Neurocore may help with ADHD in children, teens and adults

At Neurocore Brain Performance Centers, we have helped thousands of children, teens and adults with attention deficit hyperactivity disorder (ADHD), also called attention deficit disorder (ADD).

See What We Do

In many cases the underlying causes of their ADHD symptoms may be due to anxiety, poor sleep quality, vision problems, a learning disability, or other conditions. We recognize that every person is unique, and our assessment helps identify why you or your child may be experiencing specific behaviors. Our innovative program features the best in applied neuroscience. We work with the brain's natural ability to learn, helping clients reach their full potential.

Neurocore may be covered by your insurance

Many insurance plans cover Neurocore's services. We provide a **FREE** insurance consultation prior to the time of the initial neurological assessment to inform clients if and how much will be covered. You may be able to use your **Health Savings Account (HSA)**, **Flexible Spending Account (FSA)** and **Health Reimbursement Arrangement (HRA)** for Neurocore services.

Do you or your child have ADHD?

ADHD is most often diagnosed based on these and other issues: difficulty completing tasks, trouble focusing, difficulty following a schedule, forgetfulness, easily distracted. We take an innovative approach grounded in science with results. Our comprehensive assessment goes beyond a checklist of observed behaviors. It starts by using advanced qEEG technology that precisely measures your unique brainwave activity to help identify what may cause the behaviors. Our **ADHD test** also measures level of attentiveness. After testing, our biofeedback and neurofeedback program trains your brain to self-regulate so it can perform better.

Teen ADHD

Adult ADHD

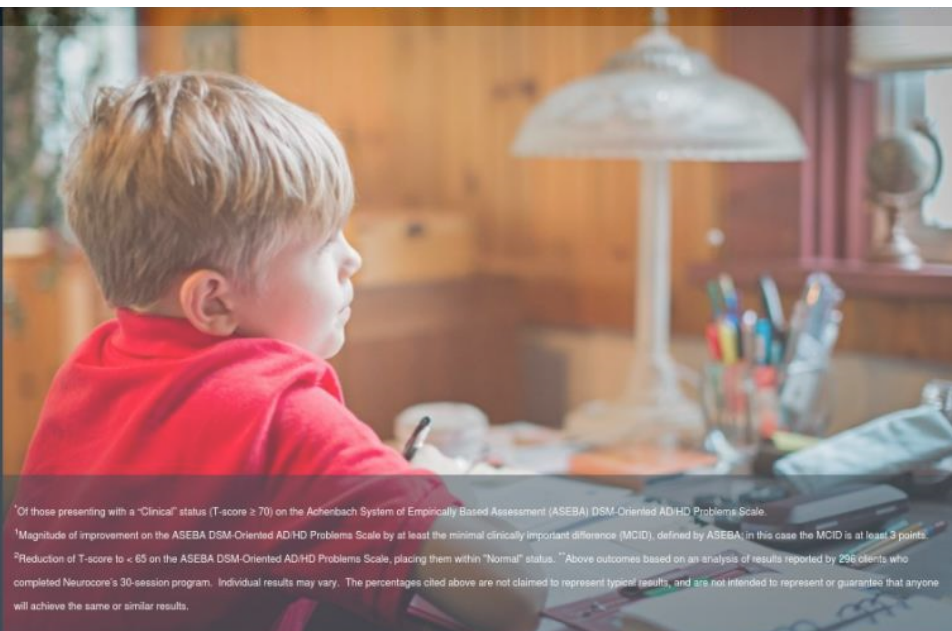

Clients Who Complete Our Program Have Reported*

85%

experienced a "clinically important" reduction of ADHD Symptoms¹

53%

no longer met symptomatic thresholds of ADHD²

¹Of those presenting with a "Clinical" status (T-score ≥ 70) on the Achenbach System of Empirically Based Assessment (ASEBA) DSM-Oriented ADHD Problems Scale.

²Magnitude of improvement on the ASEBA DSM-Oriented ADHD Problems Scale by at least the minimal clinically important difference (MCID), defined by ASEBA, in this case the MCID is at least 3 points.

³Reduction of T-score to < 65 on the ASEBA DSM-Oriented ADHD Problems Scale, placing them within "Normal" status. ⁴Above outcomes based on an analysis of results reported by 296 clients who completed Neurocore's 30-session program. Individual results may vary. The percentages cited above are not claimed to represent typical results, and are not intended to represent or guarantee that anyone will achieve the same or similar results.

Testimonials

"We have exhausted our other options, and my son was still struggling. After failing 2 sessions of summer school, and having to repeat 7th grade, we had to try something different.

He is able to multi-task now. He is getting to his homework with less prompting. I see him being more confident in doing his homework without help. Last year, we had a tutor for at least one hour every school day. This year only 2 hours per week. We have less combativeness in general."

Anonymous (Son in the 7th grade)

Grandville Center, December 2017

The views expressed above are the personal views of the reviewer and are based on the reviewer's experience with the completion of Neurocore's 30-session program. Results will vary. Consumers should not expect to experience the same results.
