United States District Court
Southern District of New York

1:20-cv-01409

Akash Budhani, individually and on behalf
of all others similarly situated,

Plaintiff,

- against -

Monster Beverage Company,

Defendant

Class Action Complaint

Plaintiff by attorneys alleges upon information and belief, except for allegations pertaining to plaintiff, which are based on personal knowledge:

1. Monster Beverage Company (“defendant”) manufactures, distributes, markets, labels and sells espresso energy drinks blended with European milk and purporting to be flavored with vanilla under their Monster brand (“Products”).

2. The Products are available to consumers from retail and online stores of third-parties and defendant's website and Amazon.com and are sold in cans of 8.4 OZ.

3. The relevant front representations include “Vanilla Cream,” “Triple Shot,” and an image of the vanilla flower.

4. The Product's opposite panel contains the Nutrition Facts and ingredient list.

5. The unqualified, prominent and conspicuous representation as “Vanilla Cream” is

false, deceptive and misleading because the Product contains non-vanilla flavors which imitate and extend vanilla but are not derived from the vanilla bean, yet these flavors are not disclosed to consumers as required and expected.

I. Vanilla is Constantly Subject to Efforts at Imitation Due to High Demand

6. The tropical orchid of the genus *Vanilla* (*V. planifolia*) is the source of the prized flavor commonly known as vanilla, defined by law as “the total sapid and odorous principles extractable from one-unit weight of vanilla beans.”¹

7. Vanilla’s “desirable flavor attributes...make it one of the most common ingredients used in the global marketplace, whether as a primary flavor, as a component of another flavor, or for its desirable aroma qualities.”²

8. Though the Pure Food and Drugs Act of 1906 (“Pure Food Act”) was enacted to “protect consumer health and prevent commercial fraud,” this was but one episode in the perpetual struggle against those who have sought profit through sale of imitation and lower quality commodities, dressed up as the genuine articles.³

9. It was evident that protecting consumers from fraudulent vanilla would be challenging, as E. M. Chace, Assistant Chief of the Foods Division of the U.S. Department of Agriculture’s Bureau of Chemistry, noted “There is at least three times as much vanilla consumed [in the United States] as all other flavors together.”⁴

10. This demand could not be met by natural sources of vanilla, leading manufacturers

¹ 21 C.F.R. §169.3(c).

² Daphna Havkin-Frenkel, F.C. Bellanger, Eds., Handbook of Vanilla Science and Technology, Wiley, 2018.

³ Berenstein, 412; some of the earliest recorded examples of food fraud include unscrupulous Roman merchants who sweetened wine with lead.

⁴ E. M. Chace, “The Manufacture of Flavoring Extracts,” Yearbook of the United States Department of Agriculture 1908 (Washington, DC: Government Printing Office, 1909) pp.333–42, 333 quoted in [Nadia Berenstein, "Making a global sensation: Vanilla flavor, synthetic chemistry, and the meanings of purity," History of Science 54.4 \(2016\): 399-424 at 399.](#)

to devise clever, deceptive and dangerous methods to imitate vanilla’s flavor and appearance.

11. Today, headlines tell a story of a resurgent global threat of “food fraud” – from olive oil made from cottonseeds to the horsemeat scandal in the European Union.⁵

12. Though “food fraud” has no agreed-upon definition, its typologies encompass an ever-expanding, often overlapping range of techniques with one common goal: giving consumers less than what they bargained for.

A. Food Fraud as Applied to Vanilla

13. Vanilla is considered a “high-risk [for food fraud] product because of the multiple market impact factors such as natural disasters in the source regions, unstable production, wide variability of quality and value of vanilla flavorings,” second only to saffron in price.⁶

14. The efforts at imitating vanilla offers a lens to the types of food fraud regularly employed across the spectrum of valuable commodities in today’s interconnected world.⁷

<u>Type of Food Fraud</u>	<u>Application to Vanilla</u>
<p>➤ Addition of markers specifically tested for instead of natural component of vanilla beans</p>	<ul style="list-style-type: none"> • Manipulation of the carbon isotope ratios to produce synthetic vanillin with similar carbon isotope composition to natural vanilla
<p>➤ Appearance of <i>more</i> and/or higher quality of</p>	<ul style="list-style-type: none"> • Ground vanilla beans and/or seeds to provide visual appeal as “specks” so consumer thinks the product contains real

- the valued ingredient
- vanilla beans, when the ground beans have been exhausted of flavor
- Caramel to darken the color of an imitation vanilla so it more closely resembles the hue of real vanilla⁸
 - Annatto and turmeric extracts in dairy products purporting to be flavored with vanilla, which causes the color to better resemble the hue of rich, yellow butter
- Substitution and replacement of a high quality ingredient with alternate ingredient of lower quality
- Tonka beans, though similar in appearance to vanilla beans, are banned from entry to the United States due to fraudulent use
 - Coumarin, a toxic phytochemical found in Tonka beans, added to imitation vanillas to increase vanilla flavor perception
- Addition of less expensive substitute ingredient to mimic flavor of more valuable component
- Synthetically produced ethyl vanillin, from recycled paper, tree bark or coal tar, to imitate taste of real vanilla
 - “to mix flavor materials together at a special ratio in which they [sic] compliment each other to give the desirable aroma and taste”⁹
- Compounding, Diluting, Extending
- Combination with flavoring substances such as propenyl guaethol (“Vanitrope”), a “flavoring agent [, also] unconnected to vanilla beans or vanillin, but unmistakably producing the sensation of vanilla”¹⁰

⁸ Renée Johnson, “[Food fraud and economically motivated adulteration of food and food ingredients.](#)” Congressional Research Service R43358, January 10, 2014.

⁹ Chee-Teck Tan, “[Physical Chemistry in Flavor Products Preparation: An Overview](#)” in Flavor Technology, ACS Symposium Series, Vol. 610 1995. 1-17.

¹⁰ Berenstein, 423.

- Addition of fillers to give the impression there is more of the product than there actually is
 - “Spiking” or “fortification” of vanilla through addition of natural and artificial flavors including vanillin, which simulates vanilla taste but obtained from tree bark
 - Injection of vanilla beans with mercury, a poisonous substance, to raise the weight of vanilla beans, alleged in *International Flavors and Fragrances (IFF), Inc. v. Day Pitney LLP and Robert G. Rose*, 2005, Docket Number L-4486-09, Superior Court of New Jersey, Middlesex County
 - Subtle, yet deliberate misidentification and obfuscation of a product’s components and qualities as they appear on the ingredient list
 - “ground vanilla beans” gives impression it describes unexhausted vanilla beans when actually it is devoid of flavor and used for aesthetics
 - “natural vanilla flavorings” – “-ing” as suffix referring to something *like* that which is described
 - “Vanilla With Other Natural Flavors” – implying – wrongly – such a product has a sufficient amount of vanilla to characterize the food
 - “Natural Flavors” – containing “natural vanillin” derived not from vanilla beans but from tree pulp. When paired with real vanilla, vanillin is required to be declared as an artificial flavor
 - “Non-Characterizing” flavors which are not identical to vanilla, but that extend vanilla
- Ingredient List Deception¹¹

15. The “plasticity of legal reasoning” with respect to food fraud epitomize what H.

¹¹ Recent example of this would be “evaporated cane juice” as a more healthful sounding term to consumers to identify sugar.

Mansfield Robinson and Cecil H. Cribb noted in 1895 in the context of Victorian England:

the most striking feature of the latter-day sophisticator of foods is his knowledge of the law and his skill in evading it. If a legal limit on strength or quality be fixed for any substance (as in the case of spirits), he carefully brings his goods right down to it, and perhaps just so little below that no magistrate would convict him.

The law and chemistry of food and drugs. London: F.J. Rebman at p. 320.¹²

B. The Use of Vanillin to Simulate Vanilla

16. The most persistent challenger to the authenticity of real vanilla has been synthetic versions of its main flavor component, vanillin.

17. First synthesized from non-vanilla sources by German chemists in the mid-1800s, vanillin was the equivalent of steroids for vanilla flavor.

18. According to Skip Roskam, a professor of vanilla at Penn State University and former head of the David Michael flavor house in Philadelphia, “one ounce of vanillin is equal to a full gallon of single-fold vanilla extract.”¹³

19. Today, only 1-2% of vanillin in commercial use is vanillin obtained from the vanilla plant, which means that almost all vanillin has no connection to the vanilla bean.

20. Nevertheless, disclosure of this powerful ingredient has always been required where a product purports to be flavored with vanilla. See [Kansas State Board of Health, Bulletin, Vol. 7, 1911](#), p. 168 (cautioning consumers that flavor combinations such as “vanilla and vanillin...vanilla flavor compound,” etc., are not “vanilla [extract] no matter what claims, explanations or formulas are given on the label.”).

21. Since vanilla is the only flavor with its own standard of identity, its labeling is

¹² Cited in Sébastien Rioux, “[Capitalist food production and the rise of legal adulteration: Regulating food standards in 19th-century Britain](#),” *Journal of Agrarian Change* 19.1 (2019) at p. 65 (64-81).

¹³ Katy Severson, [Imitation vs. Real Vanilla: Scientists Explain How Baking Affects Flavor](#), *Huffington Post*, May 21, 2019.

controlled not by the general flavor regulations but by the standards for vanilla ingredients.

22. This means that if a product is represented as being characterized by vanilla yet contains non-vanilla vanillin, the label and packaging must declare vanillin an artificial flavor. *See* Vanilla-vanillin extract at 21 C.F.R. § 169.180(b) (“The specified name of the food is ‘Vanilla-vanillin extract _-fold’ or ‘_-fold vanilla-vanillin extract’, followed immediately by the statement ‘contains vanillin, an artificial flavor (or flavoring)’.”); *see also* 21 C.F.R. § 169.181(b), § 169.182(b) (Vanilla-vanillin flavoring and Vanilla-vanillin powder).

23. This prevents consumers from being misled by products which may taste similar to real vanilla and but for consumer protection requirements, would be sold at the price of real vanilla.

C. Production of “Natural Vanillins” Combined with “Natural Vanilla”

24. The past ten years have seen many vanillins purporting to be a “natural flavor” – derived from a natural source material which undergoes a natural production process.

25. However, “natural vanillin” is not a “natural vanilla flavor” because the raw material is not vanilla beans but ferulic acid and eugenol.

26. Ferulic acid can be converted to vanillin through a natural fermentation process which is cost prohibitive for almost all applications.

27. Vanillin from eugenol is easier to produce in a way claimed to be a “natural process.”

28. However, because this process occurs without transparency or verification in China, regulators and consumers are not told the production method is more properly described as that of an artificial flavor, involving a chain of chemical reactions.

II. Flavor Industry’s Efforts to Use Less Vanilla, Regardless of any Shortages

29. The “flavor industry” refers to the largest “flavor houses” such as Symrise AG, Firmenich, Givaudan, International Flavors and Fragrances (including David Michael), Frutarom

and Takasago International along with the largest food manufacturing companies such as Unilever.

30. The recent global shortage of vanilla beans has provided the flavor industry another opportunity to “innovate[ing] natural vanilla solutions...to protect our existing customers.”¹⁴

31. Their “customers” do not include the impoverished vanilla farmers nor consumers, who are sold products labeled as “vanilla” for the same or higher prices than when those products contained *only* vanilla.

32. These efforts include (1) market disruption and manipulation and (2) the development of alternatives to vanilla which completely or partially replace vanilla.

A. Flavor Industry’s Attempt to Disrupt Supply of Vanilla to Create a “Permanent Shortage”

33. The flavor industry has developed schemes such as the “Sustainable Vanilla Initiative” and “Rainforest Alliance Certified,” to supposedly assure a significant supply of vanilla at stable, reasonable prices.

34. Contrary to their intention, these programs make vanilla less “sustainable” by paying farmers to destroy their vanilla and harvest palm oil under the pretense of “crop diversification.”

35. There have also been allegations that these programs use child and/or slave labor.

36. Other tactics alleged to be utilized by these companies include “phantom bidding,” where saboteurs claim they will pay a higher price to small producers, only to leave the farmers in the lurch, forced to sell at bottom dollar to remaining bidders.¹⁵

37. The reasons for these counterintuitive actions is because they benefit from high vanilla prices and the use of less real vanilla.

38. When less vanilla is available, companies must purchase the higher margin,

¹⁴ Amanda Del Buono, [Ingredient Spotlight](#), Beverage Industry, Oct. 3, 2016.

¹⁵ Monte Reel, [The Volatile Economics of Natural Vanilla in Madagascar](#), Bloomberg.com, Dec. 16, 2019.

proprietary, “vanilla-like” flavorings made with advanced technology and synthetic biology.

B. Use of Vanilla WONF Ingredients to Replace and Provide Less Vanilla

39. Though flavor companies will not admit their desire to move off real vanilla, this conclusion is consistent with the comments of industry executives.

40. According to Suzanne Johnson, vice president or research at a North Carolina laboratory, “Many companies are trying to switch to natural vanilla with other natural flavors [WONF] in order to keep a high-quality taste at a lower price,” known as “Vanilla WONF.”

41. The head of “taste solutions” at Irish conglomerate Kerry urged flavor manufacturers to “[G]et creative” and “build a compounded vanilla flavor with other natural flavors.”

42. A compounded vanilla flavor “that matches the taste of pure vanilla natural extracts” can supposedly “provide the same vanilla taste expectation while requiring a smaller quantity of vanilla beans. The result is a greater consistency in pricing, availability and quality.”¹⁶

43. These compounded flavors exist in a “black box” with “as many as 100 or more flavor ingredients,” including potentiators and enhancers, like maltol and piperonal, blended together to enhance the vanilla, allowing the use of less vanilla to achieve the intended taste.¹⁷

44. The effort to replace vanilla with so-called Vanilla WONF started in the late 1960s, but the last 10 years have seen the proliferation of this ingredient.

C. Decline of Industry Self-Governance

45. That high level executives in the flavor industry are willing to boast of their

¹⁶ Donna Berry, [Understanding the limitations of natural flavors](#), BakingBusiness.com, Jan. 16, 2018.

¹⁷ Hallagan and Drake, FEMA GRAS and U.S. Regulatory Authority: U.S. Flavor and Food Labeling Implications, Perfumer & Flavorist, Oct. 25, 2018; Charles Zapsalis et al., *Food chemistry and nutritional biochemistry*. Wiley, 1985, p. 611 (describing the flavor industry’s goal to develop vanilla compound flavors “That *Seem[s]* to be Authentic or at Least Derived from a Natural Source”) (emphasis added).

stratagems to give consumers less vanilla for the same or greater price is not unexpected.

46. The once powerful and respected trade group, The Flavor and Extract Manufacturers Association (“FEMA”), abandoned its “self-policing” of misleading vanilla labeling claims and disbanding its Vanilla Committee.

47. FEMA previously opposed industry efforts to deceive consumers, but cast the public to the curb in pursuit of membership dues from its largest members, such as Unilever.

III. Designating Flavors and Ingredients in Products Represented as “Vanilla”

A. Front Label Designation of Flavors

48. Where a food makes any representations as to its primary flavor, it must be designated in a way which is truthful and not misleading based on various factors.

49. These include (1) the presence of “natural flavor” and/or “artificial flavor,” (2) whether the natural and artificial flavor simulates, resembles or reinforces the characterizing flavor, (3) whether the natural flavor is obtained from the food ingredient represented as the characterizing flavor – i.e., does the peach flavor come from real peaches or is it synthesized from apricots? and (4) the relative amounts of the different flavor types. *See* 21 C.F.R. § 101.22(i)(1)(i)-(iii), 21 C.F.R. § 101.22(i)(2).

50. “Natural flavor” refers to “the essential oil, oleoresin, essence or extractive...which contains the flavoring constituents” from a natural source such as plant material and can refer to combinations of natural flavors. *See* 21 C.F.R. § 101.22(a)(3).

51. “Artificial flavor” is any substance whose function is to impart flavor that is not derived from a natural source. *See* 21 C.F.R. § 101.22(a)(1).

52. A product labeled “Vanilla _____” gives the impression that all the flavor (taste sensation and ingredient imparting same) in the product is contributed by the characterizing food

ingredient of vanilla beans. *See* 21 C.F.R. § 101.22(i)(1) (describing a food which contains no simulating artificial flavor and not subject to 21 C.F.R. § 101.22(i)(1)(i)-(iii)).

53. The absence of the term “flavored” where a food is labeled “Vanilla” gives consumers the impression the food contains a sufficient vanilla to characterize the food.

54. If a product contains an “amount of characterizing ingredient [vanilla] insufficient to independently characterize the food,” it would be required to be labeled as “Vanilla flavored _____” or “natural vanilla flavored _____.” *See* 21 C.F.R. § 101.22(i)(1)(i).

55. Where a product contains a “characterizing flavor from the product whose flavor is simulated and other natural flavor which simulates, resembles or reinforces the characterizing flavor,” the front label would be required to state “with other natural flavor.” *See* 21 C.F.R. § 101.22(i)(1)(iii) (“the food shall be labeled in accordance with the introductory text and paragraph (i)(1)(i) of this section and the name of the food shall be immediately followed by the words “with other natural flavor””).

56. If the amount of the characterizing flavor is sufficient to independently characterize the food, the front label would state “[Name of Characterizing Flavor] With Other Natural Flavor.” *See* 21 C.F.R. § 101.22(i)(1)(iii); *see also* 21 C.F.R. § 101.22(i)(1) (“introductory text” describing scenario where food contains “no artificial flavor which simulates, resembles or reinforces the characterizing flavor,” and none of the sub-paragraphs of 21 C.F.R. § 101.22(i)(1) apply).

57. If the amount of the characterizing flavor is insufficient to independently characterize the food, the front label would be required to state “[Name of Characterizing Flavor] Flavored With Other Natural Flavor.” *See* 21 C.F.R. § 101.22(i)(1)(iii) referring to “paragraph (i)(1)(i) of this section,” 21 C.F.R. § 101.22(i)(1)(i).

B. Listing Vanilla or Vanilla Combination on Ingredient List

58. Where an exclusively vanilla ingredient is used in a product, it is listed on the ingredient list by its common or usual name provided by its standard of identity. *See* 21 C.F.R. § 169.175(b)(1) (“The specified name of the food is ‘Vanilla extract’ or ‘Extract of vanilla.’”); *see also* 21 C.F.R. § 169.177(b) (“The specified name of the food is ‘Vanilla flavoring.’”).

59. Where vanilla is part of a flavor added to a food, it is labeled “natural flavor.”

60. Where a product’s front label indicates an unqualified “Vanilla,” but the ingredient list contains a single flavoring ingredient of “Natural Flavor,” it likely means that vanilla is part of this ingredient. *See* 21 C.F.R. § 101.22(h)(1) (“Spice, natural flavor, and artificial flavor may be declared as ‘spice’, ‘natural flavor’, or ‘artificial flavor’, or any combination thereof, as the case may be.”).

IV. Types of Vanilla Flavoring Combinations

61. When vanilla is used in a product only represented as vanilla – as opposed to a mixture of vanilla and strawberry flavors – Three types of vanilla flavor combinations are mainly used in products labeled as vanilla.

62. Vanilla combination flavorings vary based on the food’s other ingredients and the intended taste of the product.

63. Though the composition of these flavorings is never disclosed, independent testing of flavor samples reveals commonalities such as “natural vanillin,” adjuvants and additives.

A. Misleading to use Vanilla WONF and Designate the Food “Vanilla”

64. Where the ingredient used is identified to the manufacturer (but not the consumer) as “vanilla with other natural flavors,” it is required to be designated on the ingredient list as “natural flavor.”

65. Where a product is only labeled as “vanilla” but made with vanilla WONF, it is

misleading for several reasons.

66. First, use of a vanilla WONF triggers the requirement to inform consumers that the flavoring is not only from the named flavor (vanilla beans) but also from “other natural flavors” that “simulate[s], resemble[s] or reinforce[s] the characterizing flavor” of vanilla. *See* 21 C.F.R. § 101.22(i)(1)(iii).

67. Second, because the standardized vanilla ingredients – vanilla extract and vanilla flavoring “are expensive” and should be distinguished “from other similar products the general principles of 21 CFR 102.5 should apply.” Exhibit A, Letter from FDA to Ernie Molina, Warner-Jenkinson Company of California, January 17, 1980.

68. If the vanilla WONF consisted of half vanilla and half non-vanilla natural flavors, the product name should state “contains 50% vanilla extract and 50% non-vanilla flavors.” Exhibit A; 21 C.F.R. § 102.5(b) (requiring disclosure of the “percentage(s) of any characterizing ingredient(s) or component(s) [as part of the product name] when the proportion of such ingredient(s) or component(s) in the food has a material bearing on price or consumer acceptance or when the labeling or the appearance of the food may otherwise create an erroneous impression that such ingredient(s) or component(s) is present in an amount greater than is actually the case.”)

69. Third, where a vanilla WONF contains “natural vanillin” as part of the “other natural flavors,” the product’s front label would be required to disclose it is naturally and artificially flavored.

70. This is because vanillin has always been considered artificial when used with real vanilla. *See* Vanilla-vanillin extract at 21 C.F.R. § 169.180(b) (“The specified name of the food is ‘Vanilla-vanillin extract _-fold’ or ‘_-fold vanilla-vanillin extract’, followed immediately by the statement ‘contains vanillin, an artificial flavor (or flavoring)’.”).

B. Misleading to Describe Non-Vanilla Flavors as “Non-Characterizing” or “Masking”

71. Some companies include supposedly “non-characterizing” flavors with vanilla to justify not disclosing anything other than vanilla on a product’s front label.

72. According to this interpretation, the “other natural flavors” do not “simulate[s], resemble[s] or reinforce[s] the characterizing flavor” of vanilla, obviating the requirement to disclose their use on the front label.

73. The most deceptive implementation of this interpretation was the development of the *Vanguard* flavoring “system” in the late 1970s by David Michael & Co., Inc., currently part of International Flavors & Fragrances (“IFF”).

74. Described as a “blend[s] of dozens of plant extractives, roots, and botanicals, all natural ingredients found on the GRAS list,” this “flavorless” “natural flavor enhancer” “contain[ed] no vanilla, vanillin, ethyl vanillin, or any artificial flavor” but reduced the amount of real vanilla by up to half.

75. David Michael advised users of *Vanguard* the front label only had to declare “vanilla” while the ingredient list would state “vanilla extract [or flavor], natural flavor.”

76. Companies know consumers value and will pay more for a product which contains high value ingredients they are familiar with, such as vanilla extract or vanilla flavoring.

77. The ubiquity of “natural flavor” – in almost every food and beverage available – is synonymous with a laboratory-created, mass produced, low value ingredient.

78. It is deceptive and misleading to avoid declaring non-vanilla flavors on a product’s front label merely because they do not simulate, or are not chemically identical to, the characterizing flavor.

79. Use of this narrow criteria fails to recognize that the added flavors may resemble,

reinforce and extend the characterizing vanilla flavor.

80. Though a non-vanilla natural flavor may not taste like vanilla, it allows the product to use less vanilla and achieve the same sensory effect.

81. These non-vanilla natural flavors include include piperonal, maltol and heliotropin, which potentiate, enhance and extend vanilla but do not taste identical to it.

82. The marketing materials for this type of ingredient system describes them aptly as “vanilla replacers.”

83. In other situations, the non-vanilla natural flavors combined with vanilla may be deceptively described as (1) a “masking flavor” which blocks or limits a negative taste sensation caused by other ingredients or (2) “rounding out” harsher notes and ancillary off-flavors.

84. Masking flavors are claimed to work “in the background with the characterizing notes, elevating them to their true potential” and “subdu[ing] off flavors from other ingredients...allowing the characterizing flavor to shine.”¹⁸

85. However, a non-vanilla “masking” flavor creates the impression the food contains more vanilla, requiring disclosure on the front label. *See* 21 C.F.R. § 101.22(i)(1)(iii) (“other natural flavor which simulates, resembles or reinforces the characterizing flavor”).

V. Product Contains Non-Vanilla Flavor and Components Which Enhance, Resemble, Simulate and Extend Vanilla

86. The Product is required to be labeled consistent with the flavor regulations in 21 C.F.R. §101.22.

87. The front label statements and/or images of “Vanilla” are understood by consumers to identify a product where (1) vanilla is the characterizing flavor, (2) vanilla is contained in a

¹⁸ Donna Berry, [Modifying Flavor in Dairy Foods](#), April 11, 2018, Food Business News.

sufficient amount to flavor the product, (3) the flavor is provided by an exclusively vanilla ingredient, (4) no other flavors simulate, resemble, reinforce, enhance or extend the flavoring from vanilla such that less real vanilla is needed and (5) vanilla is the exclusive source of flavor.

A. Ingredient List Declaration of “Natural Flavor” Reveals Flavor is Not Exclusively Vanilla

88. The unqualified, prominent and conspicuous representation as “Vanilla” is false, deceptive and misleading because the Product contains flavoring other than vanilla, indicated by "Natural Flavors" on the ingredient list.

Ingredient List

INGREDIENTS: BREWED IMPORTED ESPRESSO COFFEE (WATER, COFFEE), SKIM MILK, SUGAR, CREAM, GLUCOSE, **NATURAL FLAVORS**, TAURINE, NIACINAMIDE (VIT. B3), PYRIDOXINE HYDROCHLORIDE (VIT. B6).

89. The Product’s front label flavor designation of “Vanilla” fails to disclose the presence of these non-vanilla flavorings, which is deceptive to consumers.

VI. Conclusion

90. Defendant’s branding and packaging of the Products are designed to – and does – deceive, mislead, and defraud consumers.

91. Defendant has sold more of the Products and at higher prices per unit than it would have in the absence of this misconduct, resulting in additional profits at the expense of consumers.

92. The amount and proportion of the characterizing component, vanilla, has a material bearing on price or consumer acceptance of the Products because consumers are willing to pay more for such Products.

93. The value of the Product that plaintiff purchased and consumed was materially less than its value as represented by defendant.

94. Had plaintiff and class members known the truth, they would not have bought the Products or would have paid less for it.

95. The Product contains other representations which are misleading and deceptive.

96. As a result of the false and misleading labeling, the Product is sold at a premium price, approximately no less than \$3.89 per unit, excluding tax, compared to other similar products represented in a non-misleading way.

Jurisdiction and Venue

97. Jurisdiction is proper pursuant to 28 U.S.C. § 1332(d)(2) (Class Action Fairness Act of 2005 or “CAFA”).

98. Under CAFA, district courts have “original federal jurisdiction over class actions involving (1) an aggregate amount in controversy of at least \$5,000,000; and (2) minimal diversity[.]” *Gold v. New York Life Ins. Co.*, 730 F.3d 137, 141 (2d Cir. 2013).

99. Upon information and belief, the aggregate amount in controversy is more than \$5,000,000.00, exclusive of interests and costs.

100. Plaintiff is a citizen of New York.

101. Defendant is a Connecticut corporation with a principal place of business in Corona, Riverside County, California and is a citizen of California.

102. This court has personal jurisdiction over defendant because it conducts and transacts

business, contracts to provide and/or supply and provides and/or supplies services and/or goods within New York.

103. Venue is proper because plaintiff and many class members reside in this District and defendant does business in this District and State.

104. A substantial part of events and omissions giving rise to the claims occurred in this District.

Parties

105. Plaintiff is a citizen of New York, New York County, New York.

106. Defendant Monster Beverage Company is a Connecticut corporation with a principal place of business in Corona, California, Riverside County.

107. During the relevant statutes of limitations, plaintiff purchased the Product within this district and/or State for personal consumption in reliance on the representations.

Class Allegations

108. The classes will consist of all purchasers of the Products in New York, the other 49 states and a nationwide class, during the applicable statutes of limitations.

109. Common questions of law or fact predominate and include whether defendant's representations were and are misleading and if plaintiff and class members are entitled to damages.

110. Plaintiff's claims and basis for relief are typical to other members because all were subjected to the same unfair and deceptive representations and actions.

111. Plaintiff is an adequate representative because his interests do not conflict with other members.

112. No individual inquiry is necessary since the focus is only on defendant's practices and the class is definable and ascertainable.

113. Individual actions would risk inconsistent results, be repetitive and are impractical to justify, as the claims are modest relative to the scope of the harm.

114. Plaintiff's counsel is competent and experienced in complex class action litigation and intends to adequately and fairly protect class members' interests.

115. Plaintiff seeks class-wide injunctive relief because the practices continue.

New York GBL §§ 349 & 350
(Consumer Protection from Deceptive Acts)

116. Plaintiff incorporates by reference all preceding paragraphs.

117. Plaintiff and class members desired to purchase, consume and use products or services which were as described and marketed by defendant and expected by reasonable consumers, given the product or service type.

118. Defendant's acts and omissions are not unique to the parties and have a broader impact on the public.

119. Defendant misrepresented the substantive, quality, compositional, organoleptic and/or nutritional attributes of the Products.

120. Defendant's conduct was misleading, deceptive, unlawful, fraudulent, and unfair because it gives the impression to consumers the Products contain sufficient amounts of the highlighted ingredient, vanilla, to independently characterize the taste or flavor of the Products, did not contain other flavor components which simulate, resemble or reinforce the characterizing flavor and only contained flavor from vanilla.

121. Plaintiff and class members would not have purchased the Products or paid as much if the true facts had been known, suffering damages.

Negligent Misrepresentation

122. Plaintiff incorporates by reference all preceding paragraphs.

123. Defendant misrepresented the substantive, quality, compositional, organoleptic and/or nutritional attributes of the Products.

124. Defendant's conduct was misleading, deceptive, unlawful, fraudulent, and unfair because it gives the impression to consumers the Products contain sufficient amounts of the highlighted ingredient, vanilla, to independently characterize the taste or flavor of the Products, did not contain other flavor components which simulate, resemble or reinforce the characterizing flavor and only contained flavor from vanilla.

125. Defendant had a duty to disclose and/or provide non-deceptive marketing of the Products and knew or should have known same were false or misleading.

126. This duty is based on defendant's position as an entity which has held itself out as having special knowledge and experience in the production, service and/or sale of the product or service type.

127. The representations took advantage of consumers' (1) cognitive shortcuts made at the point-of-sale and (2) trust placed in defendant, a well-known and respected brand in this sector.

128. Plaintiff and class members reasonably and justifiably relied on these negligent misrepresentations and omissions, which served to induce and did induce, the purchase of the Products.

129. Plaintiff and class members would not have purchased the Product or paid as much if the true facts had been known, suffering damages.

Breaches of Express Warranty, Implied Warranty of Merchantability and Magnuson Moss Warranty Act, 15 U.S.C. §§ 2301, et seq.

130. Plaintiff incorporates by reference all preceding paragraphs.

131. The Products were manufactured, labeled and sold by defendant and warranted to plaintiff and class members that they possessed substantive, functional, nutritional, qualitative,

compositional, organoleptic, sensory, physical and other attributes which they did not.

132. Defendant had a duty to disclose and/or provide non-deceptive descriptions and marketing of the Products.

133. This duty is based, in part, on defendant's position as one of the most recognized companies in the nation in this sector.

134. Plaintiff provided or will provide notice to defendant, its agents, representatives, retailers and their employees.

135. Defendant received notice and should have been aware of these misrepresentations due to numerous complaints by consumers to its main office over the past several years.

136. The Products did not conform to their affirmations of fact and promises due to defendant's actions and were not merchantable.

137. Plaintiff and class members would not have purchased the Products or paid as much if the true facts had been known, suffering damages.

Fraud

138. Plaintiff incorporates by references all preceding paragraphs.

139. Defendant's conduct was misleading, deceptive, unlawful, fraudulent, and unfair because it gives the impression to consumers the Products contain sufficient amounts of the highlighted ingredient, vanilla, to independently characterize the taste or flavor of the Products, did not contain other flavor components which simulate, resemble or reinforce the characterizing flavor and only contained flavor from vanilla.

140. Defendant's fraudulent intent is evinced by its failure to accurately identify the Products on the front label when it knew this was not true.

141. Plaintiff and class members would not have purchased the Products or paid as much

if the true facts had been known, suffering damages.

Unjust Enrichment

142. Plaintiff incorporates by reference all preceding paragraphs.

143. Defendant obtained benefits and monies because the Products were not as represented and expected, to the detriment and impoverishment of plaintiff and class members, who seek restitution and disgorgement of inequitably obtained profits.

Jury Demand and Prayer for Relief

Plaintiff demands a jury trial on all issues.

WHEREFORE, Plaintiff prays for judgment:

1. Declaring this a proper class action, certifying Plaintiff as representative and undersigned as counsel for the class;
2. Entering preliminary and permanent injunctive relief by directing defendant to correct the challenged practices to comply with the law;
3. Injunctive relief to remove, correct and/or refrain from the challenged practices and representations, restitution and disgorgement for members of the State Subclasses pursuant to the applicable laws of their States;
4. Awarding monetary damages and interest, including treble and punitive damages, pursuant to the common law and other statutory claims;
5. Awarding costs and expenses, including reasonable fees for plaintiff's attorneys and experts; and
6. Other and further relief as the Court deems just and proper.

Dated: February 18, 2020

Respectfully submitted,
Sheehan & Associates, P.C.
