Leukemia Stage 3

My friend Wan sent an SMS referring me to her friend, Azman, whose sister had stage 3 Leukemia. I phoned him up and told him about transfer factor. i could not convince him through the phone. Anyway i told Wan to explain to him about TF.

On Friday i received an SMS from Azman, he said "my sister, her husband and i have decided to let her on the doctors treatment, will try TF in one month's time".

I still have the sad vision of my friend who died of leuk a few yrs ago, a young mother of 2 kids under 6yrs, i just couldn't forget the look in her eyes calling for help to cure her leuk.

Anyway on Saturday I went to AP Hospital and met Azman and family for the first time. I handed to him the book "Transfer Factor" by Rita Elkins, and the woodland newsletter as well as a brochure in BM.

On Sunday morning i sent an SMS to him and asked how whether he would be interested. He replied "Prof we have decided to put her on TF". That afternoon I went to APH and handed over to him 4 bottles of TF (AF). Since she is my first Leukemia associate, I was afraid to give anything other than the TF (AF) which is pure TF. I told him stage 3 is serious, give her 4caps three times per day.

On Tuesday, Azman sent SMS to me "APH request 25k deposit for chemo, ins would not support and husbands company says no", I replied "she still needs Doctors' attention, try HUKM which is also a specialist hospital". On Friday I asked how was his sister. He replied "she has problems with her breathing" . Of course I could not comprehend whatwas happening. I told him increase dosage to 15 per day.

On Sunday, 30th October, I visited her at the HUKM. She looked bubbly and could not stop talking. She looked very thin but she was determined to survive this ordeal. The HUKM was preparing for her chemo for the next day. I left and I never stopped praying for her.

On Wed, Thurs and many times I sent SMS to azman and he never

replied. Finally I sent him an email on Nov 9th, and he replied, she had gone through 2 chemo sessions, she is very weak and doctors not allow her to return home, she hates taking medications and one experience she vomitted on taking some liquid medication for the hospital. Anyway Azman is still giving her TF through her drinks.

On 12th Nov I attended a fourm/dialog by doctors practicing TF, they told me to give her TF+. I sent an SMS to azman about the outcome of my questions, I really wanted to visit his sister, but he did not reply.

On 14th Nov I attended another product talk by a doctor at the 4Life office. Now i am convinced that he should put her on TF+. Again I sent an SMS to azman, still no reply.

On 12th Nov he wrote, she is gaining some strength and they are still giving her TF through her drinks, and i told him not to put in hot drinks but warm drink will do, would appreciate visit from other than family members. I told him to switch to TF+ but I don't know whether he has done so. I read it on 16th Nov at 4Life office, too late for me to change plans since I am going to JB early next morning. (I had not opened my email since Friday 11th because my mum's place the telephone line is noisy)

I hope to be able to visit her on my next trip to KL. My doa 4 u mimi.

SMS from Azman on 8th January 2006

She was discharged after the second chemo, Thank you to TF because her blood level has risen to normal that surprised the doctor. Now she is on Riovida.

(Dia dah keluar hospital selepas chemo ke2. TQ to TF sebab blood level dia naik macam orang normal sampai doktor terperanjat. Sekarang ni dia on Riovida)

Any drug, herb or food supplement has Responses which will be different from one patient to another. Yes TF can help increase your immune system to improve your health overcoming CML,

take TF advanced formula 6 to 12 capsules every night and TF Riovida 30ml to 60ml per day. TF has no side effects. Looking forward to your progress.

- 4life Research is the premier in transfer factor technology. Its TF adv has potensi of 200 compared to other products which has potensi of about 10 to 20 only.

If you are in the Klang valley, the 4life office is at Level 5, Amcorp Tower, Petaling Jaya, Selangor.

4Life ID : 6120219

- hi doctor. I'm a CML with a cronic phase whom taking treatment at HUKM. I hv been taking imatinib 700 mg for 7 years but my cancer cell is still there eventough my WBC. Platelets and HB is stabile. due to that the doctors hv make a test and show that my blood has mutation of T2689F (not mistaken) and they chg me to linotinib 400mg. I hv side effects due to this. hope you can assist me. can i take the transfer factor?
