A natural alternative treatment for Human Papillomavirus for women

Posted by Marguerite | May 6, 2009 .

Dr. Gordon Pederson, Ph.D recently did an amazing webinar presentation explaining the benefits of Silver Shield®, an amazing product available right on my SHOP page of my website through Nature Sunshine products. Dr. Pederson is a Ph.D in Toxicology and a best selling author. He reported that Silver is a patented product that kills bacteria, viruses and mold. With the chance of being exposed to various strains of flu viruses, MRSA, strep pneumoniae, E.coli and more this is a valuable product to have.

This product comes in two forms liquid and gel and can be used in many ways to kill viruses, mold and fungus. With all the recent reports about Human Papillomavirus and the vaccines created to prevent it one of the best things about Silver Shield® is what women have used to successfully rid HPV! I have talked to more women recently who have been exposed to this virus. Now I have good news for clients who contact me with this concern. Here is an alternative solution to the medical treatments that is simple and inexpensive with known positive results! Follow the instructions below and there is hope to rid this virus.

The two products needed are Silver Shield®, and Silver Shield® Gel. Both products together will deal with the condition internally and externally in a matter of days by killing the virus. Incidentally, they also kill bacteria and fungus. This remedy is great for yeast infections, as well as other viral infections such as herpes.

Use a douche syringe bulb, take 1/2 bottle of Silver Shield® (so you'll need to buy at least 3 bottles) and use it as a vaginal douche. Hold it for 10 minutes then release. Do this once a day for five days. At the same time, put a dime size amount of the Silver Shield® Gel on a tampon. The gel should also be used on genital warts or lesions externally.

Five days should be long enough to kill the virus, but if symptoms persist, just keep doing the douche every day and applying the gel.
