Plaintiffs Cole Coleman, Bruce Coletta, David DiOrio, Robert Jacobson-Duteil, Brianna Lee, Cristin Trosien, and Michele Williams ("Plaintiffs"), individually and on behalf of all others similarly situated, bring this class action against Toyota Motor Sales, U.S.A., Inc. and Toyota Motor North America, Inc. (collectively, "Toyota" or "Defendants"), and allege as follows based on investigation of counsel and information and belief:

NATURE OF THE CASE

- 1. Toyota manufactures a vehicle called the RAV4 Hybrid (the "RAV4"). 2019 and 2020 model year RAV4 Hybrids (the "Class Vehicles") are equipped with a defective fuel tank system. In the standard promotional and marketing materials that it distributes in California and throughout the United States, Toyota advertises the fuel tank as having a capacity of 14.5 gallons. But the fuel tank on each Class Vehicle cannot be safely filled with more than nine to ten gallons, even when the fuel light indicates that the tank is not full. This is due to a fuel tank system defect. The shape of the tank causes the fuel pump to shut off before reaching a full 14.5 gallons.
- 2. The defect severely diminishes the total driving distance of the Class Vehicles. Toyota advertises that the RAV4 can travel 580 miles on a single "full" tank and specifically tells customers in national advertising campaigns that they will need fewer trips to the gas pump. Toyota also advertises that the RAV4 travels an estimated 41 miles per gallon when driving in city conditions, 38 miles per gallon on the highway, and 40 miles per gallon combined. In reality, because the defect prevents drivers from safely filling the tank with more than ten gallons of fuel, drivers can only travel about 400 miles on a "full" tank, leaving consumers without the promised benefits of Toyota's best-selling hybrid. The smaller tank size also necessarily requires more stops and starts, affecting mileage and materially limiting driving range.
- 3. Each Class Vehicle has been designed, manufactured, distributed, sold, and leased by Defendants, and each Class Vehicle's fuel tank system is defective. Toyota has known or should have known of this defect due to numerous complaints by consumers, pre-release testing, as well as feedback from dealerships. Toyota, however, does not inform purchasers

about the fuel tank system defect, and it continues to conceal material facts while its efforts to advertise, market, and sell the RAV4 in California and throughout the United States remain ongoing. Without the superior knowledge Toyota possesses about the defect, unsuspecting consumers continue to purchase the RAV4, expecting to be able to fill their vehicles with 14.5 gallons of fuel and to travel the mileage range Toyota advertises. Defendants' representations have induced Plaintiffs, and continue to induce Class members, to purchase and lease vehicles that do not perform as promised.

- 4. To date, Toyota has not offered a repair or replacement option that cures the fuel tank system defect. Had Defendants disclosed the defective nature of the RAV4 to Plaintiffs, they would not have purchased it or would have paid substantially less for one.
- 5. Plaintiffs therefore bring this action, individually, and on behalf of all similarly situated owners and lessees of 2019 and 2020 Toyota RAV4 Hybrids. Plaintiffs seek damages and injunctive relief for Defendants' violations of California consumer protection statutes and for fraudulent concealment.

PARTIES

A. Plaintiffs

6. Plaintiff Cole Coleman is a citizen and resident of Missouri. He purchased a new 2019 RAV4 Hybrid on September 2, 2019 from Bommarito Toyota in Hazelwood, Missouri, for approximately \$31,889 (less a \$900 rebate). Mr. Coleman purchased the RAV4 primarily for personal, family, or household use and has used the vehicle for regular everyday activities. Before purchasing his RAV4, Mr. Coleman saw Toyota's standard advertisements and marketing materials, including content on Toyota's website, in promotional brochures, and on vehicle Monroney stickers, about the RAV4's fuel tank capacity, fuel economy, and total driving distance. Based on Toyota's reported 14.5-gallon fuel tank capacity and estimated mileage of forty miles per gallon, Mr. Coleman believed that his RAV4 could travel over five hundred miles on one full tank of gas. Since purchasing the RAV4, however, he has never been able to fill the gas tank to the advertised 14.5-gallon capacity. At most, the tank will take about eight to ten

gallons, even when the fuel light indicates that the tank is not full. Anything more than that amount causes the tank to overflow. After repeated failed attempts to fill the gas tank to capacity, Mr. Coleman contacted a local Toyota dealership only to be told there is nothing they can do until Toyota releases a solution. The defective fuel tank remains installed on his RAV4, and Toyota has not offered a repair or replacement that eliminates the problems with the fuel tank system. As a result, Mr. Coleman must refuel more frequently than he would have to if the fuel tank system were defect-free, and the vehicle has never achieved the mileage range Toyota represented. At the time of purchase, Mr. Coleman was unaware of the defective nature of the RAV4's fuel tank system. Had Toyota disclosed the defect, Mr. Coleman would not have purchased a RAV4 or would have paid substantially less for it.

7. Plaintiff Bruce Coletta is a citizen and resident of New Jersey. He purchased a new 2019 RAV4 Hybrid on October 3, 2019 from Dayton Toyota in Dayton, New Jersey, for \$31,793.49. Mr. Coletta purchased the RAV4 primarily for personal, family, or household use and has used the vehicle for regular everyday activities. Before purchasing his RAV4, Mr. Coletta saw Toyota standard advertisements and marketing materials, including content on Toyota's website, in promotional brochures, and on vehicle Monroney stickers, about the RAV4's fuel tank capacity, fuel economy, and total driving distance. Based on Toyota's reported 14.5-gallon fuel tank capacity and estimated mileage of forty miles per gallon, Mr. Coletta believed that his RAV4 could travel over five hundred miles on one full tank of gas. Since purchasing the RAV4, however, he has never been able to fill the gas tank to the advertised 14.5gallon capacity, even when the fuel light indicates that the tank is not full. The tank will take no more than ten gallons. Anything more than that amount causes the tank to overflow. After repeated failed attempts to fill the gas tank to capacity, Mr. Coletta visited a local Toyota dealership. The dealership installed a replacement tank, but the replacement tank has the same defect. Toyota has not offered a repair or replacement that eliminates the problems with the fuel tank system. As a result, Mr. Coletta must refuel more frequently than he would have to if the fuel tank system were defect-free, and the vehicle has never achieved the mileage range Toyota

28

represented. At the time of purchase, Mr. Coletta was unaware of the defective nature of the RAV4's fuel tank system. Had Toyota disclosed the defect, Mr. Coletta would not have purchased a RAV4 or would have paid substantially less for it.

Plaintiff David DiOrio is a citizen and resident of Connecticut. He purchased a new 2019 RAV4 Hybrid on July 31, 2019 from Girard Toyota in New London, Connecticut, for approximately \$39,000. Mr. DiOrio purchased the RAV4 primarily for personal, family, or household use and has used the vehicle for regular everyday activities. Before purchasing his RAV4, Mr. DiOrio saw Toyota standard advertisements and marketing materials, including content on Toyota's website, in promotional brochures, and on vehicle Monroney stickers, about the RAV4's fuel tank capacity, fuel economy, and total driving distance. Based on Toyota's reported 14.5-gallon fuel tank capacity and estimated mileage of forty miles per gallon, Mr. DiOrio believed that his RAV4 could travel over five hundred miles on one full tank of gas. Since purchasing the RAV4, however, he has never been able to fill the gas tank to the advertised 14.5-gallon capacity, even when the fuel light indicates that the tank is not full. At most, the tank will take seven to eight gallons. Anything more than that amount causes the tank to overflow. Mr. DiOrio has experienced repeated failed attempts to fill the gas tank to capacity. The defective fuel tank remains installed on his RAV4, and Toyota has not offered a repair or replacement that eliminates the problems with the fuel tank system. As a result, Mr. DiOrio must refuel more frequently than he would have to if the fuel tank system were defect-free, and the vehicle has never achieved the mileage range Toyota represented. At the time of purchase, Mr. DiOrio was unaware of the defective nature of the RAV4's fuel tank system. Had Toyota disclosed the defect, Mr. DiOrio would not have purchased a RAV4 or would have paid substantially less for it.

9. Plaintiff Robert Jacobson-Duteil is a citizen and resident of Arizona. He purchased a new 2020 RAV4 Hybrid on February 9, 2020 from Big Two Toyota in Chandler, Arizona, for approximately \$31,000. Mr. Jacobson-Duteil purchased the RAV4 primarily for personal, family, or household use and has used the vehicle for regular everyday activities.

27

28

Before purchasing his RAV4, Mr. Jacobson-Duteil saw standard Toyota advertisements and marketing materials, including content on Toyota's website, in promotional brochures, and on vehicle Monroney stickers, about the RAV4's fuel tank capacity, fuel economy, and total driving distance. Based on Toyota's reported 14.5-gallon fuel tank capacity and estimated mileage of forty miles per gallon, Mr. Jacobson-Duteil believed that his RAV4 could travel over five hundred miles on one full tank of gas. Since purchasing the RAV4, however, he has never been able to fill the gas tank to the advertised 14.5-gallon capacity, even when the fuel light indicates that the tank is not full. At most, the tank will take ten to eleven gallons. Anything more than that amount causes the tank to overflow. After repeated failed attempts to fill the gas tank to capacity, Mr. Jacobson-Duteil visited a local Toyota dealership, but the dealership offered no solution. The defective fuel tank remains installed on his RAV4, and Toyota has not offered a repair or replacement that eliminates the problems with the fuel tank system. As a result, Mr. Jacobson-Duteil must refuel more frequently than he would have to if the fuel tank system were defect-free, and the vehicle has never achieved the mileage range Toyota represented. At the time of purchase, Mr. Jacobson-Duteil was unaware of the defective nature of the RAV4's fuel tank system. Had Toyota disclosed the defect, Mr. Jacobson-Duteil would not have purchased a RAV4 or would have paid substantially less for it.

10. Plaintiff Brianna Lee is a citizen and resident of California. She purchased a new 2019 RAV4 Hybrid on May 3, 2019 in Dublin, California, for \$35,524. She purchased the vehicle primarily for personal, family, or household use and has used the vehicle for regular everyday activities. Before purchasing her RAV4, Ms. Lee saw Toyota advertisements and marketing materials, including on Toyota's website, in brochures, and on vehicle Monroney stickers, about the vehicle's fuel tank capacity, fuel economy, and total driving distance. Based on Toyota's reported 14.5-gallon fuel tank capacity and estimated mileage of forty miles per gallon, Ms. Lee believed that the Toyota RAV4 could travel over five hundred miles on one full tank of gas. This was the primary reason why Ms. Lee purchased a RAV4, as she drives 100 miles every day for work. Since purchasing her RAV4, Ms. Lee has never been able to fill the

gas tank to the advertised 14.5-gallon capacity, even when the fuel light indicates that the tank is not full. At most, the fuel tank will take nine gallons. Anything more than that amount causes the tank to overflow. After repeated failed attempts to fill the gas tank to capacity, Ms. Lee visited a local Toyota dealership, but the dealership offered no solution. The defective fuel tank remains installed on her RAV4, and Toyota has not offered a repair or replacement that eliminates the problems with the fuel tank system. As a result, Ms. Lee must refuel more frequently than she would have to if the fuel tank system were defect-free, and the vehicle has never achieved the total driving distance Toyota represented. At the time of purchase, Ms. Lee was unaware of the defective nature of the RAV4's fuel tank system. Had Toyota disclosed the defect, Ms. Lee would not have purchased a RAV4 or would have paid substantially less for it.

Plaintiff Cristin Trosien is a citizen and resident of Michigan. She purchased a 11. new 2020 RAV 4 Hybrid on January 30, 2020 from Suburban Toyota in Farmington Hills, Michigan, for approximately \$40,000. She purchased the vehicle primarily for personal, family, or household use and has used the vehicle for regular everyday activities. Before purchasing her RAV4, Ms. Trosien saw Toyota standard advertisements and marketing materials, including content on Toyota's website, in promotional brochures, and on vehicle Monroney stickers, about the vehicle's fuel tank capacity, fuel economy, and total driving distance. Based on Toyota's reported 14.5-gallon fuel tank capacity and estimated mileage of forty miles per gallon, Ms. Trosien believed that the Toyota RAV4 could travel over five hundred miles on one full tank of gas. Since purchasing her RAV4, however, Ms. Trosien has never been able to fill the gas tank to the advertised 14.5 gallon capacity, even when the fuel light indicates that the tank is not full. At most, the fuel tank will take about nine to ten gallons. Anything more than that amount causes the tank to overflow. Ms. Trosien has experienced repeated failed attempts to fill the gas tank to capacity. The defective fuel tank remains installed on her RAV4, and Toyota has not offered a repair or replacement that eliminates the problems with the fuel tank system. As a result, Ms. Trosien must refuel more frequently than she would have to if the fuel tank system were defectfree, and the vehicle has never achieved the total driving distance Toyota represented. At the

28

time of purchase, Ms. Trosien was unaware of the defective nature of the RAV4's fuel tank system. Had Toyota disclosed the defect, Ms. Trosien would not have purchased a RAV4 or would have paid substantially less for it.

Plaintiff Michele Williams is a citizen and resident of Florida. She purchased a 12. new 2019 RAV4 Hybrid on October 10, 2019 from Miracle Toyota in Haines City, Florida, for \$37,890. Ms. Williams purchased the RAV4 primarily for personal, family, or household use and has used the vehicle for regular everyday activities. Before purchasing her RAV4, Ms. Williams say Toyota standard advertisements and marketing materials, including content on Toyota's website, in promotional brochures, and on vehicle Monroney stickers, about the RAV4's fuel tank capacity, fuel economy, and total driving distance. Based on Toyota's reported 14.5-gallon capacity and estimated mileage of forty miles per gallon, Ms. Williams believed that the Toyota RAV4 could travel over five hundred miles on one full tank of gas. Since purchasing the RAV4, however, Ms. Williams has never been able to fill the gas tank to the advertised 14.5gallon capacity, even when the fuel light indicates that the tank is not full. At most, the tank will take nine to ten gallons. Anything more than that amount causes the tank to overflow. After repeated failed attempts to fill the gas tank to capacity, Ms. Williams visited a local Toyota dealership, but the dealership offered no solution. The defective fuel tank remains installed on Ms. Williams' RAV4, and Toyota has not offered a repair or replacement that eliminates the problems with the fuel tank system. As a result, Ms. Williams must refuel more frequently then she would have to if the fuel tank system were defect-free, and her RAV4 has never achieved the mileage range Toyota represented. At the time of purchase, Ms. Williams was unaware of the defective nature of the RAV4's fuel tank system. Had Toyota disclosed the defect, Ms. Williams would not have purchased a RAV4 or would have paid substantially less for it.

В. **Defendants**

13. Defendants Toyota Motor Sales, U.S.A., Inc. and Toyota Motor North America, Inc. are Texas corporations and maintain their principal place of business in that state. At all times relevant herein, Defendants engaged in the business of designing, manufacturing,

1	marketing, warranting, distributing, selling, and leasing automobiles, including the Class
2	Vehicles, in California and throughout the United States.
3	JURISDICTION AND VENUE
4	14. This Court has jurisdiction under the Class Action Fairness Act, 28 U.S.C.
5	§ 1332, because this is a proposed class action in which there are at least 100 Class members,
6	the combined claims of Class members exceed \$5,000,000, exclusive of interest, attorneys' fees,
7	and costs, and Plaintiffs and Defendants are domiciled in different states.
8	15. This Court has personal jurisdiction over Defendants because they regularly
9	conduct business throughout California, including within this judicial District, and have
10	sufficient minimum contacts in the state to render the exercise of jurisdiction by this Court
11	proper and necessary.
12	16. Venue is proper in this District because a substantial part of the events or
13	omissions giving rise to Plaintiffs' claims occurred here, and Defendants caused harm to Class
14	members residing within this judicial District.
15	INTRADISTRICT ASSIGNMENT
16	17. Pursuant to Civil Local Rule 3-2(d), this action may be assigned to the San
17	Francisco or the Oakland Division, as the events giving rise to the causes of action alleged herein
18	occurred in Alameda County.
19	COMMON FACTUAL ALLEGATIONS
20	A. Toyota's Hybrid Vehicles
21	18. Toyota launched the RAV4 model in 1995 and introduced the first RAV4 Hybrid
22	in 2016. The RAV4 Hybrid's gas engine works in combination with an electric motor for
23	increased fuel economy. As described by Toyota:
24	The Hybrid Synergy Drive System utilizes a computer-controlled gasoline
25	engine and electric motor to provide the most efficient combination of power for the vehicle. To conserve energy, when the brakes are applied the braking force
26	
27	¹ See https://www.trucks.com/2019/03/08/5-things-to-know-about-toyotas-2019-rav4-hybrid/ (last visited Mar. 6, 2020).
28	

23. Some consumers, like Plaintiffs and Class members, are willing to pay more for a hybrid vehicle that offers better gas mileage and is easier on the environment than its gas-only counterpart. Toyota capitalizes on this consumer preference in its nation-wide advertising and marketing campaigns:⁸

Fueling

Hybrids have a fuel tank just like every other vehicle. The only difference is the number of times you need to visit the pump.

В. The RAV4 Hybrid

- 24. Of Toyota's Alternative Fuel Vehicles, the RAV4 is Toyota's best-seller.⁹ Toyota has sold hundreds of thousands of 2019 and 2020 RAV4 Hybrids. The base price for this model ranges from \$27,850 to \$36,880 depending on the style of the vehicle (e.g., LE, XLE, XSE, Limited). 10
- 25. According to Toyota's nationally-distributed standard advertising and marketing materials, including its website, informational brochures, and Monroney stickers, each 2019 and 2020 RAV4 Hybrid is equipped with a 14.5-gallon fuel tank. 11

26. The RAV4's fuel economy is also a focal point of Toyota's national marketing and advertising strategy: 12

27. With an estimated 41 miles per gallon in city driving, 38 miles per gallon on the highway, and 40 miles per gallon overall, Toyota represents that its RAV4 can travel 580 miles on one "full" tank of gas (or 100 miles for every 2.5 gallons as stated under the estimated mpg numbers pictured below). This is a key selling point for Toyota, and a primary reason why Plaintiffs and Class members purchase the RAV4.

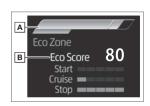

¹² See https://www.toyota.com/content/ebrochure/2019/rav4_ebrochure.pdf (last visited Mar. 6, 2020).

28. Knowing that fuel economy is a primary reason why a consumer may purchase a hybrid vehicle, Toyota not only emphasizes the fuel economy and mileage range of its vehicles in its marketing and advertising campaigns, but also in the design of the vehicle itself. Each Class Vehicle's interior Multi-Informational Display shows drivers various metrics for gauging performance and maximizing fuel efficiency, including "Distance to Empty" and "Total Average Fuel Economy." ¹³

29. Toyota also offers RAV4 drivers "ECO drive mode." The RAV4's Quick Reference Guide instructs owners to use this function "to help achieve low fuel consumption during trips that involve frequent accelerating." ¹⁴

C. The 2019 Fuel Tank Redesign

Distance to Empty 125 mi

⁰ Hold **1** to Reset

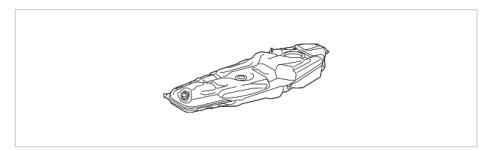

30. In 2019, Toyota undertook a complete redesign of the RAV4 Hybrid, including the fuel tank. 15 Toyota eliminated the "Native America papoose shape" fuel tank installed in earlier RAV4 models, pictured below: 16

¹³ See https://www.toyota.com/t3Portal/document/om-s/OM0R025U/pdf/OM0R025U.pdf (last visited Mar. 6, 2020).

¹⁶ See https://toyotaparts.bochtoyotasouth.com/oem-parts/toyota-fuel-tank-7700142280?origin=pla&gclid=EAIaIQobChMInZrOqa6G6AIVDMpkCh0gBQ6MEAQYAi ABEgJdZfD_BwE (last visited Mar. 6, 2020).

31. Instead, the 2019 and 2020 RAV4 Hybrid feature a new "latitudinal, saddleshaped design," which appears to have been designed, unlike its predecessor, to fit over some other vehicle component. 17

32. This saddle-shaped design, however, cannot be safely filled with 14.5 gallonsthe number Toyota advertises as the capacity of the fuel tank. Consumers can only fill the tank with nine to eleven gallons before the tank overflows, even when the fuel light indicates that the tank is not full.

D. **Consumer Reports of RAV4 Fuel Tank System Issues**

33. Since Toyota's redesign of the RAV4 fuel tank, consumers located across the country have filed complaints with the National Highway Traffic Safety Administration ("NHTSA"), reporting similar stories of being unable to safely fill the gas tanks on their vehicles. 18

1	34. One consumer from Kentucky complained: 19
2	I'VE ONLY FILLED THE TANK 4 TIMES SO FAR BUT I CAN NEVER
3	GET IT FULL. THE MOST IT WILL TAKE IS ABOUT 10 GALLONS
4	AND THAT IS ONLY IF I STAND THERE AND FORCE FEED IT MORE GAS VERY SLOWLY WHILE PULLING THE NOZZLE OUT A LITTLE
5	AT A TIME. I HAVE TO FILL IT WAY TOO FREQUENTLY, AND IN
	THE WINTER IT IS ESPECIALLY INCONVENIENT.
6	25 A DAVIA C. L' C. 1:C 1.20
7	35. A RAV4 owner from Livermore, California reported: ²⁰
8	WHEN FILLING UP, THE GAS CUTS OFF VERY EARLY; THE GAS GAUGE WILL ONLY READ 3/4 TO 7/8 FULL. THIS LEADS TO
9	"TOPPING OFF" WHICH IS AN ENVIRONMENTAL AND SAFETY
10	ISSUE.
11	
12	36. A Toyota customer from Illinois had the same experience: ²¹
13	FUEL TANK DOES NOT FILL UP TO FULL. RANGE ADVERTISED AS
14	WELL OVER 500 MILES BUT USUAL RANGE AFTER FILL UP IN
15	400S.
16	37. Complaints available on consumer online forums are similar. One person
17	reported: ²²
18	I just had my first fill-up on a new 2019 XSE Hybrid. I was able to get it full according to
19	the gauge but the tank only took 9.5 gallons. Made in Japan 4/2019 model.
20	38. Another consumer shared: ²³
21	We are having the same problem, with the light on and 20 miles left to go (according to
22	the monitor) I can only put 8 1/2 gallons.
23	
24

	15

1 39. As these consumer complaints illustrate, Toyota has not delivered a RAV4 2 Hybrid with the 14.5-gallon fuel tank it advertised, and the vehicle cannot travel the 580-mile 3 driving distance its drivers reasonably expected based on the representations Toyota made. 4 Ε. **Toyota's Knowledge of the Defect** 5 Whether from industry standard pre-release testing, post-release feedback from 40. 6 consumers and dealerships, warranty data, or complaint analysis, Toyota knew or should have 7 known that the saddle-shaped fuel tank system installed on its 2019 and 2020 RAV4 Hybrids is 8 defective. 9 In fact, in November 2019, Toyota published a "Tech Tip," referring to what the 41. company termed a "Fuel Gauge Concern." ²⁴ Toyota acknowledged that "[s]ome 2019 model 10 11 year RAV4 H[ybrid] customers may be experiencing some concern related to fuel gauge[s] reading less than full."²⁵ Consistent with the customer complaints reported online and to the 12 13 NHTSA, the Tech Tip alerted vehicle technicians that "The meter may display somewhere 14 around 3/4 to 7/8 full at the time of gas station auto stop."²⁶ Toyota recommended "no repairs" 15 at the time, stating that the "[c]oncern is under investigation," and instructing technicians to "contact TAS for further assistance."²⁷ 16 17 42. As of December 22, 2019, Toyota is no closer to curing the defect affecting the 18 Plaintiffs and Class members who have collectively purchased hundreds of thousands of these 19 vehicles. Toyota is simply telling customers they "should refuel before or when the low fuel 20 light illuminates, to prevent running out of fuel."²⁸ 21 43. Toyota has, however, admitted that the fuel tank system is flawed. In a trade 22 publication, Toyota is quoted as having confirmed that it is "investigating a fuel tank shape issue 23 ²⁴ See https://static.nhtsa.gov/odi/tsbs/2019/MC-10169408-9999.pdf (last visited Mar. 6, 24 2020). ²⁵ See id. 25 ²⁶ See id. 26 ²⁷ See id. ²⁸ See https://www.autoblog.com/2019/12/23/2019-toyota-rav4-hybrid-fuel-gas-tank-shape-

28

27

problem/ (last visited Mar. 6, 2020).

1	on certain RAV4 Hybrid vehicles [that] may prevent a full refill by up to several gallons
2	[and] may impact the vehicle's total available driving distance." ²⁹
3	44. As the consumer complaints quoted above show, the fuel tank system defect is a
4	safety and environmental hazard. Despite the potential for the unreasonable harm that may be
5	caused by the defect, Toyota continues to conceal material facts about it, even though it has
6	superior knowledge of the problem. Its sustained misrepresentations and omissions continue to
7	induce consumers to purchase vehicles that Toyota knows are not in the condition or equipped
8	with the features that are advertised. As a result, relying on Toyota's partial representations,
9	consumers continue to purchase vehicles that they would not have, or would have paid less for
10	had Toyota disclosed the fuel tank system defect.
11	CLASS ACTION ALLEGATIONS
12	45. Plaintiffs bring this class action on behalf of themselves and other similarly
13	situated individuals. Pursuant to Rules 23(a), (b)(1), (b)(2) and (b)(3) of the Federal Rules of
14	Civil Procedure, Plaintiffs seek to certify a class (the "Nationwide Class") of:
15 16	All persons and entities in the United States who purchased (other than for resale) or leased a model year 2019 through 2020 Toyota RAV4 Hybrid.
17	In the alternative, Plaintiffs seek certification of the following California Class:
18	California Class: All persons and entities in the state of California who purchased (other than for resale) or leased a model year 2019 through 2020 Toyota RAV4 Hybrid.
19 20	46. Excluded from the Class are Defendants, any entity in which any Defendant has
21	a controlling interest, and its legal representatives, officers, directors, employees, assigns and
22	successors. Also excluded from the Class is any judge, justice or judicial officer presiding over
23	this matter and the members of their immediate families and judicial staff.
24	47. <u>Numerosity</u> . Toyota sold at least hundreds of thousands of 2019 and 2020 RAV4
25	Hybrid vehicles. Members of the Class are located throughout the United States and are so
26	
2728	²⁹ See id.
	17

numerous that joinder is practicable. The precise number of Class members can be determined through discovery, including discovery of Defendants' business records.

- 48. <u>Common Questions of Law and Fact Predominate</u>. There are questions of law and fact common to Plaintiffs and Class members, and those questions predominate over any questions that may affect any individual Class member. Such common questions of law and fact include, but are not limited to:
 - a. Whether the Toyota RAV4 Hybrid was defective at the time of sale;
- b. Whether the defective fuel tank system substantially impairs the value of the RAV4 Hybrid;
- c. Whether Toyota knew about the defect, but continued to advertise, market, and sell the RAV4 Hybrid to consumers without disclosing the defective nature of the vehicle's fuel tank system to consumers;
- d. Whether a reasonable consumer would consider the defective nature of the fuel tank system and the consequences of the defect important to the decision to purchase a RAV4 Hybrid;
 - e. Whether Toyota breached implied warranties associated with the RAV4 Hybrid;
- f. Whether Toyota's affirmative representations and omissions regarding the fuel tank system installed on its RAV4 Hybrid vehicles (and their defects) were likely to deceive a reasonable consumer;
- g. Whether Toyota's conduct violated California's Unfair Competition Law, Cal. Bus. & Prof. Code § 17200, et seq.;
- h. Whether Plaintiffs and members of the Class overpaid for their RAV4 Hybrid vehicles;
- i. Whether Plaintiffs and Class members are entitled to equitable relief, including restitution and injunctive relief; and
- j. Whether Plaintiffs and Class members are entitled to damages or other monetary relief, and if so, in what amount.

- 49. <u>Typicality</u>. Plaintiffs' claims are typical of the claims of all members of the Class. Their claims arise from the same practices and conduct that give rise to the claims of all Class members and are based on the same legal theories. Plaintiffs, like all Class members, purchased Toyota RAV4 vehicles that contain a defective fuel tank system. Plaintiffs and the members of the Class would not have purchased, or would have paid substantially less for, their RAV4 vehicles had they known of the defect or the fact that Toyota would not adequately respond when the defect manifested.
- 50. Adequacy. Plaintiffs will fairly and adequately protect the interests of the Class. They have no interests antagonistic to those of the other Class members and are committed to vigorously prosecuting this case. Plaintiffs have retained counsel experienced in consumer class actions and complex litigation involving defective automobiles.
- 51. Superiority. A class action is superior to other available methods for the fair and efficient adjudication of this controversy. Given that the relative amount of each Class member's is small relative to the expense of litigating those claims, and given Defendants' financial resources, no Class member is likely to seek legal redress on an individual basis for the violations alleged in this complaint. Individual actions would significantly increase the expense to all parties, burden the court with duplicative litigation, and create a risk of inconsistent or varying adjudications that would establish incompatible standards of conduct for Defendants. Separate actions by individual Class members would also risk adjudications that would, as a practical matter, be dispositive of the interests of the other members not parties to the individual adjudications or would substantially impair or impede their ability to protect their interests. A class action, however, promotes an orderly and expeditious adjudication of the Class claims, presents fewer management difficulties, and ensures comprehensive supervision in a single forum.
- 52. Defendants acted and refused to act on grounds generally applicable to the Class, thereby making appropriate final injunctive relief with respect to the members of the Class as a whole.

53. All members of the Class are ascertainable by reference to objective criteria. Defendants have, or have access to, address information for Class members which may be used for the purpose of providing notice of the pendency of this class action.

CAUSES OF ACTION

COUNT I

VIOLATION OF CALIFORNIA'S CONSUMER LEGAL REMEDIES ACT, Cal. Civ. Code § 1750, et seq., ("CLRA")

- 54. Plaintiff Lee brings this claim on behalf of herself and the members of the Class, or alternatively, the California Class, under the laws of that state, against Defendants.
- 55. Plaintiffs re-allege and incorporate by reference the allegations contained in the paragraphs above as if fully set forth herein.
- 56. California's Consumers Legal Remedies Act ("CLRA"), Cal. Civ. Code § 1750, et seq., prohibits "unfair methods of competition and unfair or deceptive acts or practices undertaken by any person in a transaction intended to result or which results in the sale or lease of goods or services to any consumer."
 - 57. Each Defendant is a "person" as defined by Cal. Civ. Code § 1761(c).
- 58. Plaintiffs and Class members are "consumers" within the meaning of Cal. Civ. Code § 1761(d).
- 59. Defendants provide "goods" or "services" within the meaning of Cal. Civ. Code §§ 1761(a), 1761(b) and 1770. The sale or lease of the Toyota RAV4 constitutes sale or lease of such goods or services.
- 60. Plaintiffs and Class members engaged in "transactions" under Cal. Civ. Code § 1761(e), including the purchase and lease of Defendants' vehicles.
- 61. Toyota made misleading representations or omissions concerning the characteristics of the RAV4, including the vehicle's fuel tank capacity and total driving distance.
- 62. Plaintiffs and Class members were deceived into purchasing or leasing the vehicle by Toyota's failure to disclose knowledge of the defect.

- 63. The facts, which Defendants misrepresented and concealed as alleged in the preceding paragraphs, were material to Plaintiffs' and Class members' decisions about whether to purchase the RAV4.
- 64. In violation of Cal. Civ. Code § 1770(a)(5), Defendants represented that the RAV4 had characteristics, uses, and benefits that it does not have.
- 65. Additionally, by the conduct described in this complaint, Defendants have violated Cal. Civ. Code § 1770(a)(7), (9), and (16) by representing that the RAV4 is of a standard, quality, or grade that it is not; by advertising the RAV4 with intent not to sell the laptop as advertised; by representing that the vehicle was supplied in accordance with a previous representation when it was not.
- 66. Defendants had a duty to disclose the omitted facts because it had exclusive knowledge of material facts not known to Plaintiffs and Class members (that the fuel tank system was defective), because they actively concealed material facts, and because they did not provide Plaintiffs and Class members proper notice of the defect, and because they otherwise suppressed true material facts.
- 67. Plaintiffs and members of the Class have suffered harm as a result of these violations of the CLRA because they have paid money to Defendants that they otherwise would not have paid.
- 68. Under Cal. Civ. Code § 1780, Plaintiffs and Class members seek appropriate equitable relief, including an order enjoining Defendants from the unlawful practices described herein, as well as recovery of attorneys' fees and costs of litigation.
- 69. Pursuant to Cal. Civ. Code § 1782, Plaintiffs mailed Defendants a CLRA demand letter via certified mail. If Defendants fail to provide the relief demanded within the time allowed by law, Plaintiffs will amend their complaint to seek actual and punitive damages for violation of the CLRA.

COUNT II VIOLATION OF THE CALIFORNIA UNFAIR COMPETITION LAW, Cal. Bus. & Prof. Code § 17200, et seq. ("UCL")

- 71. Plaintiff Lee brings this claim on behalf of herself and the members of the Class, or alternatively, the California Class, under the laws of that state, against Defendants.
- 72. Plaintiffs re-allege and incorporate by reference the allegations contained in the paragraphs above as if fully set forth herein.
- 73. California Bus. & Prof. Code § 17200, *et seq.*, prohibits acts of unfair competition, including any "unlawful, unfair or fraudulent business act or practice."
- 74. Defendants have engaged in a pattern and practice of acts of unfair competition in violation of California's UCL, including the practices alleged herein.
- 75. By violating the Plaintiffs' and other Class members' rights, and engaging in the activity recited above, Defendants have committed and continue to commit and engage in "unlawful, unfair or fraudulent business acts or practices" as defined in Bus. & Prof. Code § 17200, et seq.
- 76. Cal. Bus. & Prof. Code § 17204 provides that an action for violation of California's unfair competition law may be brought by persons who have suffered injury in fact and have lost money or property as a result of such unfair competition, and Cal. Bus. & Prof. Code § 17203 provides that a court may grant injunctive and equitable relief to such persons.
- 77. The unlawful conduct of Defendants alleged herein, are acts of unfair competition under Cal. Bus. & Prof. Code § 17200, *et seq.*, for which Defendants are liable and for which the court should issue equitable and injunctive relief, including restitution, pursuant to Cal. Bus. & Prof. Code § 17203.

_

³⁰ A declaration may be used in lieu of an affidavit. Cal. Civ. Code § 2015.5.

- 11
- 14
- 16
- 17
- 19
- 22
- 24
- 25 26

- 78. Through their conduct, Defendants have engaged in unfair business practices in California by employing and utilizing the practices complained of herein. Defendants' use of such unfair business practices constitutes unfair competition that has provided and continues to provide Defendants with an unfair advantage over their competitors.
 - 79. Defendants' conduct as alleged herein is unlawful, unfair, and fraudulent.
- 80. Defendants' conduct as alleged herein is "unlawful" in that, among other things, it violates the California Consumer Legal Remedies Act, the Song-Beverly Warranty Act, and constitutes fraudulent concealment.
- 81. Defendants' conduct as alleged herein is also "unfair." Defendants' policy of misrepresenting that their products are not defective and inducing individuals to buy their products by providing these misrepresentations, constitutes an unfair business act or practice within the meaning of Cal. Bus. & Prof. Code § 17200, et seq., in that the justification for Defendants' conduct is outweighed by the gravity of the consequences to the general public. There were reasonable available alternatives for Defendants to further their business interests other than misleading the public. Indeed, the burden and expense of disclosing accurate information about the RAV4's fuel tank system would be minimal while the negative impact on the general public in the aggregate is significant. Such conduct is also contrary to public policy, immoral, unethical, oppressive, unscrupulous or substantially injurious to consumers.
- 82. Further, Defendants' conduct constitutes "unfair" business acts and practices because Defendants' practices are "likely to cause substantial injury" to Plaintiffs and members of the general public, which are not "reasonably avoidable" by Plaintiffs and members of the general public and the injury is "not outweighed" by the practice's benefits to Plaintiffs and members of the general public. Such conduct is ongoing and continues to this date.
- 83. Plaintiffs and members of the general public relied upon Defendants' unfair business acts and practices—the material representations, omissions, and non-disclosures—to their detriment.

- 84. Plaintiffs and members of the general public have suffered injury in fact and have lost money as a result of Defendants' unfair business acts and practices.
- 85. Defendants' scheme, as alleged herein, is also "fraudulent," in that it is knowingly calculated and likely to mislead.
- 86. As more fully described above, Defendants knowingly and intentionally concealed from Plaintiffs and Class members that the Toyota RAV4 has a defective fuel tank system that reduces a vehicle's total driving distance.
- 87. Defendants knew, recklessly disregarded, or should have known that their representations, omissions, and non-disclosures were false, misleading, untrue, deceptive, or likely to deceive or mislead the public.
- 88. Plaintiffs and members of the Class relied upon Defendants' material representations, omissions, and non-disclosures to their detriment.
- 89. Plaintiffs and members of the Class have suffered injury in fact and have lost money as a result of Defendants' fraudulent business acts and practices. This injury was directly and substantially caused by Defendants' intentional acts, as alleged above.
- 90. Defendants have continued to take steps to perpetuate these deceitful practices against Plaintiffs, Class members, and the general public. Unless enjoined, Defendants will continue to harm Plaintiffs, Class members, and the general public.
- 91. As a result of Defendants' unfair business practices, Defendants have reaped unfair benefits and illegal profits at the expense of the Plaintiffs and Class members. Defendants should be made to disgorge its ill-gotten gains and restore such monies to Plaintiffs and Class members. Defendants' unfair business practices furthermore entitle Plaintiffs and Class members herein to obtain preliminary and permanent injunctive relief, including, but not limited to, orders that Defendants cease its complained-of practices and account for, disgorge, and restore to Plaintiffs and Class members the compensation unlawfully obtained from them.

COUNT III BREACH OF IMPLIED WARRANTY OF MERCHANTIBILITY, VIOLATION OF THE SONG-BEVERLY ACT, Cal. Civ. Code § 1790, et seq.

- 92. Plaintiff Lee brings this claim on behalf of herself and the members of the Class, or alternatively, the California Class, under the laws of that state, against Defendants.
- 93. Plaintiffs re-allege and incorporate by reference the allegations contained in the paragraphs above as if fully set forth herein.
- 94. Plaintiff Lee purchased a Toyota RAV4 equipped with a defective fuel tank system. At the time of purchase, Defendants were in the business of manufacturing and selling these goods.
- 95. By placing their vehicles in the stream of commerce, Defendants impliedly warranted their vehicles were reasonably fit for their intended use.
- 96. Defendants' vehicles are not merchantable. The vehicles are unfit for the ordinary purposes for which such goods are used and were not of the same quality of those generally acceptable in the trade. In breach of the implied warranty of merchantability, the RAV4's fuel tank cannot hold the advertised amount of fuel—14.5 gallons, severely reducing the total distance a driver is able to travel, well below the 580-mile driving range Toyota that represents.
- 97. Defendants' vehicles were not reasonably fit for their intended use when Defendants put the RAV4 on the market.
 - 98. The defects in the vehicles were not open or obvious to consumers.
- 99. Any purported limitation of the duration and scope of the implied warranty of merchantability given by Defendants is unreasonable, unconscionable and void, because Defendants knew or recklessly disregarded the defect in the fuel tank system, which could not be discovered, if at all, until the vehicles were used for a period of time longer than the period of any written warranty, and Defendants willfully withheld information about the defects from purchasers of the vehicles.

- 100. Moreover, due to the unequal bargaining power between the parties, Plaintiffs and Class members had no meaningful alternative to accepting Defendants' attempted pro forma limitation of the duration of any warranties.
- 101. As a direct and proximate result, Plaintiffs and Class members have been damaged in that, inter alia, they would not have purchased or would have paid substantially less for Defendants' vehicles.
- 102. Defendants' breach of the implied warranty was a substantial factor in causing Plaintiffs' and Class members' harm.

COUNT IV FRAUDULENT CONCEALMENT

- 103. Plaintiffs bring this claim against Defendants on behalf of themselves and the members of the Nationwide Class under the common law of fraudulent concealment. In the alternative, Plaintiffs bring this claim against Defendants under the laws of the state where Plaintiffs and Class members purchased the Class Vehicles.
- 104. Plaintiffs re-allege and incorporate by reference the allegations contained in the paragraphs above as if fully set forth herein.
- 105. Defendants intentionally concealed that the Toyota RAV4 is defective and further affirmatively misrepresented to Plaintiffs and Class members in advertising and other forms of communication, including standard and uniform material provided with each car and on its website, that the Class Vehicles they were selling had no significant defects, that the fuel tank had a capacity of 14.5 gallons, and that RAV4 drivers could travel 580 miles on a single "full" tank. Defendants knew about the defect in the fuel tank system when making such representations.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs, and each Class member, pray for judgment against Defendants as follows:

1	A.	That this action and th	e proposed class be certified and maintained as a class
2	action, appointing Plaintiffs as representatives of the Class, and appointing the attorneys and law		
3	firms representing Plaintiffs as counsel for the Class;		
4	В.	For actual damages, res	titution, and all other appropriate legal and equitable and
5	injunctive re	elief;	
6	C.	For declaratory relief;	
7	D.	For pre-judgment and p	ost-judgment interest;
8	E.	For civil penalties, as re	equested herein;
9	F.	For punitive and exemp	lary damages, as requested herein;
10	G.	For attorneys' fees and	costs as permitted by law;
11	Н.	For appropriate injuncti	ve relief; and
12	I.	For such other and furth	ner relief as this Court may deem just and proper.
13		DE	MAND FOR JURY TRIAL
14	Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury on		vil Procedure 38(b), Plaintiffs demand a trial by jury on
15	all causes of	action so triable.
