The views expressed below are the personal views of the reviewer and are based on the reviewer's experience with the completion of Neurocore's 30-session program. Results will vary. Consumers should not expect to experience the same results.

"My daughter was having issues with focusing and unexplained emotional breakdowns that was affecting her school and personal life.

My daughter is doing much better at school. Starting the program she was far behind where she was supposed to be for reading. Since starting Neurocore she has been slowly catching up to where she is supposed to be. Prior to Neurocore her mother and I were having a lot of difficulty getting her to work on homework with us. Though she still does not like it she is able to get through it; which did not always occur before.

Also, prior to Neurocore my daughter was having issues with emotional breakdowns. During these times she was almost unresponsive from minutes to an hour. She just wanted to cry. Basically, something would not go the way she wanted and she would breakdown. It was bad enough that when you asked her what was wrong she would say, "I don't know". Though these episodes are not gone, they are dramatically improved."

West Bloomfield Center, December 2017

"We came to Neurocore to help our daughter with ADHD symptoms because we did not want her to take medication.

Our life and hers feel calmer and more controlled. It is a real commitment but worth the time you'll spend here. We have seen a significant reduction in our daughters symptoms. She's proud of herself and her accomplishment of completing this program.

Everyone here is professional and helpful. So glad this program was available to help my daughter."

Laura G.

Sterling Heights Center, November 2017

"My life has been different because now I don't have to constantly remind him of things to do, and the melt downs and tantrums has stopped.

The program works it takes a little time, but if you hang in there you will see result."

Carmella W.

West Bloomfield Center, November 2017

"Josh was very hyper and had to always be moving. He was also highly impulsive and made poor choices without thinking of the consequences. He's also had a very difficult time slowing down and falling asleep at night.

He has slowed down quite a bit and is more thoughtful about his choices. He does still experience impulsiveness, but on a smaller scale."

Jennifer E.

"It was to help our child focus and be able to deal with hyperactivity.

Our child's focus is now great and the hyper activity is no longer an issue. Outstanding service provider and would highly recommend to others."

"My son Joey has ADHD, lacked focus, and was extremely impulsive before starting treatment here. He wasn't interested in school, extra curricular activities, or having many friends. He really struggled in school and at home with focusing and behavior to the point where we just didn't know what to do.....we had tried just about everything you could think of!

Omg, he is a totally different child with the personality we knew he had but just couldn't use fully. He is actually interested in reading, does his homework without struggling/arguing, is playing more with kiddos and making lots more friends! His focus is lots sharper and thinks more before doing. This program has changed his life in a great way.

Don't hesitate to get your child into this program if they have ADHD, have a hard time focusing, or have troubles being impulsive. You will not regret it and it is totally worth the money. Best thing you could possibly do for your child who struggles daily with ADHD."

Shantae W.

Grandville Center, September 2017

"We came to Neurocore for my daughters ADHD and difficulty focusing. After Neurocore, we saw improvement with her focus and with her ADHD symptoms! We would definitely recommend Neurocore!!!

Ava can focus better and is more attentive!"

Sarah W.

Grand Rapids Center, September 2017

"We had focus and anxiety issues at home and at school. It was frustrating to all of us and effecting school.

He is better at focusing for longer and knows how to pull himself back in better when he starts to drift and day dream. We use the techniques he has learned together as a whole family."

Jessica S.

Grand Rapids Center, August 2017

"ADHD was the primary concern we were dealing with, but anxiety & depression concerns were starting to be evident. One parent was extremely concerned about side effects of medication, and the other didn't want to be stuck with a lifelong medication dependence. We had seen TedTalks about brain scans and Neurofeedback and were excited by the potential.

We have a lot more hope for the future. We are seeing a significant improvement at home and are looking forward to stronger academic outcomes this upcoming school year. The atmosphere at home is calmer. My son is better able to control himself... We are confident that we have made the best possible choice for my son in choosing Neurocore..."

"Skyler is a very bright (Gifted) child who was not reaching his full potential due too ASD and most significantly ADHD. Because he is high functioning/gifted but at the same time severely ADHD, he was often misunderstood (which in turn led to him being mistreated and also confusion about proper placement and appropriate strategies to help him succeed in school). Plain and simple...nobody really knew what to do with him. Skyler suffered a lot of emotional distress over being bullied and mistreated for things that he simply could not control.

There are no words to explain how life changing this was for us! The changes I am seeing at home are significant. Skyler would rarely sit in a seat for any length of time and would run repeatedly from one side of a room to another (almost like he was on some does of amphetamines). He no longer does that and has no problem to chill out and relax in a chair or on the couch! Now that school has begun, (with a new school, a fresh start)...I am getting such wonderful feedback from his teacher about his efforts and ability to focus!

I'm sure it goes without saying, but I'll say it anyway...my own personal stress has subsided due to the fact that I feel a peace and joy in my heart to see the changes in my son that I know are helping his overall wellness!

Ask questions! Communicate your concerns with the staff! They really do care and will go through every effort to meet your needs!"

Savannah V.

Boca Raton Center, August 2017

"We seemed to have literally seen changes after the first treatment. Not sure if that is possible, but it sure seemed that way, even the school noticed and commented about how calm and focused he was lately. His teacher said it was the best week he had EVER had!

We got our very first compliment out in public ever about his behavior which was really cool. Vital to keep it positive. Jimmy comes to help him draw his great pictures, even better! To expand and increase his focus and reading skills that are already over grade level....etc. Never because he is too wild or bad or whatever negative approach."
