## The power of these scientifically proven ingredients...

#### Resveratrol

## X'tranol 24

Resveratrol was discovered through a spark of curiosity from medical researchers regarding the "French Paradox" – a French diet containing such high levels of fat but the French experience a very low incidence of heart disease rate – an astonishing 42% lower than Americans! The investigation concluded resveratrol, a component found in the red wine they consumed daily, had a positive effect on

the health of the French population.

Resveratrol is now established as **nature's premier anti-aging miracle molecule**, and just one ounce of Genesis™ contains the amount of resveratrol equal to 10 bottles of Cabernet Sauvignon – without the alcohol! Resveratrol is active against a wide range of artery-damaging free radicals and is key to **extending the life of organic cells**. Discovering resveratrol's effect on longevity may possibly be one of the next major scientific discoveries in history.

One of the key nutrients in X'tranol-24™ is resveratrol. And, Symmetry standardizes the amount of resveratrol you get in every one-ounce serving.

#### Get all the nutrients found in red wine without the alcohol

The discovery of the "French Paradox" brought the value of drinking wine to the world's attention. Genesis™ brings you all the benefits but took away the harmful effects of the alcohol.

### Ellagic Acid (from whole fruit pomegranate)

Scientific evidence shows polyphenol, ellagic acid, is one of the most potent detoxifiers of the body's cells and a strong deterrent of serious cellular disease. As a powerful antioxidant, ellagic acid helps protect against premature

aging associated with free-radical damage, and also **protects the body against potentially dangerous food borne pathogens** such as bacterium and fungus.

One ounce of Genesis™ delivers the equivalent ellagic acid from one pomegranate. Clinical studies show that ellagic acid may be **the most effective way to prevent cancer** by inhibiting the growth of cancer cells and arresting the growth of cancer in people with a genetic predisposition for the disease. Some of the most exciting research today revolves around ellagic acid!
