## Neurocore may help with the symptoms of Depression through our drug-free program

At Neurocore Brain Performance Centers, people come to us with many types of depression and varying levels of severity. Many are chronic and debilitating. Some are caused by a traumatic event, while others just seem to get a little worse every day. Whatever type, depression is a condition that can have a devastating impact on you and your family.

### See What We Do

Our comprehensive assessment uses qEEG brainwave mapping technology as well as clinically validated symptom rating scales and other diagnostic measures to help create a more complete picture of your depression symptoms.

Based on your brain map and diagnostic results, we create a customized program to help address your symptoms.

## Depression is more than just sadness

Symptoms are wide-ranging and typically include:

- Social isolation
- Anxiety
- Low motivation
- Low energy levels
- Low self-esteem
- Lack of interest in activities – even the ones you used to love

How Neurocore's depression  
treatment works

## How Neurocore's depression treatment works

We start with a neuro assessment to understand how your brain is working. Using advanced qEEG technology, we measure and evaluate your brain's electrical activity to identify the cause of your depression symptoms. Whether you're just getting by day to day or you've shut down from being overwhelmed with stress, we will guide you through a customized **neurofeedback program** to train your brain to function better.

## DEPRESSION: Signs, Symptoms, and Neurofeedback as a drug-free treatment

Clients Who Complete Our Program Have Reported\*

**84%**

experienced a "clinically important" reduction of Depressive symptoms<sup>1</sup>

**51%**

no longer met symptomatic thresholds for Depression.<sup>2</sup>

\*Of those presenting with a "Clinical" status (T-score  $\geq 70$ ) on the Achenbach System of Empirically Based Assessment (ASEBA) DSM-Oriented Depressive Problems Scale.

<sup>1</sup>Magnitude of improvement on the ASEBA DSM-Oriented Depressive Problems Scale by  $\geq 11$  (at least the minimal clinically important difference (MCID), defined by ASEBA). In this case the MCID is at least 3 points.

<sup>2</sup>Reduction of T-score to  $\leq 65$  on the ASEBA DSM-Oriented Depressive Problems Scale, placing them within "Normal" status. <sup>3</sup>Above outcomes based on an analysis of results reported by 292 clients who completed Neurocore's 30-session program. Individual results may vary. The percentages cited above are not claimed to represent typical results, and are not intended to represent or guarantee that anyone will achieve the same or similar results.

## Testimonials

"I came to Neurocare as a birthday present to myself. I was suffering with depression issues and wanted to change without taking medication. Through the program I learned the importance of meditation. I am so happy that my depression is almost completely gone. I find I have better focus and my memory issues have improved.

All the technicians and clinicians made this a wonderful journey. All are very professional, encouraging and caring."
