

Hemoglobin Disorder, Growth in Uterus

My hemoglobin level reached 20.5 units and was on aspirin tablet to reduce my blood viscosity.

I was suffering dizziness , tiredness and other complications.

I was told to go for blood transfusion and on transfusion for 4 months and doctor plus hematologist told me there is no cure for my disease.

I tried many type of treatments and supplements. But didn't see any improvement.

I took 2 Cardio and 2 Advance 2 times daily. Within 4 months my Hemoglobin level drop to 14,5 and doctor advised me to stop aspirin tablet. **Aravindan, Acupuncture Consultant.Coimbatur, Tamil Nadu**

I had growth in Uterus with heavy bleeding plus severe pain.

Gynecologist advised me go for immediate surgery but I wanted the surgery to be done in India. In India my surgery was postponed due to severe infection.

I came back to Malaysia where I was introduced with TF.I took 2 TF Plus times daily and within a month the bleeding stopped. Within 3 months pain stopped and I went back to the same doctor, she was surprised with my recovery and she found the growth disappeared. She told me I don't have to go for surgery. **Ameerjaan, 45, Self – Employed,Chennai, TN,India**
