Breast cancer

One study found that women with breast cancer who took GLA had a better response to tamoxifen (a drug used to treat estrogen-sensitive breast cancer) than those who took only tamoxifen. Other studies suggest that GLA inhibits tumor activity among breast cancer cells. There's some research suggesting that a diet rich in omega-6 fatty acids may promote breast cancer development. Do not add fatty acid supplements -- or any supplements -- to your breast cancer treatment regimen unless approved by your physician.

Would You Like To Know Your Fatty Acid Balance?
