

within two days and I was looking forward to getting it done,” Troy says.

The Solution

Fifteen family members, pastors, and friends came to support Troy and anxiously camped out in the waiting room. Once Troy was under anesthesia, UPMC neurosurgeon [Mark Richardson, MD, PhD](#) and his team performed a craniotomy, a surgery in which a portion of the skull is temporarily opened, and removed the entire fist-sized tumor. The complex surgery took more than 11 hours, because the tumor was wrapped around one of the largest arteries in the brain, the middle cerebral artery.

“It was two or three in the morning when the doctors came to see us. Dr. Richardson told us that the surgery couldn’t have gone better,” says Heidi. “When we thanked him, he said he does this work for moments like these.”

Troy stayed in the hospital for a week after surgery. During Troy’s hospital stay, Heidi and one of their nephews were grabbing a coffee when Dr. Richardson spotted them.

“He was in scrubs after another long surgery but he took the time to sit down, have a coffee with us, and check in. He was so down-to-earth and humble. That stuck with us,” Heidi says.

The Results

Troy continued his recovery at home and had regular home care each week with a nurse, physical therapist, and occupational therapist. He also took steroids and underwent chemotherapy and radiation to continue to fight the cancer. A year later, his CT scans were clean and he is off the powerful steroids.

While Troy has good days and bad days, he never lost his positive attitude, perseverance, or faith. Heidi says most people don’t even realize he has brain cancer or had such a major surgery.

“One of my close friends passed away from the same type of cancer about a year before I was diagnosed,” says Troy. “So, each day is a gift and by the grace of God, I am here, recovering, working, and very happy with my progress. I could not have had better professional care than what I and my whole family received from the team of doctors, nurses, and other caregivers.”

“Dr. Richardson and his whole team were so attentive, caring, and helpful. They really exceeded our expectations,” he adds. “UPMC didn’t just save my life, they gave me a life I can make the most of. It is a struggle but every day I have the opportunity to choose to make the most of it.”

Our patient stories profile a number of patients who have had brain surgery at UPMC. Although everyone's care experience is unique, we hope that sharing these stories will help other prospective patients and their families better understand these procedures and their potential benefits.

Troy's treatment and results may not be representative of all similar cases.

For help in finding a doctor or health service that suits your needs, call the UPMC Referral Service at 412-647-UPMC (8762) or 1-800-533-UPMC (8762). Select option 1.

UPMC is an equal opportunity employer. UPMC policy prohibits discrimination or harassment on the basis of race, color, religion, ancestry, national origin, age, sex, genetics, sexual orientation, gender identity, marital status, familial status, disability, veteran status, or any other legally protected group status. Further, UPMC will continue to support and promote equal employment opportunity, human dignity, and racial, ethnic, and cultural diversity.
