They told me to do everything I've always wanted to do in life within the next 45-6- days, because after that, I would be much too weak and too sick to do anything whatsoever.

By this time, I was convinced that I was going to die – especially since the doctors had never seen a person live beyond 8-months in my condition, with my kind of cancer.

At this point, I shared the devastating news with my kids, and we all took a trip to Hawaii. In my own mind, I knew that this would be my "farewell trip". I had given up every ounce of hope, and I had mentally prepared myself to die.

It was at this time (1st week in October) that my son finally convinced me to start taking Transfer Factor. In my mind, I was 100% convinced that it wouldn't do anything for me, but non-the-less, I started taking six transfer Factor Plus and six regular Transfer Factor capsules every day.

Within 30 days, I started to feel a little stronger and regained my appetite, but I still believed in my mind that my life was soon to be over. I kept taking the product.

By January 2000, about 90-days after starting on Transfer Factor, I found myself even stronger and had gained back 7-pounds. I continued taking Transfer Factor every day.

It's now been 7-months since I started taking Transfer Factor (May 2000). I've now gained a total of 26-pounds, and I feel healthier than I've felt in over 2-years.

I just went to see my doctor 2-weeks ago, and he said, "You're a living Miracle!", and that I have no signs of cancer. Transfer Factor has not only saved my life, it has given me hope for tomorrow and the years ahead.

Pancreatic Cancer

I have a patient who has Pancreatic Cancer, and about 4-months ago, he was given 3-months to live.

He had been taking **TF+** for 8-weeks (taking 8-TF+ per day).

He went to the doctor's office to have his blood tested. After the tests the nurse came out and asked if he had had a transfusion, because the nurse couldn't believe how good his blood looked.

Does taking TF+ affect the immune system? I'd definitely say so!

Mike

Thyroid Cancer

My name is Carlos P., and I'm 37 years old.

Two months ago I was diagnosed with papillary thyroid cancer. The pathologist said that he was 95% sure that I had papillary thyroid cancer.

Well, I didn't believe him; so, he gave the results of two other pathologists on blind study who confirmed, that indeed, I did have cancer.

I was already following a nutritional program, so on top of that, I started taking one-**Transfer**

[Factor](#) three-times a day, and two-enhanced Transfer Factors three-times a day. I took those on top of my baseline nutritional program for two solid weeks before my operation.

They removed the entire thyroid, and they could not find any cancer whatsoever. By the way, I have the lab results saying that I had cancer, and the follow-up lab results stating that I don't have cancer.

I am really happy with the results.

Thank you for visiting my website and Newsletter, Testimonials 2013-07-09. Our newsletters are sent monthly to subscribers. To subscribe, go to my [Comment](#) page, noting you wish to subscribe to Newsletters.

I wish you and your family the best of health and happiness. My husband and I take Transfer Factor, and hope you will too.

Request Mexican Clinic Contact Information

What to do now:

1. Complete the request for information located just below.
2. Receive, and read, the email which will be returned to you immediately after completing the form below *(it will be sent to the email address you provide)*.
3. If you would like: Call and speak with me and/or my husband, Peggy Sue & Jim Roberts. We have 7-years' experience with Mexican cancer clinics. Our phone number and email address will be provided in our emails.
4. Also, if you would like: Call the clinic to obtain a **'Free Confidential Medical Evaluation'**.

5. If you are accepted as a patient, reserve your space, and go to the Mexican Cancer Clinic.

What you'll receive

after submitting the 'Request' below . . .

- clinic name
- doctor's name and contact info
- patient coordinator contact info
- phone numbers
- website and email addresses
- my personal referral to the doctor
- treatment fees for first 3-weeks (*as an out-patient*)
- average length of treatment stay at the clinic
- Much more info, ie: hotel accommodations, travel arrangements to and from the clinic, funding options, safety of the Tijuana business district, statistics of treatment success
