TRANSFER FACTOR "Advance"

Transfer Factor "Advance"
Tri-Factor Formula

Contains Pure Transfer Factor

Recommended for:

- Auto Immune Dysfunction
- For Prevention
- Safe for infants

4LIFE TF TRI-FACTOR ADVANCE
ITEM# 170024070
BFAD# FR-63738
HALAL CERTIFIED Islamic Food & Nutrition Council of America
PATENT# 6,468,534

4LIFE TRANSFER FACTOR™
Tri-Factor™ Formula
DIETARY SUPPLEMENT 60 CAPSULES

TRANSFER FACTOR TRI-FACTOR FORMULA

Transfer Factor Tri-Factor Formula, originally known as the "Transfer Factor Original or Advance" has 300mg of Transfer Factor per capsule (highest mg of Transfer Factor), and is highly recommended as adjuvant or adjunct to medicine for Auto Immune Dysfunction, Bacterial/Virus Infections, Cardiovascular Diseases, Neurological Diseases, Brain Tumor, Cancer and Leukemia e.g Diabetes, Goutic Arthritis, Rheumatoid Arthritis, Osteoporosis, Allergic Rhinitis, Severe Atopic Dermatitis or Skin Asthma, Eczema, Psoriasis, Allergy, Kawasaki Disease, Lupus, Multiple Sclerosis, Severe Asthma, Severe Vasculitis, Sepsis with Meningitis, Septicemia, Acne, Vertigo, Migraine, Ulcer, Leptospirosis, Dengue, Hypertension, Stroke, Patients due for Angioplasty and By-Pass Operations, Multi-Drug Resistant TB, Multi-Drug Resistant Leprosy with Leprosy Reaction, Erectile Dysfunction, Blighted Ovum, Low Sperm Count, Alzheimer's Disease, ADHD, Depression, CNS and other mental problems, Poor Memory, Renal Failure, Kidney and Liver Diseases, and all types of Tumor and Cancer, etc.

Many people love this product because its effect is like having a **Stem Cell in a Bottle**. My wife Dr. Catherine Mendoza, Pediatrician, uses it for all her Dengue patients. Imagine a 3 year old toddler with 10,000 platelet count, bleeding nose and mouth, after taking Transfer Factor Tri-Factor formula 5 capsules 3X a day, in just 2 days went up to 150,000 platelet count normal without blood transfusion! The question is where does the platelet come from? The platelet volume came from the bone marrow's stem cells which differentiated into platelets. Isn't that a natural stem cell reproduction by our own body? What can be more safer than this? Transfer Factors were tested in vitro to multiply and increase one's Natural Killer Cell Activity (killing rate) by 283% in just 2 days (please see following pages to learn more)!

Dr. Ma. Luisa Venida, Dermatologist and Founder, Skin Research Foundation of the Philippines uses Transfer Factor for cancer and leprosy. One elder man had cancer on the face which caved-in his left face. Meaning, he lost his left face. After taking Transfer Factor 5 capsules 3X a day for 2 months his left face came back to normalcy. If that is not stem cell reproduction, then what is it? The face came from facial tissues; facial tissues came from facial cells; facial cells came from stem cells in the bone marrow; therefore, these stem cells differentiated into facial cells, into tissues and thus became the face!

Transfer Factor, in short helps boost the immune system to activate the stem cells by 283% . Another patient 19 yo boy suffering from leprosy was dying and almost lost his liver due to complications. After taking Transfer Factor, his liver became 100% brand new. If that isn't stem cell reproduction, then what is it? So, the stem cells in the bone marrow multiplied and differentiated into liver cells; liver cells became liver tissues and eventually came a brand new liver organ.

PRICE: Pesos 2,845 per Bottle (60 capsules)

DOSAGE: Maintenance - 2caps/day; Sick - 4caps/day; Severe - 6caps/day; Cancer - 10caps/day

[Disclaimer: Transfer Factor is not a cure, nor a drug. Transfer Factor EDUCATES, BOOSTS AND BALANCES THE IMMUNE SYSTEM, making our immune system intelligent, awakened and multiplied and then balanced.]

ABOUT TRANSFER FACTOR:

Transfer Factors (TF) are one of nature's most elegant form of immune communication. It awakens our sleeping immune surveillance cells to do its job properly. This is the new science called, Transference Science, the new science of longevity, or restoration biology. This molecule can make you 30 years younger if you take it for one year. TF is responsible for keeping our arteries young and healthy by a process called internal homeostasis, the general cleaning of all our veins from molecular debris brought about by toxins, or foreign bodies that enter our blood system. So, with TF, our whole body enjoys massive cleansing internally speaking, thus resulting into youthfulness and our cells are replaced with new cells. As a result, the skin becomes younger and smoother via enhanced skin integrity technology. This results further into internal beauty and recovery of the cells within producing external beauty. This has a domino effect to all the other organs of the body, thus, making the immune system fully optimized, preventing diseases, and restoring the body cells to its original form.

"Transfer Factor is a miraculous discovery that was first made in 1949 - a tiny molecule in white blood cells, a communication molecule that helps alert immune system cells to what they ought to be doing", says David Lisonbee, CEO & Founder of 4Life Research LLC, Sandy Utah USA.

In medical parlance, according to Kirkpatrick, et. al, "Transfer Factors are peptides consisting of 44 amino acids. Transfer Factor molecules are smaller than antibodies and just one third the size of a virus and have molecular weights of less than 10,000 daltons (between 3,500 to 5,000 daltons). Transfer Factor (TF) (produced by 4Life Research, USA) is a hypoallergenic product, free of casein, lactoglobulins and other large proteins, but it does contain intact cytokine fractions identical to leukocytic cytokines. Academician A.A. Vorobiev of the Russian Academy of Medical Sciences points out that unlike other immunomodulators Transfer Factor has a wide spectrum of activity, is safe, is administered orally, has no contraindications or

side effects, and is effective both in adults and children."

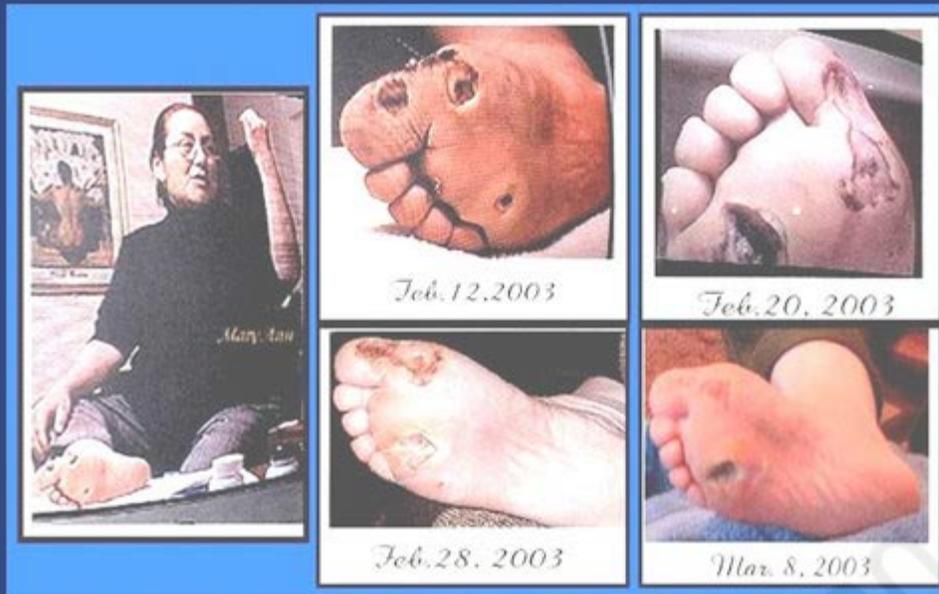

According to the book of doctors, PDR Physician's Desk Reference edition 2012, Transfer Factor (TF) is an immunologic information molecule (meaning made by the immune system) which contain antigen information which educates, boosts, and helps maintain immune system balance. TF is the best Adjuvant or Adjunct to medicine, meaning it works well with medicine to make your recovery 437% faster because it can EDUCATE, BOOST AND BALANCE your immune system army to tow away and destroy toxins and other antigenic stimulus e.g. bacteria, virus, parasites, fungal and tumor cells from your body. So, your body becomes free from any molecular debris from head to foot. When you are finally clean, disease will cease to be. So, if you take this daily, then you become clean everyday as toxins are wiped away daily. Remember toxins come in to our body 24/7 due to the influx of pesticides, formalin, NO3 and other chemicals in our fruits, vegetables, meat and almost all our food are now contaminated, even milk from our mothers. Our immune system cells are generally dumb (mangmang) thats why 36 vaccines as a baby provided us with 36 information to recognize a very limited number of pathogens, but with Transfer Factor, you are enjoying UNLIMITED IMMUNOLOGIC INFORMATION as it is extracted from cows colostrum and chicken egg yolks. Of thousands of animals the cows and chickens won because of their super heroic immune system because they can build immunologic information on real time basis. Mother's colostrum in the first three days also contain TF but with limited information, but still it bridges the generational gap by passing cell mediated immunity from mother to infant with 500,000 immunity codes.

Ever wonder why cows and chickens don't die of dengue? Have you read in the papers cows dying of dengue? (Nabalitaan nyo ba BAKA dedbol sa dengue?) None. Why? They have something we don't have, and thats Transfer Factor with Unlimited Immunity Codes. So, we might as well get it from them for MOTHER NATURE HAS GIFTED THEM with TRANSFER FACTORS WITH UNLIMITED INFORMATION so they will not become extinct in the wild. Otherwise wala na tayong breakfast . This is free from Ig (Immunoglobulines or antibodies) and hormones of the cow and chickens because it passed through our Patented Dry Bio-Tech Ultra-Filtration Extraction Process Machine. Transfer Factor is common in all of the animal kingdom (that includes humans) as clinically proven by science. Meaning, it is not foreign to humans even if it comes from animals. Doctors who are now using TF enjoy overwhelming success in their practice because TF is a Toxin Remover, a Pathogen Detector or a Virus Protection Software, wherein antigen stimulus not yet known to doctors or not yet written in the books of medicine are already recognized by the cows and chickens. If you ask me why some cows die of mad cow disease and why do birds die of bird flu, well, these animals have compromised immune systems due to exposure to hormones, pesticides, antibiotics and other drugs. So not all cows and chickens are the same. Our cows and chickens in Sandy, Utah USA are free from all of these thats why our 4Life Research Manufacturing Plants are APPROVED BY THE FDA. Our bottles are on the other hand APPROVED by the GRAS (Generally Recognized As Safe) USA. In the Philippines, we are APROVED BY BFAD.

Evidence Based Clinical Studies

LEVEL 3 CATEGORY A PHASE 3:

Mary Anne Myers, aged 45, has diabetes and was on 500mg of Glucophage. She started taking 8 Transfer Factors per day and sprinkling 2 capsules directly on the wound for one week. She's now taking 6 capsules per day and continue sprinkling Transfer Factor on the wound. Here are the remarkable results in just

March 1999, Monterrey, Nuevo Leon

TITLE: 25 YEARS OF CLINICAL EXPERIENCE WITH TRANSFER FACTOR
AUTHORS: Giancarlo Pizzi¹, Caterina De Viner¹, Adolfo Pizzarello², Dimitri Viza³
INSTITUTION: 1- Immunotherapy Unit, 1st Division of Urology, S.Orsola-Malpighi Hospital Bologna, Italy; 2- Department of Computer Sciences, University of Bologna, Bologna, Italy; 3- Laboratoire d'Immunobiologie, Faculté de Médecine des Saints-Pères, Paris, France.

ABSTRACTS:
Patients. From April 1974 to January 1999, using TF produced in our laboratories, we treated a total of 1647 patients (pts) suffering from persistent viral infections viz. hepatitis, herpes, herpes zoster, giant condyloema acuminatum, conjunctivitis, herpes keratitis and keratouveitis, (439 pts), cancer, viz. Prostate, lung, renal metastatic, transitional cell carcinoma of the bladder (TCCB), EBV-related naso-pharyngeal carcinoma (NPC), gastrointestinal (GIT), ovary, uterus, Burkitt's lymphoma, breast, glioblastoma (643 pts), recurrent cystitis and candidiasis (287 pts), chronic fatigue syndrome (74pts.), AIDS (51 pts) and/or various congenital and/or autoimmune disorders, e.g. retinitis pigmentosa, chorioretinitis, uveitis, Bechet's syndrome and Lapeyronie's disease (153 pts).

Methods. TF was extracted from buffy-coats of blood donors or produced in vitro using lymphoblastoid cell lines and, in this case, it was specific for one of the following: HSV, hepatitis B virus, candida albicans, HPV, HHV-6, varicella-zoster, HIV. In most cases, TF was the only treatment. However in several cancer and AIDS patients it was included, in a strategy of immune-modulation, as an adjuvant of chemotherapy (Burkitt's lymphoma), surgery and radiotherapy (NPC, lung carcinoma, GIT, ovary, uterus, breast, breast, glioblastoma), hormone therapy (metastatic carcinoma, GIT, ovary, uterus, breast, glioblastoma), hormone therapy (metastatic prostate cancer), trans-urethral resection and complement-fixing anti-tumour antibodies, interleukin-2 (IL-2) and interferon-alpha-2 (a-IFN) instillation in the urinary bladder for the immunoprophylaxis of TCCB, IL-2 and a-IFN for metastatic renal cancer, and antiretroviral therapy for AIDS. The duration of the treatment ranged from 6 to 127 months. TF was administered i.m. or orally. In 279 patients with recurrent ocular disease (139 herpes keratitis; 47 kerato-uveitis, and 93 uveitis) HSV-specific TF was orally administered for at least 3 months with a mean duration of 687 days, whereas the entire follow-up period was 365913 before and 191772 days after the TF treatment.

Results. A statistically significant increase of survival and decrease of the frequency of tumor relapses compared to the control groups was observed in cancer patients (P<0.001). Improvement of the liver biopsies and of many biochemical serological parameters was observed in hepatitis B patients at the end of a 6 months treatment. The cell mediated immune response against the viral antigens was significantly increased (assessed by the lymphocyte stimulation and leukocyte migration tests) (P<0.001) in the TF-receiving

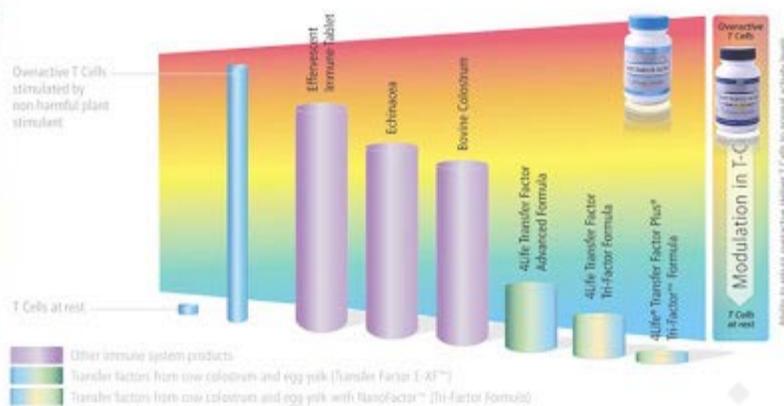

What can Transfer Factor do for you?

3 BALANCE

4LIFE TRANSFER FACTOR TRI-FACTOR FORMULA

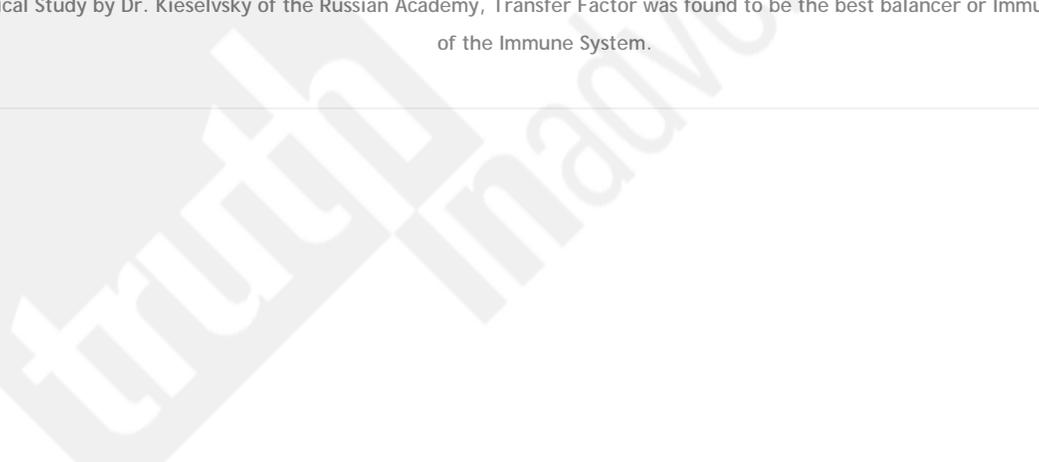

Helper T-Cell Graph Modulates Helper T-Cell Activity

Based on results from multiple, repeated tests conducted by 4Life researchers during 2007 using an FDA-approved diagnostic, Cow-Medical Transfer Factor in vitro assay. This test reacted with Helper T cells (T cells) at rest. A non-harmful, plant-based stimulant was then introduced to the T cells, resulting in a large increase in T-cell activity. In this case, the high level of T-cell activity is not necessary because the stimulant is not harmful; the T cells are actually in a state of over-activity when they should remain in a state of rest.

Different stimulators were then introduced to the overactive T cells to see which would bring the T cells back into healthy balance. 4Life Transfer Factor Tri-Factor Formula products most effectively calmed overactive T cells back to their initial resting state.

In a Clinical Study by Dr. Kieselsky of the Russian Academy, Transfer Factor was found to be the best balancer or Immuno-Corrector of the Immune System.

L-R: Dr. Ricardo Fernandez with Dr. Elizabeth Ifurung, US Ambassador Harry Thomas, Dr. J. Ongsiako, and Cherry Miguel

Dr. Ricardo Fernandez, MD, Chairman of Makati Medical Center's Department of Otonrhinolaryngology (ear, nose, and throat) comes from a family of doctors. His father, the late Dr. Manuel C. Fernandez, was one of the founders of MMC and a brother, Manuel Jr., specializes in cosmetic surgery at the same hospital.

His latest "discovery" is a product called **Transfer Factor**, sourced from colostrum found in mothers' and cows' milk, eggs, and chickens. According to Fernandez, Transfer Factor contains the information molecule that educates the immune system. **"With Transfer Factor,"** he points out, **"a person's immune system is able to correct itself."**

He cites the case of his mother, now 90, whose heart and body were strengthened by CoQ10 and who was **able to regain her vitality after taking Transfer Factor.** **"Now, believe it or not, she is back to her old self!"** - Phil. Star, July 31, 2012 by Alice Reyes, Health & Family Section

Click the above slide if you want to read the Philippine Star article about Transfer Factor as highly endorsed by Makati Medical Center's Chairman, Dr. Ricardo Fernandez.

TESTIMONY ON ERECTILE DYSFUNCTION (15 YEARS E.D., AND RECENTLY UNDERWENT BY-PASS OPERATION)

PHYSICIAN: DR. DELICIAFLOR PEREA, OB-GYNE
PATIENT: MANUEL D., 73 YO MALE (2009)

REGIMEN:

TF TRI-FACTOR 2 CAPS 3 X A DAY

TF CARDIO 1 CAP 3 X A DAY

RESULTS: NORMALCY IN 1 MONTH

*If you want to bring back that **fire in your sexual life**, and feel like you're 18 years old, take Transfer Factor Tri-Factor Formula and TF Cardio or TF Riovida (see product below) to experience flag ceremony in 30 days (he he). Many women age 70 up said they are dry but after taking above regimen, they say they are always wet :)*

TF Cardio™

The Most Effective Cardiovascular Supplement Ever!

Block Oxidative Damage

Selenium, Copper/Zinc, Resveratrol

GREAT NEWS EVERYONE!

Daniel O., 14 year old child, took 1 capsule/day of BioEFA for two months and his grades in school went up from 75 to 95!!

Do you know that the brain is 30% omega-3 and 30% omega-6 fatty acids?

If you want to become **More Intelligent & Sexier**, here's our latest product: BioEFA with CLA!

What is BioEFA with CLA? BioEFA with CLA is 4Life's superior source of essential omega-3 and omega-6 fatty acids. This product is made from flaxseed oil, safflower oil, borage seed oil, and fish oil. Recently reformulated, this wellrounded blend of essential fatty acids (EFAs) now contains more than four times the fish oil (1,000 mg) per serving! According to the American Heart

Association, "Omega-3 fatty acids, particularly by EPA

and DHA, have been shown to benefit the heart of healthy people, and those at high risk for - or who already have- to cardiovascular disease."

PRIMARY SUPPORT:

Brain

Cardiovascular

SECONDARY SUPPORT:

Weight Management

Wellness

Essential Fatty Acids

Key Features

• EFAs provide benefits to the cardiovascular and nervous systems and offer support for healthy skin, respiratory function, and proper immune system.

• BioEFA utilizes EFAs from a

variety of sources to help ensure well-rounded product including DHA and EPA from fish oil.

• CLA (Conjugated Linoleic acid),

primarily found in meat and dairy products, has been shown to support cardiovascular and circulatory health. The CLA used in BioEFA is from the natural source of safflower oil, and together with borage seed oil and flaxseed oil, aids the beneficial nutritional support of EFAs.

• GLA (Gamma Linolenic acid) is an omega-6 fatty acid and ALA (Alpha Linolenic acid) is an omega-3 fatty acid. Both

provide support for the cardiovascular system.

4Life BioEFA

Our Latest Product

Supplement Facts

Serving Size: Two (2) Softgels
Servings Per Container: 30

Amount Per Serving	%DV*
Fish Oil Blend 1000 mg	†
containing 300mg EPA and 200mg DHA	
Plant Oil Blend 570 mg	†
Flax (<i>Linum usitatissimum</i>) seed oil 55% Alpha Linolenic Acid (ALA)	
Borage (<i>Borago officinalis</i>) seed oil 23% Gamma Linolenic Acid (GLA)	
Safflower (<i>Carthamus tinctorius</i>) seed oil 70% Conjugated Linoleic Acid (CLA)	
*Daily Value	
†Daily Value not established	
Other Ingredients: Gelatin, glycerin, purified water, and mixed tocopherols.	

Now Available!
Get Your Orders Now!

It's now easy to get the nutritional benefits of omega-3 and omega-6 essential fatty acids. Try the recently reformulated BioEFA™ with CLA! With four times more fish oil (1,000 mg) per serving, the ingredients in BioEFA with CLA have been shown to provide valuable health support for cardiovascular and nervous system function.

TESTIMONIALS about Transfer Factor

Stage 4 Dengue vs. Transfer Factor

**TESTIMONY ON STAGE 4 DENGUE
HEMORRAHIC FEVER WITH MUCUCUTANEOUS
AND RENAL (KIDNEY) BLEEDING
PLATELET COUNT ONLY: 16,000**

**PHYSICIAN: DR. CATHERINE MENDOZA, PEDIATRICIAN
JULIET S., 21 YO FEMALE (2008, ST. LUKES HOSP.)**

**REGIMEN:
TF PLUS 5 CAPSULES 3 X A DAY**

RESULT: PLATELET COUNT IN 3 DAYS = 300,000

*Note: More than 200 SUCCESSFUL DENGUE CASES with FULL RECOVERY UNDER
DR CATHERINE MENDOZA todate and counting!*

Dr. Catherine Malonzo-Mendoza, Pediatrician is a visiting Consultant at St.Lukes Hospital. She is holding clinic at World Citi Medical Center Rm207 Mondays to Saturdays (10:00AM-3:00PM)

Angioplasty Cancelled in 3 Days Just Using Transfer Factor

**TESTIMONY ON 4 CLOGS IN THE HEART
ARTERIES DUE FOR ANGIOPLASTY
(HOSPITALIZED DUE FOR HEART OPERATION
COSTING PHP1.2 MILLION)**

EDWARD D., 56 YO (ILOILO)

REGIMEN:

TF CARDIO: 2 CAPS 3X A DAY

TF RIOVIDA : 30ML 3X A DAY

**RESULT: "LABTEST SHOWED NO MORE CLOGS
ON THE 3RD DAY. SURGERY WAS CANCELLED,
MY BROTHER WAS DISCHARGED FROM THE
HOSPITAL AND WENT STRAIGHT TO
WORK☺" - MSGR. JOSE DELFIN, PALAWAN**

Transfer Factor vs Dengue Outbreak

You may visit this link below to read an article from People's Journal dated August 19, 2011 written by Manoling Morato in his column 'UNCENSORED':

<http://www.journal.com.ph/index.php/opinion/11597-dengue-outbreak-2>

Please pass this on so you will save lives... To prevent Dengue please order Transfer Factor now and please call these phone numbers: 09339741997 and 0919-2236110.

Or order online at <https://7396856.4life.com/>

Select your country and then purchase Transfer Factor Tri-Factor Formula:

Dosaging for Dengue : 5 capsules 3 x a day for 2-3 days (Please see a doctor to manage and monitor the patient's platelet count, white blood cells and hematocrit readings). Thank you and God bless.

Transfer Factor, an Immunomodulator Molecule

Transfer Factor, an Immunomodulator Molecule

by Billy Bascuguin, Medical Researcher

Part 1

Introduction

Before we begin, let us look at our current situation. Today we face many health challenges and among these are:

- New and Emerging Diseases
- Increasing Antibiotic Resistance
- Return of Old Germs (Tuberculosis, Leprosy, etc.)
- World Travel (leading to the rapid spread of new diseases)
- Multiple Areas of Stress
- Aging Population

Millennia ago, Hippocrates stated "Let thy medicines be thy foods and thy foods be thy medicines." Recently, Professor John D. Potter expressed the same sentiment. "Cancer may be the result of reducing the level of intake of foods that are metabolically necessary."

Drugs are placed between disease and predisease. Drugs replace or suppress a body function but do not strengthen a body function. Drugs may restore us to a state of predisease but not to a state of health. For example, a person with a weak immune system may use an antibiotic to replace their inadequate immune response but this does not make them any more capable of fending off the next exposure. There are times when drugs are immediately essential and in each case the reason can be found in a failure of the normal body functions. There is no such thing as a drug deficiency. Put another way, a headache is not a deficiency of Tylenol! On the other hand, there are many deficiency diseases which, when the person is adequately supplemented, disappear completely and the person is able to regain full health and not just a weak, predisease status. What should be clear is that, contrary to our current use of drugs as a first option in fighting disease, drugs should be a last option.

Strengthen the body systems through intelligent supplementation should be our first action to maintain and improve our health. One of the most important of our systems is the immune system. Our immune system is an intricate, interrelated defensive force made up of trillion cells. Our health, quality of life, and indeed our very survival, depend on the effectiveness of our immune response. Our immune system protects us by recognizing germs and cancerous cells, reaching and destroying these intruders and finally by remembering these pathogens and cancers as a defense against future invasions. In addressing the importance of the immune systems, Prof. Paul Ewald, the author of *"Plague Time: The New Germ Theory of Disease"*, stated that if a person has the choice between all the drugs in the world and his immune system, he better keep his immune system.

Supplementation in support of our immune system is the single most important action we can take to protect our health and regain control of our health care because no other body system can function properly without a functioning immune system. Today, many factors contribute to the general weakening of our body's defenses. We will examine the nature of the innate and adaptive immune systems and consider the recent research on natural agents that can potentially save lives thereby enabling us to make choices that can improve our health and protect us in an increasingly dangerous environment. This article will focus on those essential dietary components which have shown outstanding ability to strengthen and support the immune system. Primary among these supplements is **Transfer Factor**.

TRANSFER FACTOR

Introduction: What is Transfer Factor?

While introducing Tuberculosis in the late 1940s, Dr. Sherwood Lawrence discovered that the immune competence of a donor could be transferred to a naive recipient by using low molecular weight extracts obtained from white blood cells. Dr Lawrence called these small molecular extracts Transfer Factor (TF). If the thymus gland can be compared to a grammar school and prep school, TF can be compared to collegiate and graduate level training for the immune system. Scientists later found TF to be universally effective regardless of the differences between the species of the donor and the recipient. This aspect of TF is partly explained by this core scientific belief; the more essential a material or structure is to living organisms, the more common it is to see this material or structure throughout living systems. TF are essential components of even the most primitive immune systems.

Unlike antibodies that are large molecules, Transfer Factors are quite small. In fact, their size helps to make them non-allergenic. And while antibodies are used up when they attach themselves to the offending cells or protein, Transfer Factors perform a different role. They are immune messenger molecules that educate and alert naive immune cells to an impending danger. In this regard, Transfer Factors perform a catalytic role in the immune system triggering the effect without being consumed.

BENEFITS OF TRANSFER FACTOR

The exciting benefits of Transfer Factor, the essence of the immunological message, could spark a revolution in medicine. The need for such a new weapon in our immune arsenal is clear. "Transfer Factor has an important role to play in modern medicine which, from AIDS to Ebola, faces from the emergence of new viruses or the resurfacing of old pathologies such as Tuberculosis". Nevertheless, there are many who resist new ideas, regardless of their benefits.

The benefits of Transfer Factor have been reviewed and the proceedings of the Tenth International Symposium on Transfer Factor have been published. These reports cover the **successful use of** Transfer Factor in addressing viral, parasitic, fungal, malignant, neurological and autoimmune diseases. Transfer Factor has been shown to be beneficial to all age groups, from children to the elderly. The benefits from human use of animal-derived Transfer Factors have been demonstrated. In most of the published research on the use of Transfer Factor, disease and malaise were present, but the real power of Transfer Factor is actually in prevention. The use of Transfer Factor in the prevention of illness and the maintenance of health is its greatest potential benefit and its safety when used chronically

has been well established. The future of financial burden of medical care could be curved significantly by the general use of Transfer Factor.

SOURCES AND SAFETY OF TRANSFER FACTOR

Transfer Factor was first discovered inside the human white blood cell. Two patents currently govern the commercial production of Transfer Factor from colostrum and chicken egg yolks. Transfer Factor has an excellent safety record, and no adverse side effects have been reported. This has been shown even when Transfer Factor was administered in extreme excess or over several years. Infants and the elderly are the two groups most at risk for infection. Oral administration of Transfer Factor is convenient and easily accepted by all age group.

In addition, over 3,500 papers have been written on Transfer Factor since it was first reported in 1949. Studies in the human use of Transfer Factor have been shown how it can relieve unnecessary suffering simply and safely.

THE INNATE IMMUNE SYSTEM

The innate immune system is made up of various receptors, natural antibodies, messenger molecules (such as interferon), complement proteins, and natural killer (NK) cells. The innate immune system is our first-line of defense against cancer and infectious diseases. The innate response works by recognizing distinct patterns in microorganisms and reacting to them. This pattern recognition is innately coded into our immune system DNA and does not require us to have prior exposure to th microbial agent. In the past, the innate immunity of vertebrates had been considered archaic and obsolete, but today, the innate immune system is regarded as essential to the function of adaptive immunity and survival.

To be continued(Part 2 - Natural Antibodies)

[Do you know that Transfer Factor can make you 4 years younger in just 6 weeks?](#)

Transfer Factor is a Modifier of Biological Age

A.G. Chizhov, V.A. Santalova Russian People's Friendship University, Moscow

RESULTS: Chronological age of the group was 63.5 ± 0.7 . Before the use of TF the biological age of the group differed from chronological by -4.2 ± 0.6 years. The majority of men demonstrated a decrease in the functional activity of endocrine and of immune systems' as well as hyperfunction of the liver and of urinary bladder and hypofunction pancreatic.

CONCLUSION: The study showed that initially disturbed body system functions were significantly normalized. After the course of TF treatment the difference between biological and chronological age was $(-8.2) \pm 0.5$ years ($p < 0.05$), >

rejuvenation effect of 4 years in just 6 weeks!

Transfer Factor is a Modifier of Biological Age

A.G. Chizhov, V.A. Santalova Russian People's Friendship University, Moscow

INTRODUCTION: There is a close link between the decrease of functional activity of the immune system and aging. Thus, we decided to study immunomodulators to determine to what extent they may affect biological age indices. A new immune theory of aging (V.I. Dontsov, V.N. Krut'ko, 2002) points to the role of specific T-lymphocytes subpopulations in sustaining a certain level of normal cellular growth in the body and dwells on the importance of their functional decrease having a strong impact on aging. Stimulation of the function of these cells by Transfer Factor (TF), an immunomodulator produced by 4Life, USA, seemed a plausible method of "treating aging".

OBJECTIVE: The evaluation of the role TF in the process of aging is at the basis of this study.

METHODOLOGY: Twelve (12) men aged 55-73 were included in the study. A dose of 300 mg. of the TF product was given daily with meals 5 times a week for 6 weeks. Biological age was determined using the "APK" method ("Diagnostics of aging: biological age" (National gerontology center, Moscow)). The following biomarkers were used for making the determinations: AP (arterial pressure), pulse wave velocity, VC (vital pulmonary capacity), static balance, Shtange's test, adaptation testing, body mass, left hand strength, Shulte's test, Veksler's test, neuromuscular test, hearing frequency threshold and the SAN's questionnaire. The functional activities of body systems were evaluated by means of Nakatani's electropuncture diagnostics.

In the above scientific study, it was revealed that Transfer Factor can truly make you 4 years younger in just 6 weeks!

This means TF can actually make your arterial biological age 1 year younger every 10 days by a process called 'internal homeostasis', general cleaning of molecular debris in your arteries by your immune system soldiers. TF orchestrates the clearing activities so that old plaques are removed from the arteries making you young again. Therefore, if your arteries are clean, will you still suffer from heart disease?

Answer: NO more.

Why Antibiotics Have No Power over a Virus?

Do you know that Antibiotics mean anti-life? Since viruses do not fall under the definition of life, since viruses have no cells, this means antibiotics have no power over them. So, what can we do about this?

Answer: Let your immune system soldiers do the killing by empowering them with the ability to recognize viruses through Transfer Factor technology. Find out more on the succeeding pages why all of us, young and old and people who are stressed MUST take a look at this super molecule!

Transferceutical Science

Fortunately the answer is YES!
We finally have a breakthrough:

TRANSFER- CEUTICAL SCIENCE

THE GREATEST SCIENTIFIC DISCOVERY
OF THE CENTURY AFTER 50 YEARS OF
RESEARCH SINCE 1949!

THE MOST POWERFUL IMMUNE MOLECULES
KNOWN TO SCIENCE TODAY!

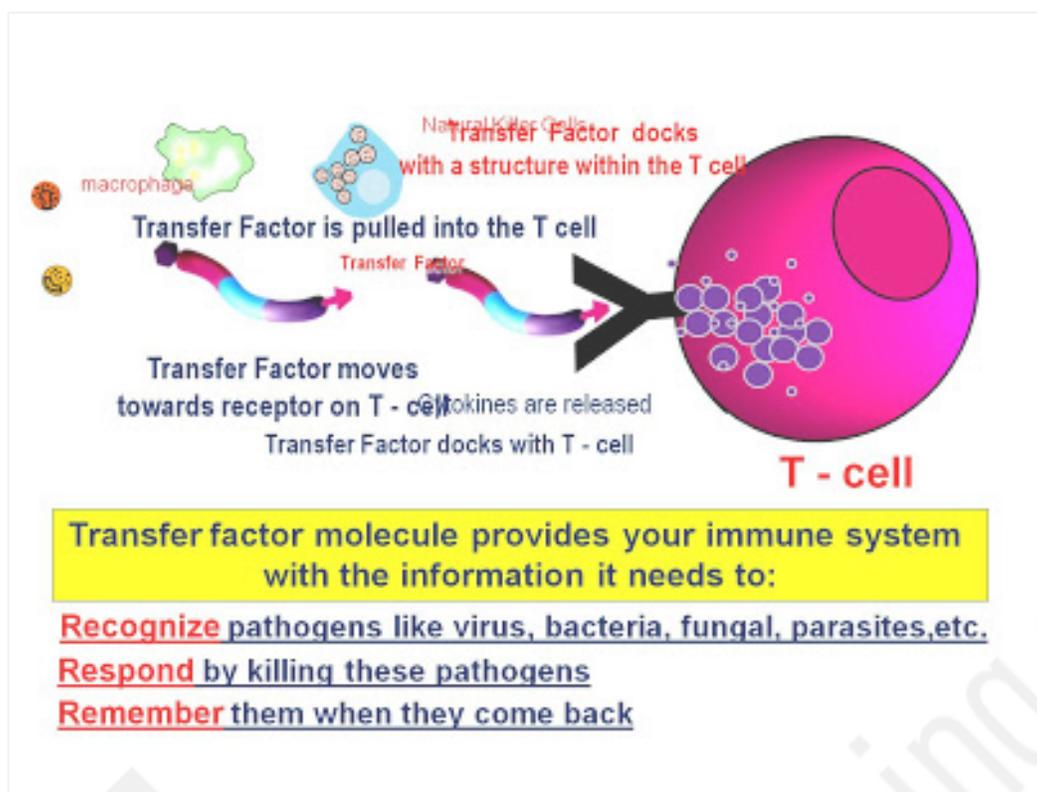

1

Transferceutical Science is the new science of longevity or restoration biology. Known as the most powerful immune molecule, Transfer Factor (TF) is dubbed as "the Greatest Scientific Discovery of the Century" after 50 years of research since 1949.

Do you know that Transfer Factor can make you 20 years younger based on scientific and clinical studies? Find out more in the next pages (go to "What is TF?").

Transfer Factor molecules provide our immune system with the information it needs to recognize, respond and remember foreign invaders of the human body to keep it from harms way. In other words, it is the wise man that teaches or educates the immune armies to be always ready so no enemy soldier can penetrate nor attack us. TF is like a cellphone load. Nobody can text without a load. In similar manner, TF loads the T-Cell with a load of information about the enemies so that the T-Cell, which is the general of the immune army will be informed about the current enemies of the human body so that the data base of information will likewise be utilized to update all the other trillions of immune soldiers via 'texting' (cytokine release in medicine), thus, upgrading the Intelligence Quotient (IQ) of the whole army. That is why TF is also known as the IQ of the Immune System.

How do you get immunity from Chicken Pox?

Educates your Immune System

Example: Chicken Pox when you've been infected in the past you become IMMUNE to that strain because your body has information on how to defeat the threat.

The infographic has a blue background with a white molecular structure icon in the top left and a white laboratory flask icon in the bottom right. A central photograph shows a young child with several dark spots (chickenpox) on their face and neck.

This we know very well that we get Chicken Pox only once, and why is that? Because our body's immune system develop the ability to recognize the Chicken Pox virus. How does that happen? Well, the macrophages, a type of immune soldier, loves to eat molecular debris and foreign bodies like viruses, will gobble up the Chicken Pox virus and begin its work; Its job is two-fold:

- 1) Process the virus into a memory or information molecule or Transfer Factor of Chicken Pox.
- 2) Present the TF of the Chicken Pox virus to the T-Cell to educate him so that all the other members of the immune army will likewise be informed and educated.

"This is the making of the immune machinery. TF is therefore the phenomenal masterpiece of the immune system", according to my friend and mentor, the late Dr. Jose Dante Panopio, Surgeon.
