

"AMAZING RESULTS!"

Lori E Lane | MULVANE, KS

"I discovered last year at a routine doctors appointment, I have genetic high triglycerides. The doctor started me on an oral medication after discovering my trigs were 982, normal is 149 or below. I have had my blood work done every 3 months for a year and a half. The lowest we have been able to get my trigs were 328 at the cost of my good cholesterol (HDL) lowering to 27 (should be 40 or above). I started the Omega-3 Crème - Peach Mango in May after I received my shipment. At a follow-up appointment June 20th the doctor wanted to increase my medications to see if we could get better control of my trigs and raise my HDL. I asked him to repeat my blood work before we changed the medication because I had been taking a supplement for 40 days and wanted to see if it was helping. He called me the following day with a report he could hardly believe, my HDL was up to 31, cholesterol was down to 122 and my trigs were down to 98!! He wanted to know where I got this AMAZING supplement so he could refer other patients to it. I told him I was a Melaleuca representative and had ordered the supplement from there. I am looking forward to seeing the continued health benefits from the Melaleuca products. "
