➔ On Melaleuca Products Instead of Ritalin

Regina Morris wrote:

I do not have the ingredients in front of me, but one of the products that I buy, and will continue to buy, is the **ProvexPlus** and the **AussiePals** vitamins. The first is an antioxidant, the second is a childrens chewable vitamin.

I have taken the bottles and have had the ingredients checked out by my son's pediatrician, a psychologist, a psychiatrist, and by a pharmacist at People's Pharmacy. All agreed that the ingredients were not harmful to my son and that together they gave him a good daily dose of vitamins and nutrients, which helped him focus.

My son is ADHD and the psychologist recommended putting him on Ritalin. My husband and I put our son on the **Melaleuca** products instead. We noticed a difference immediately - so did his kindergarten teacher.

In January his teacher told me that my son was failing kindergarten (which I didn't even know you could do). His report card in March showed great improvement. His last report card in May showed tremendous improvement. His teacher promoted him to first grade without even an improvement plan.

I am so pleased to hear that Melaleuca is helping your son. I work in Special Education and am also a Marketing Executive for Melaleuca. It's just another affirmation that the products this company manufactures here in the U.S.A., are top notch.
