

Christine Bray  
OVARIAN CANCER

*"After the chemotherapy and then radiation, my care team was frustrated that they still saw some evidence of disease. So based upon genomic testing of my tumor, my doctor recommended a specific drug which he explained some studies indicated would target my cancer's specific genetic mutation. I felt good knowing that the choice of drug for me was informed by the DNA of my tumor."*

*No case is typical. You should not expect to experience these results.*
