Missed out on Amazon?... Missed out on Amazon Web Services?... Make sure you don't miss taking advantage of...

JEFF BEZOS' BIG BET

On April 26th, I predict Amazon Inc.'s biggest innovation will be revealed in response to a global event. This breakthrough innovation could not only boost their business... but also open up a unique opportunity that could double, 10X, even 20X your investment over the long haul.

Bigger than Amazon. Bigger than AWS. Bigger than Prime.

Dear Reader,

Take a look at the photo below —

Maps Data: ©2020 Google
47° 40' 21.1332" N
Google Earth
200 ft
N

This is aerial footage of a secretive factory Jeff Bezos has been quietly funding over the last two years.

Located in the heart of Washington...

This factory is ground zero —

Of a massive technological breakthrough Amazon has just patented —

That'll impact the way you shop, travel, play, conduct business, communicate with friends and family... and almost everything you do.

And *unlike* all the new-age technologies — **A.I., 5G, Blockchain, IoT** — that mostly cater to the big cities...

This secret new technology will eventually be available to every American... even if they are in the remotest corner of America.

Or anywhere else in the world.

Because of its massive penetration capability... this technology will re-write every aspect of the American economy...

Whether it's:

- **Telehealth**
- **Online education**
- **Travel and tourism**
- **Manufacturing**
- **Telecommunications**
- **Defense...**

In fact, almost every industry will be rocked by it.

This breakthrough is part of a bigger project which the CEO of Amazon confirms as

"The most important thing I'm doing"
— Jeff Bezos

If you know Jeff Bezos... you know he makes things happen.

And make things happen very fast.

In 1996 there was not even a whiff of Amazon...

In two years-time the online bookstore was expanding beyond books and getting into everything else.

Just two years.

In 2006, the majority of Americans still hadn't heard of Amazon's foray into cloud services.

By 2008, Amazon was expanding its cloud services across the Atlantic...

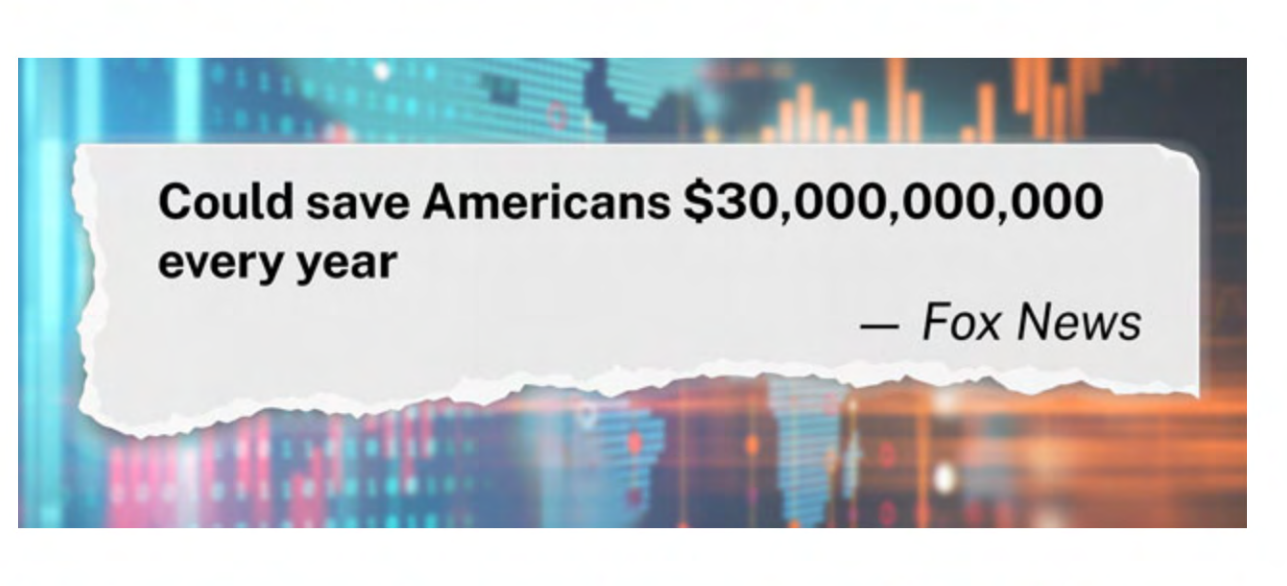
Just two years.

So you can imagine what will happen within two years of this new breakthrough launching.

No wonder the media is going into overdrive.

Take a look...

Amazon's most lucrative business
— Morgan Stanley



Could save Americans $30,000,000,000 every year
— Fox News

Seismic Jolt. Investment to top $10 billion
— Quilty Analytics

Investors may want to pay attention to Jeff Bezos
— Adam Jonas

Make no mistake —

If you thought Bezos' introduction of Prime...

Blue Origin...

Or even Amazon were disruptive to the market,

Just wait...

On April 26th, we belive the effects of Amazon's new technology will be discussed at an important tech summit.

I'll reveal more details about this summit further down, but right now all you need to know is...

The ultimate disruptive technology that'll forever change the way American companies conduct business.

Now, before you start guessing, this breakthrough has nothing to do with

- **Aerial delivery drones...**
- **Breakthroughs in real-time shipping...**
- **Or new, innovative services on Prime...**

Instead... it's about a quantum leap forward in technology — that will upgrade Amazon from being just an online shopping platform to becoming an integral part of your life.

In short, following patent # **10,556,709** filed in Washington...

Bezos and his team have officially kicked-off their most ambitious project – Universal Internet.

A groundbreaking technology that'll beam down internet from the sky...

Making internet available ***everywhere*** and ***anytime***...

From the Mojave Desert to the Grand Canyon to the middle of the Atlantic Ocean

No more blackouts...

No more dropped calls...

No more searching for WiFi bars...

And going by Amazon's past record of undercutting competition...

It could be at a fraction of the cost of what people pay for their internet today.

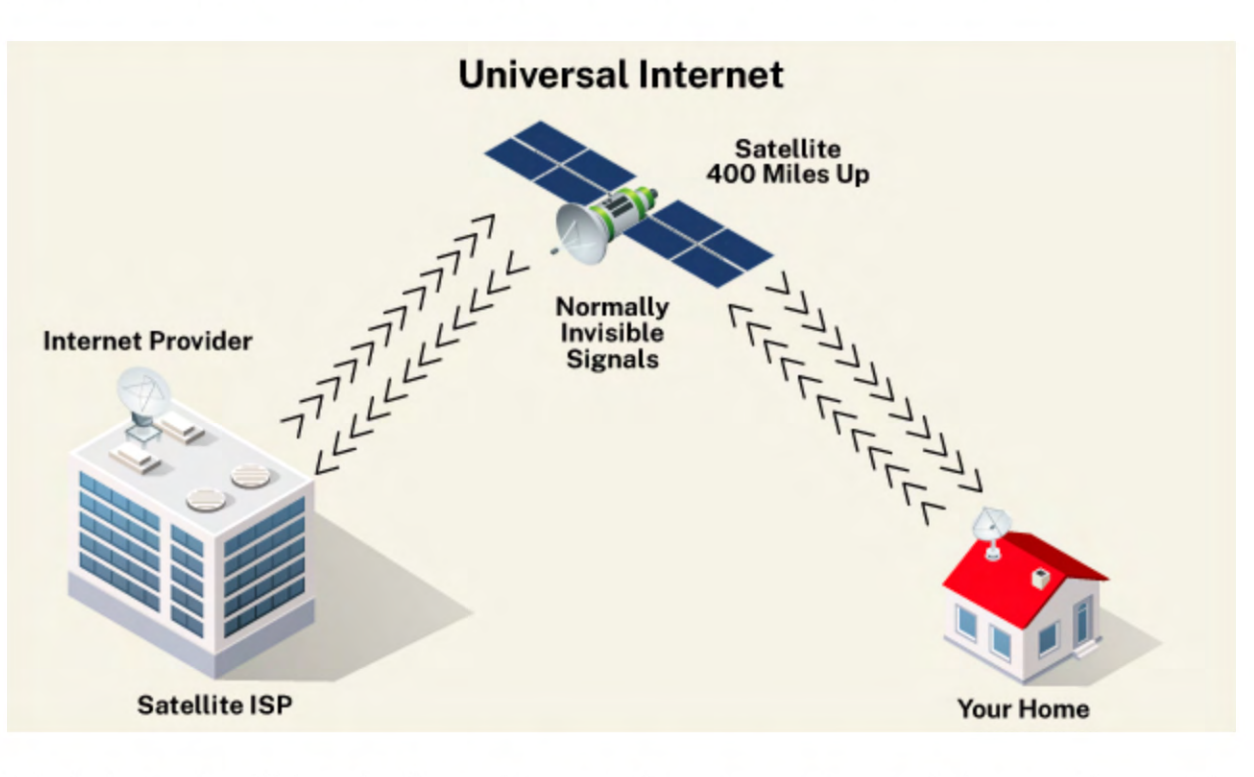
Now to be clear — this is NOT an upgrade to your existing internet.

It's radically different.

Instead of depending on telephone lines, cell phone towers, and fiber optic cables like in the old days...

Bezos' team has developed (and filed a patent for) a low flying satellite system that's set to be the next jump forward for the internet...

Streaming 4K video quality from the satellite... Straight to your device.



Because this internet will be designed to reach every corner of the earth... and comes from the stars above, I call it **"StarNet Universal Internet"** or **"StarNet"** for short.

And for those who get in early...

You could set yourself up for a life changing fortune in the coming years...

- **without buying a single share of Amazon,**
- **without selling or buying risky Amazon options, and**
- **without buying corporate bonds**

The profit potential here is so huge, the popular tech magazine ***Inc.*** wrote...

This Could Be Jeff Bezos' Largest Bet Yet For Amazon's Future
— Inc.

The last time Amazon made such a massive disruption was back in 2006 with Amazon's Web Services (AWS)...

And just as it with every disruption, the profit potential is staggering...

For example, see what could have happened to $10,000 invested in 2004 before Amazon's earlier "BIG" disruption.

It's still growing, and those holding it still could see...

Every $10,000 grow to over $850,000

Although you might not have heard of Amazon Web Services (AWS)...

AWS is Amazon's answer to data storage (commonly known as the cloud)

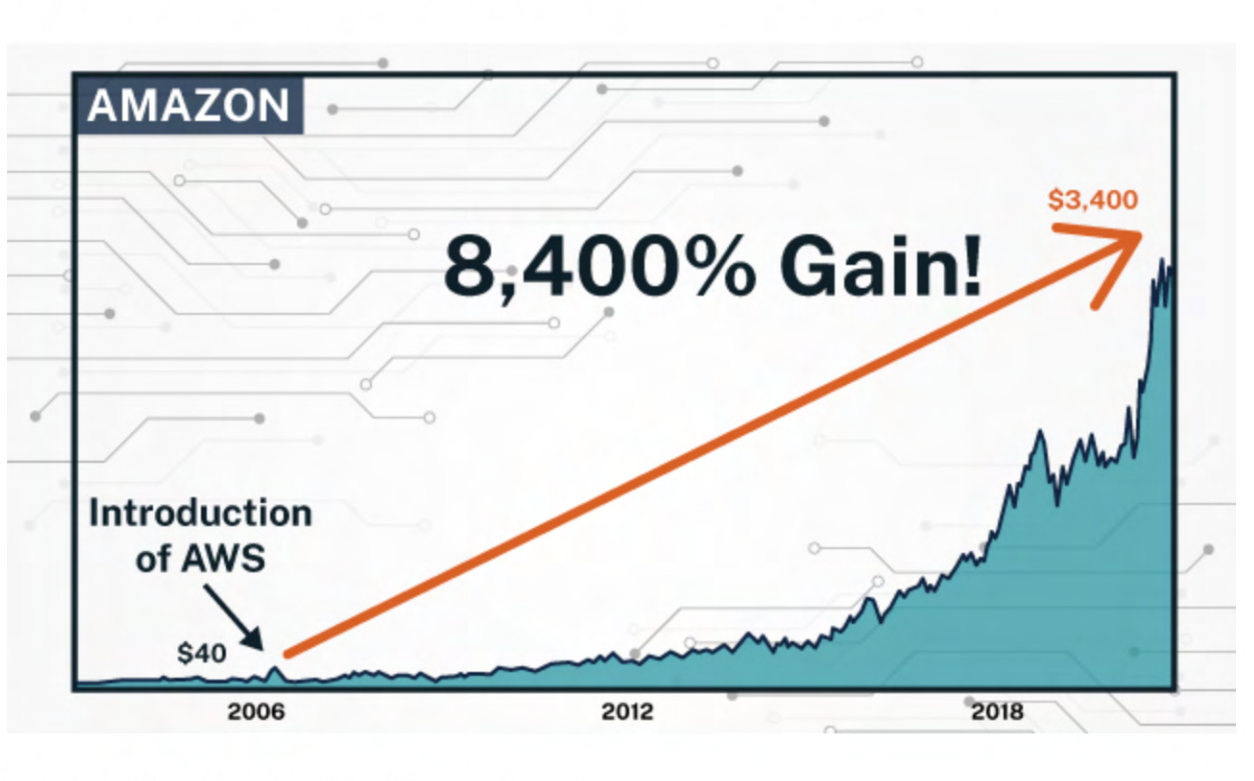
And although AWS came late to the cloud party...

In 2006, they were able to take a boring industry like cloud computing...

And turn it into a $35 billion-a-year juggernaut.

And those who got into Amazon at the time AWS launched...

Were able to take a $10,000 stake and turn it into a rare $850,000...



Obviously, gains like these don't happen often.

But here's the crazy thing...

What we're about to see could dwarf even that.

That's because on **April 26th**...

I believe Amazon's plan for an entire new version of the internet will be discussed at length...

A worldwide network that will blanket the globe —

Without a single cell tower...

Cable...

OR wire.

And the implications for business are massive.

And it's no exaggeration — to say we're looking at a multi-trillion industry that could make Amazon's 25-year growth seem slow.

It's not just *me* saying this.

- **Goldman Sachs believes this will grow to be a trillion-dollar industry within 20 years... even *faster* than Amazon.**
- **Morgan Stanley is even more specific and predicts the industry will grow to be a $1.1 trillion...**
- **And a study by the Bank of America Merrill Lynch pegged the number to be closer to $2.7 trillion.**

That's more than the size of the entire global auto industry

And twice the size of the global pharma industry.

Make no mistake — we're not talking about an upgrade... what you're about to witness is the birth of a new industry.

Once launched... just imagine the possibilities.

No more poor signal strength... or conversations interrupted with

"Can you hear me now?"

No more looking at your phone checking bars...

Always receiving high-speed internet, uninterrupted, unlimited... everywhere you go.

In airplanes... on cruise ships... in the woods... on remote roads... farms... Fast internet everywhere.

And the best part... staying connected without having to shell out a single dollar in "roaming fees".

We're looking at a total shakeup of internet technology.

Is it any wonder —

The world's top billionaires and investors are scrambling to take advantage of this disruptive new technology?

We're talking...

- **Bill Gates,**
- **Peter Thiel,**
- **Ron Baron...**

And others...

But while they tried to keep their billions-making strategy secret...

The mainstream media got a whiff and reported what little they could get their hands on.

But the sad thing is...

99.9% of regular Americans still have ***no idea*** what's about to happen.

And unfortunately... most are going to miss out.

So, if you've never heard of this opportunity before, it's NOT your fault...

Wall Street wants it that way.

But that's why I've put together this short presentation...

In the next few minutes, I'm going to show you ***exactly*** how you could position yourself to cash in on this massive opportunity...

BEFORE the March 9th announcement.

But before I do, please understand —

What I believe we're about to witness as soon as March is truly historic...

We're about to watch the birth of an entire industry and the gains could be stratospheric.

As any economist will tell you...

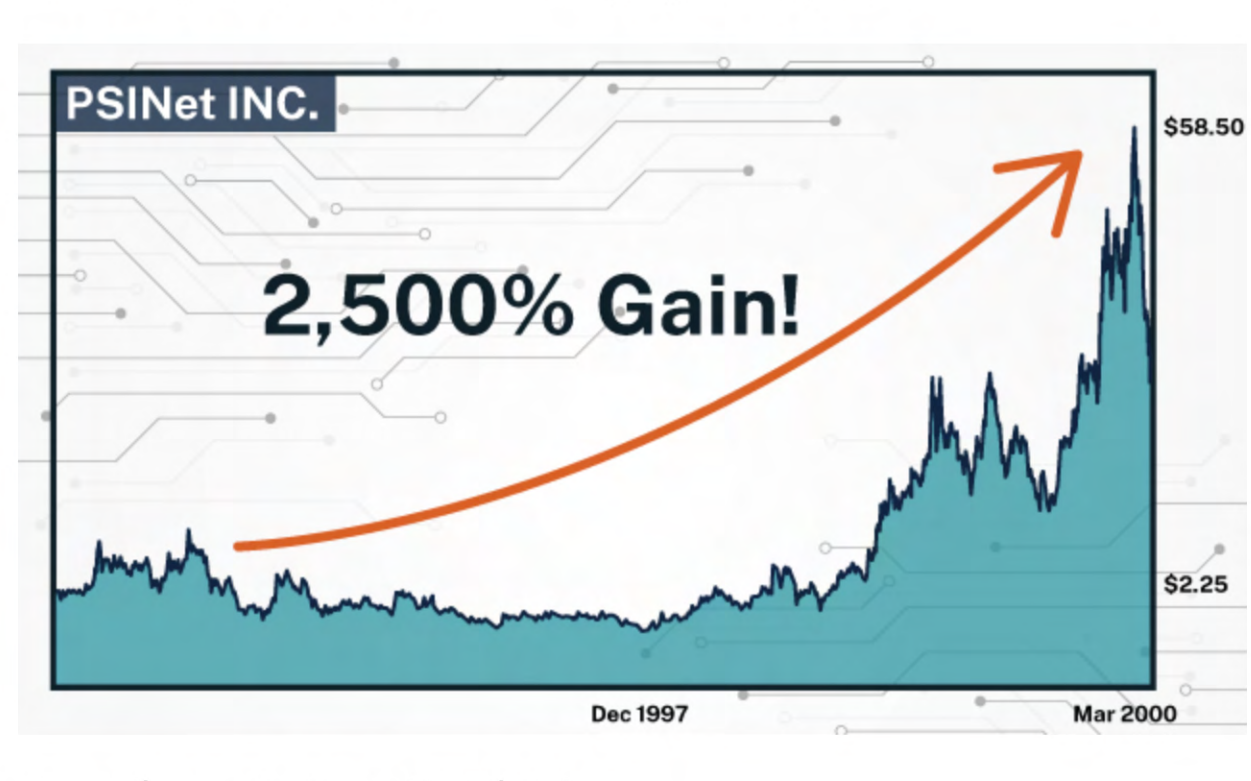
The biggest gains in the markets come from getting in BEFORE a major breakthrough.

Take the original internet technologies for example...

See what happened with PSINet.

This little-known company was one of the first companies to sell internet connectivity

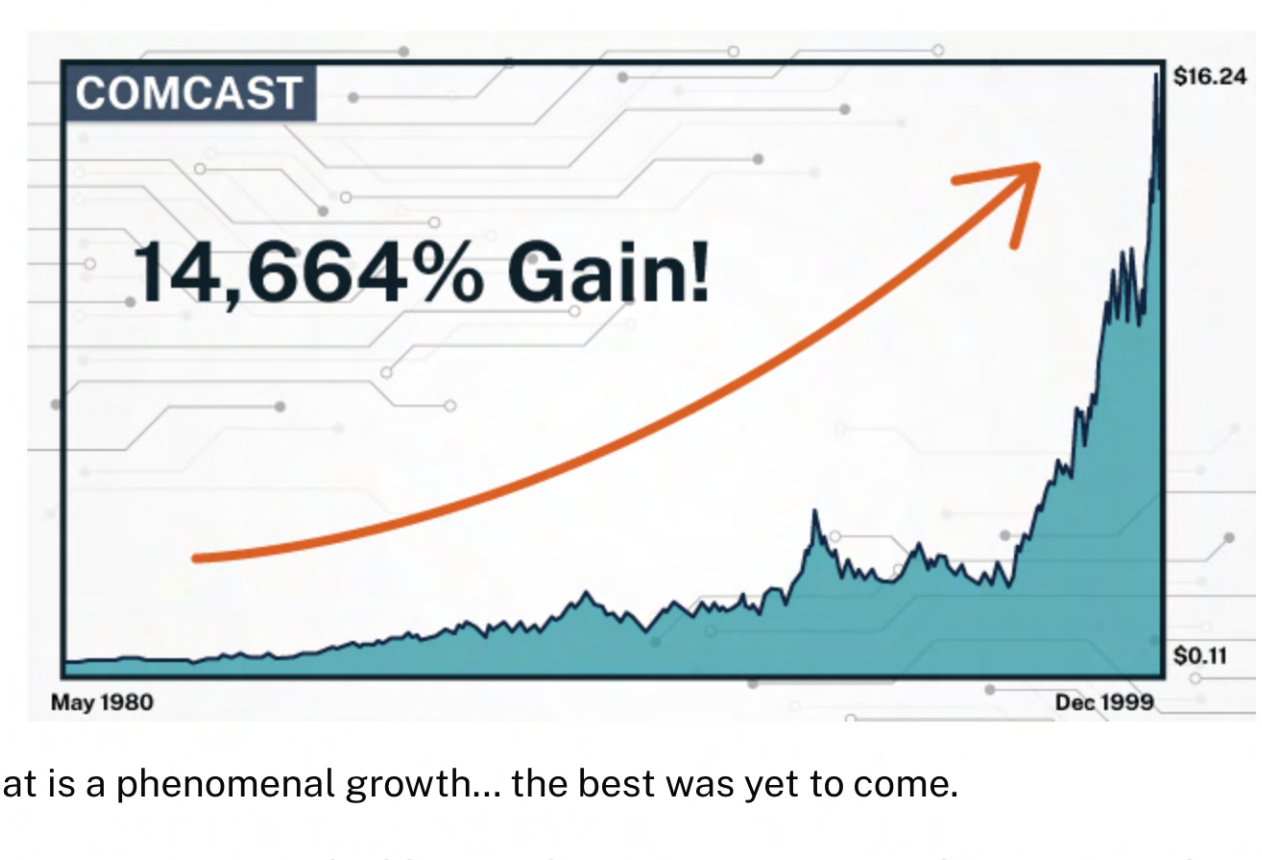
In a little over two years, their stock shot up by over 2,500%.



As you can see, these are exceptional gains.

Or take Comcast...

Those who saw what was coming in 1980... saw their investments shoot up by a whopping **14,664%**... by the time the internet took off in 2000.



While that is a phenomenal growth... the best was yet to come.

When new upstarts started adding applications, services, and innovations that took the internet to new territories.

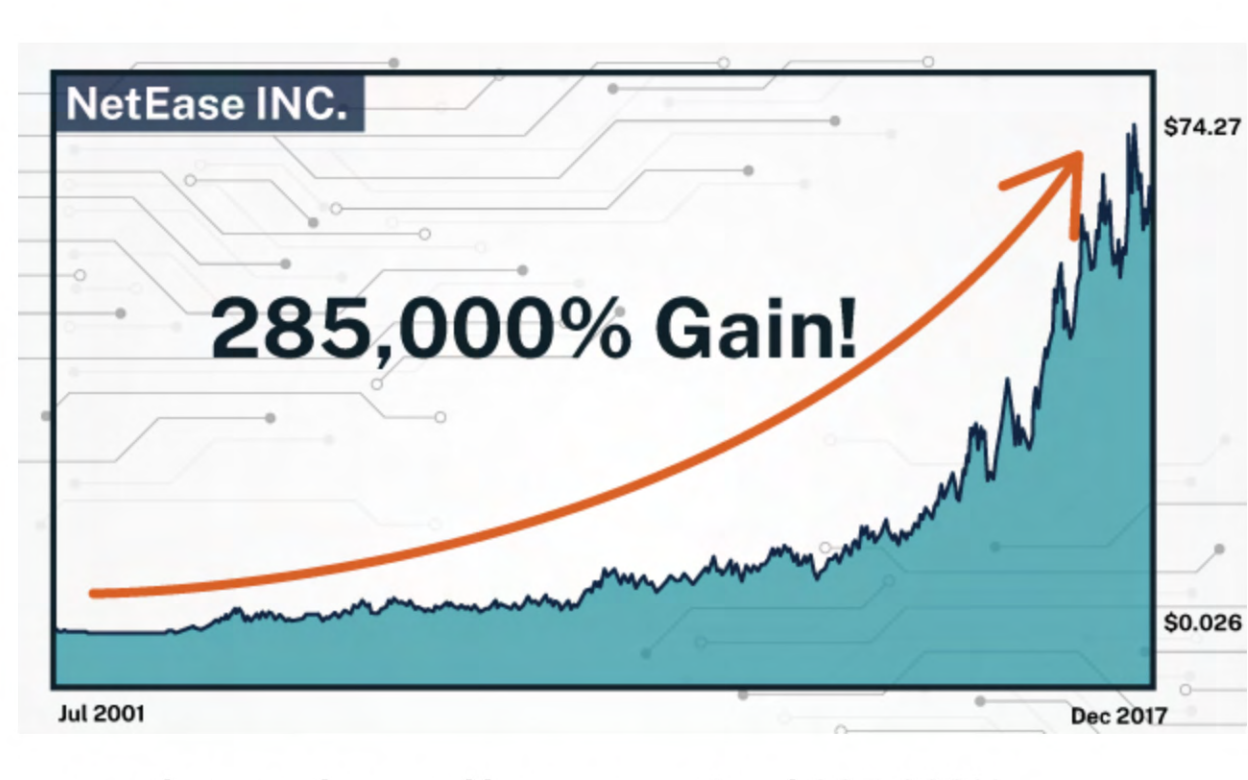
Take NetEase for example.

Way back in 1997, when computer gaming was still in its infancy...

This company realized that the internet offers a huge virtual arena where digital gladiators can battle with one another.

People laughed at the notion... but you won't believe the kind of growth they saw.

Here take a look.



As you can see... **their stock soared by an exceptional 285,000%.**

Even though it took over sixteen years to achieve those gains...

Who would not want to turn a $1,000 into over $2,850,000?

The thing is, it all follows a very simple pattern.

Whether it is the launch of the internet... or significant upgrades to the internet... Those who saw it coming ahead of time could've made their fortunes.

All they had to do was be lucky enough to get the timing right.

Now of course, these are just some of the highest gains I found.

There might be others.

But more importantly, I believe... another upgrade is around the corner.

In fact, this time the change is so significant... I prefer to call it a RESET rather than an upgrade.

One that has the potential to turn one small investment today into the kind of wealth most people only ever dream of.

But you've got to hurry —

As you'd expect... with this much profit potential...

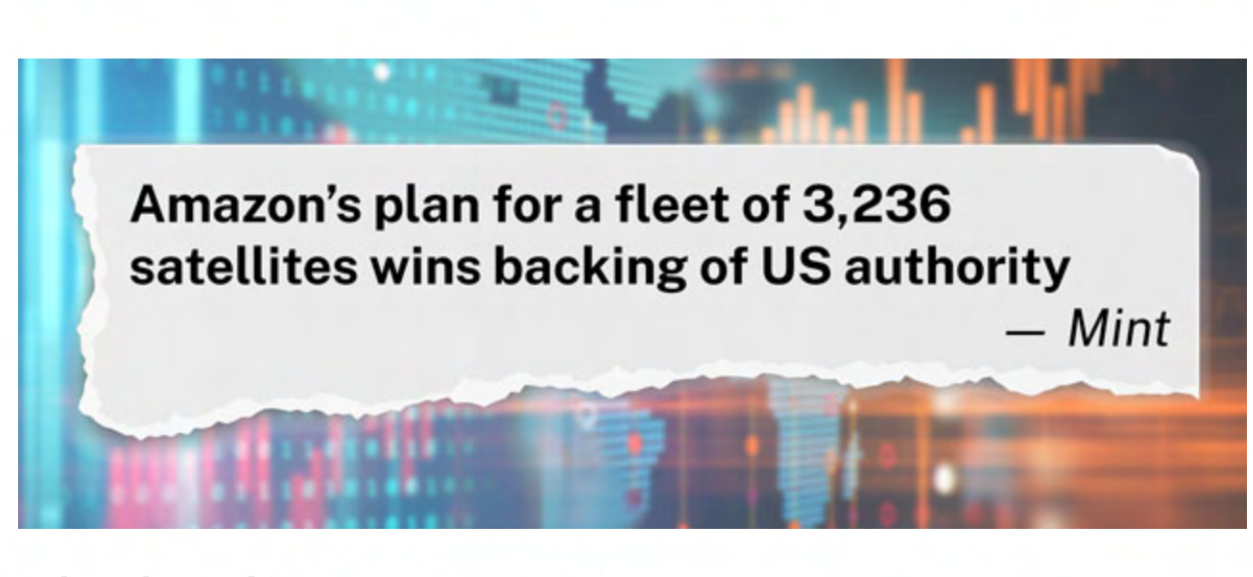
And with as much attention as Bezos gets...

This secret is already slowly coming out...

As we speak — the media is starting to sniff around this story...

Amazon planning 3236-satellite constellation for internet
— SpaceNews

Part of Jeff Bezos' Master Plan
— Atlantic



Amazon's plan for a fleet of 3,236 satellites wins backing of US authority
— Mint

Who knows how long this story stays quiet...

But that's why it's crucial for you to watch this presentation —

Because once Wall Street sinks its teeth in...

The first mover advantage will melt away as fast as a snowflake on a heated window...

If you've ever wanted to get in on a ground-breaking technology BEFORE Wall Street goes hyperbolic...

Please pay close attention.

You might want to turn off your phone and take notes.

Because in the next few minutes, I'm going to show you exactly how you could position yourself to cash in on this massive opportunity.

But before I do, you're probably wondering...

Why Should You Listen to Me?

My name is James Altucher...

And if my name sounds familiar,

It might be because you've seen me on CNBC, Fox, or The Street.

A Simple Way to Beat Hedge Funds

By James Altucher
Feb. 11, 2010 2:02 pm ET

I once met with representatives of a very wealthy family from Switzerland. You know how people say, If you had taken $10 and compounded it from 1700 on, you'd have a zillion dollar by now? Well, thiswas the type of family that had been compoundingits wealth since the 1300s. Many families like this have ungodly amounts of wealth stashed away.

And although most people know me as an author from my books and news articles...

Truth is... earlier in my career I worked as both hedge fund manager & venture capitalist in New York City.

I managed and oversaw multi-million dollar portfolios of some of the world's wealthiest people.

I'm talking in the hundreds of millions.

And my specialty —

Was to find little known companies — way off Wall Street's radar - that were about to pop in price.

A year after I launched my website for picking stocks, it was named among **Time Magazine's 50 Best Websites.**

And I myself have seen success, too!

Like the 5,700% gain I made as an early-stage investor in the social media group Buddy Media between 2007 and 2012.

Or the 3,780% I made from 2009 to 2015 as an angel investor on another little known startup called Ticketfly.

Now, I don't tell you this to brag, but to show how certain strategies helped me grow as an investor.

If you're looking for the chance to find 100%, 200%, 500%, and even 1000% trades over time...

The first thing you've got to do is...

IGNORE the mainstream media!

The talking heads you see on TV are clueless to what's *actually* going on...

Most often... TV reporters are just looking for ratings and could care less if their picks make their viewers money.

Case in point...

CNBC Tried to Humiliate Me... I Got the Last Laugh

Back in 2007 Facebook was growing in popularity and about to hit mainstream...

And while the media convinced the world Facebook was just a fad... and nothing to waste your time on...

I knew better.

See, through my contacts in Silicon Valley...

I knew Facebook was at the beginning of a massive run.

But when I went on CNBC and predicted it would hit $100 billion...

The host actually laughed in my face.

Take a look at the short clip below and you'll see...

Worldwide. First in Business Worldwide. First in Business World
First in Business Worldwide. First in Business Worldwide. First in

Today, we all know Facebook is worth more than $745 billion...

And those who had bought when this IPO'd in 2012 would be up over 400%.

Or what about the time...

I called Dow 20,000

Although it seems obvious now...

Back in 2011, the market gurus were convinced we were on the precipice of a giant crash of 20% or more...

And while we were sitting at 12,000...

All the talking heads on TV told the world we were set to go below 10,000.

Of course, I knew this was wrong...

But when I went on TV and called Dow 20,000 within 18 months... they all thought I was insane...

6/06
FAST MONEY
ALTUCHER: DOW TO HIT 20,000
CNBC CNBC CNBC CNBC CNBC
FIRST IN BUSINESS WORLDWIDE

Fine it didn't happen in 18 months... but with markets now hovering over 30,000...

Who looks crazy now?

Now I don't show you this to brag but to prove...

The media is clueless when it comes to discovering new companies and new technologies about to dominate the market.

But if you think those predictions were good...

Just watch...

What I'm going to show you today could be *much bigger* than that...

In fact, what I'm about to share with you is the biggest opportunity in my career.

Let me explain...

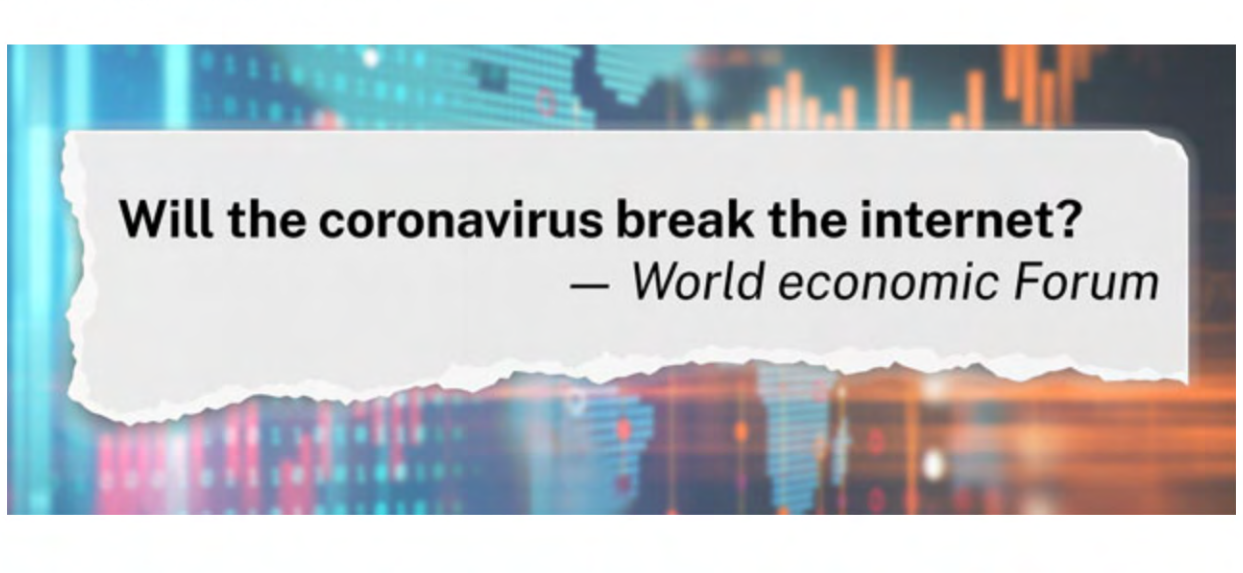
Right now, the world is facing a huge problem very few want to talk about...

Our internet is straining under the pressure.

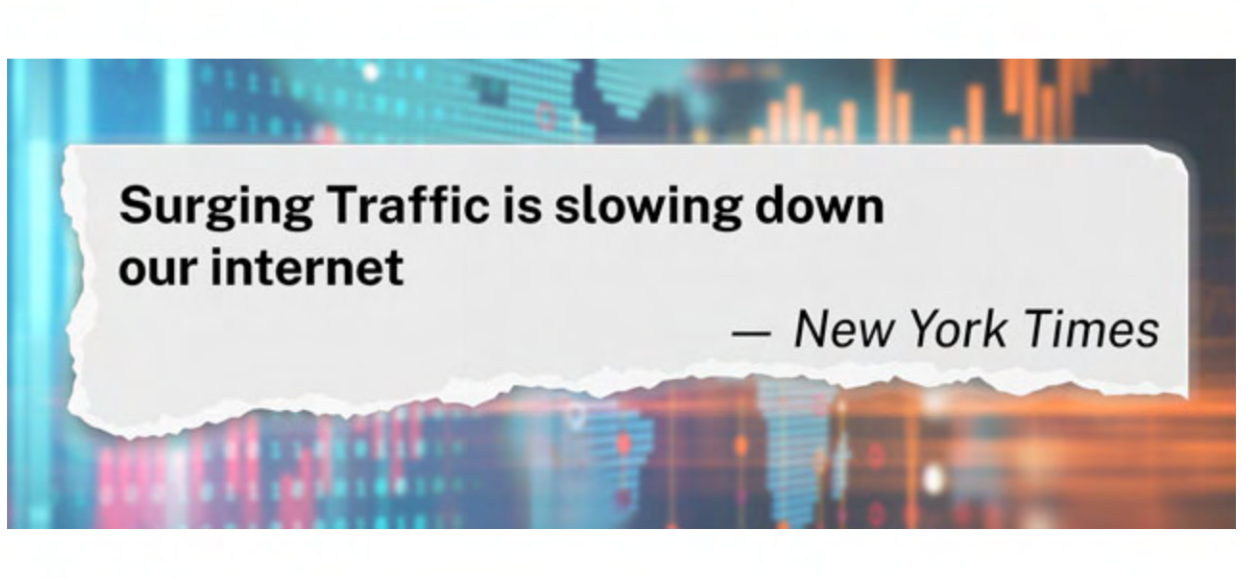
Thanks to the increase in internet usage due to Covid-19...

The internet infrastructure as we know it - is being pushed to the limit.

And the world is getting worried



Will the coronavirus break the internet?
— World economic Forum



Surging Traffic is slowing down our internet
— New York Times

To make matters worse...

The need for internet services is projected to almost double in the coming 10 years...

Unless our current internet infrastructure is massively overhauled...

There's little chance it will be able to hold up.

That's why investors are so excited about Bezos's breakthrough... and what it means for the industry as a whole.

Not only will this breakthrough be equipped with the latest technology... it is rethinking the entire internet from the ground up...

Amazon's Internet Explained

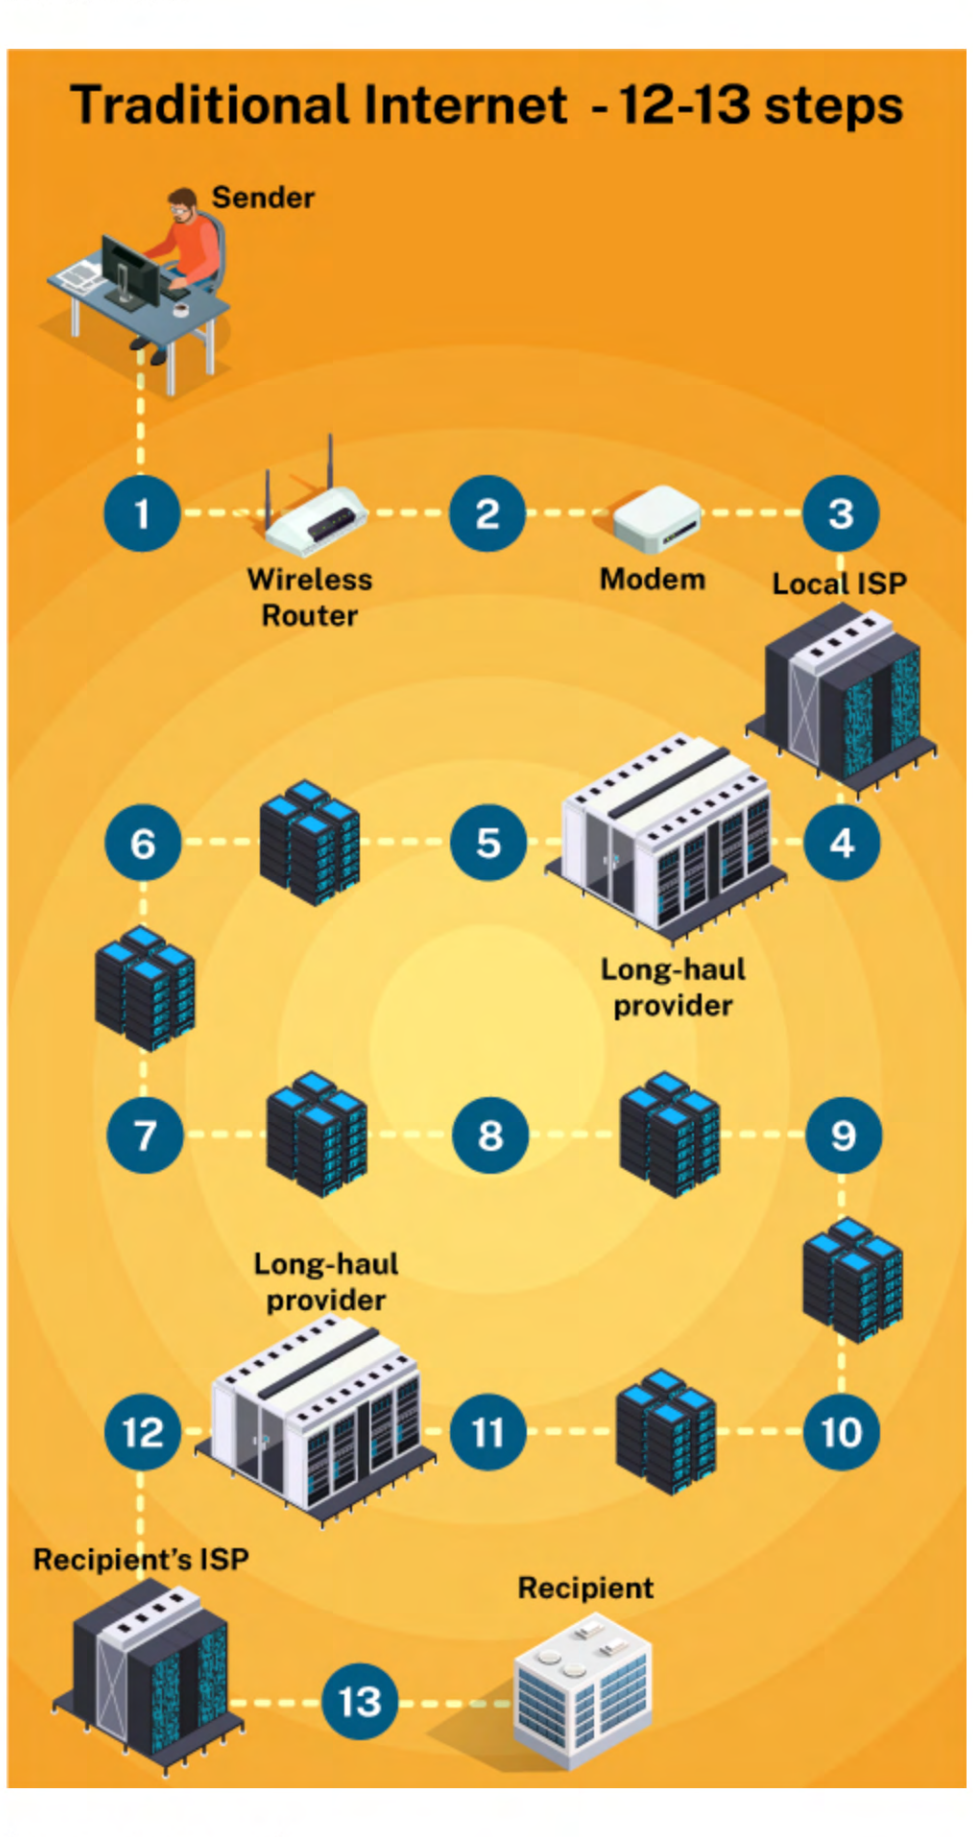
Here are the three ways "StarNet" will be radically different from existing technology...

DIFFERENCE #1. No More Cable Headache

See, your current internet is a combination of two things

1. Old School technology of cables and wires
2. New wireless technology like Wi-Fi

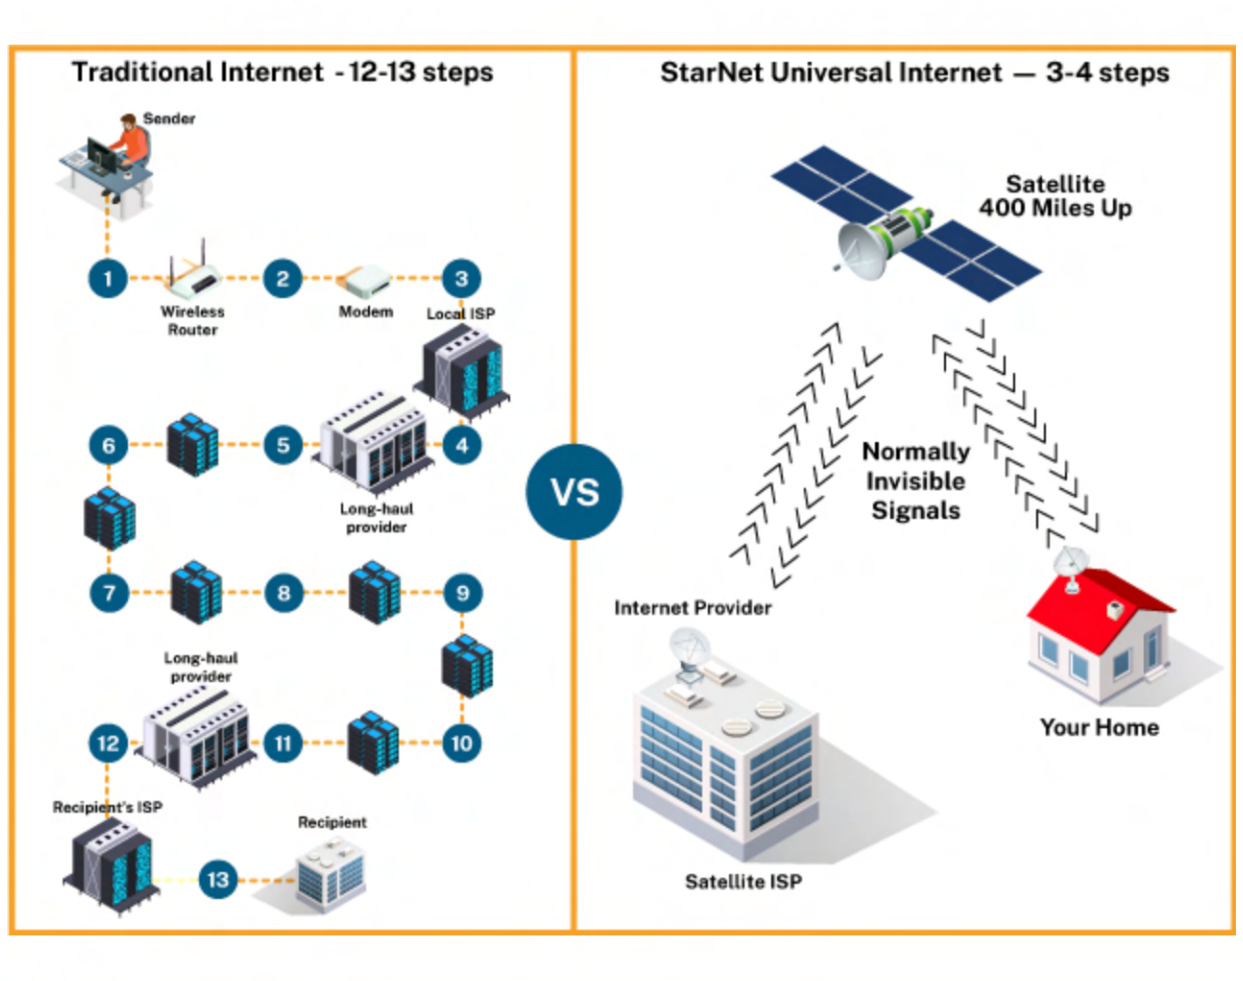
This current combination takes many steps, slows down the internet and makes it spotty, and increasingly unreliable.



Traditional Internet - 12-13 steps
Sender
1
Wireless Router
2
Modem
3
Local ISP
4
5
Long-haul provider
6
7
8
9
Long-haul provider
10
11
12
Recipient's ISP
13
Recipient

But that's where Amazon comes in...

Once the Universal Internet ("StarNet") is up and running... it will beam down the internet wirelessly to your homes and offices and seamlessly merge with your Wi-Fi.



Traditional Internet - 12-13 steps
Sender
Wireless Router
Modem
Local ISP
Long-haul provider
Long-haul provider
Recipient's ISP
Recipient
VS
StarNet Universal Internet — 3-4 steps
Satellite 400 Miles Up
Normally Invisible Signals
Internet Provider
Your Home
Satellite ISP

In other words...

No cable. No multiple internet providers. No cell towers. No mess.

Just fast, reliable, unlimited internet. With 4K video quality. Beamed through the air... directly to your device.

DIFFERENCE #2 — World Wide Immediate Access

Unlike your current Internet, "StarNet" will eventually be available everywhere.

Since "StarNet" will be coming from space and wouldn't need cables or cell towers to work, it could reach you *wherever* you are.

With "StarNet," whether you are at home... at the office... walking down Rodeo Drive... hiking in the Rockies... in the middle of the Atlantic... marooned on a deserted island... or on expedition in the Antarctic...

You'd have access to the internet.

Just so you know... The satellite deployment is being planned in stages.

This way you don't have to wait for all the satellites to launch before accessing "StarNet".

Of course, the initial satellites will not cover the full globe... But once all the satellites are up...

You'll never have to worry about internet connectivity even if you are in a remote cabin in the middle of nowhere... or hiking up in the mountains.

You can always access the internet.

DIFFERENCE #3 Way Cheaper

And this is the most important difference.

You might never again have to shell out ridiculous fees for your internet.

It's early days yet, but judging by what Amazon has done in the past with similar products... "StarNet" could be a steal.

It could be as low as $8.99 per month...

Or even better... It could be FREE.

Imagine that. Free Internet!

That's right.

As I mentioned before... Mr. Bezos has deep pockets... and he will go to great lengths to capture market share and one-up on the competition.

Just like he did with Amazon TV.

At the time of its launch, Amazon TV had to fend off stiff competition from Netflix, Apple TV, and other players.

So, Mr. Bezos made Amazon TV Free with Prime subscription.

It was a huge gamble. But it paid off.

Even when he launched Amazon Prime, Jeff didn't care that he lost $11 per member annually.

The money didn't matter.

All that mattered was that Amazon capture market share and a loyal customer base.

It's the same with what we're calling "Sky-Fi."

Mr. Bezos knows that "StarNet" could increase Amazon's reach like never before...

So, I wouldn't be too surprised if he under-cuts the competition completely and delivers your internet at "no additional cost"

In fact, I'm 100% sure that with Amazon's new technology —

You won't pay any middlemen... with hidden fees.

You'll simply have one flat price.

This breakthrough alone could save US households as much as $2,000 every year in Internet fees.

And considering other internet innovations produced exceptional gains of 2558% in two years, and over 285,000% in sixteen years...

There's no telling how much money this tech breakthrough could deliver.

But here's an important part I want you to underline —

As with all tech revolutions, there are going to be winners.

Companies who take Amazon's tech and thrive to make untold billions in profit...

But unfortunately, there will also be some losers – Traditional internet providers.

You see, as "StarNet" could promise to provide a far superior service...

At a fraction of the cost...

Internet and cable providers like Verizon, Comcast and AT&T...will be in serious trouble.

Now while my prediction could be off the mark, I truly believe...

"StarNet" will sound the death-knell for Internet providers

For years, cable companies have been able to get by providing terrible service with a subpar product...

You might find this hard to believe... but the greatest country in the world... the country that invented the internet, has among the poorest internet connection.

Americans enjoy an average connection speed of 21.3 Mbit/Sec.

That's slow. Very slow.

To put it in perspective... we are not in the top 10 countries when it comes to Internet connection speed.

Heck, we are not even in the top 25.

Countries like Albania, Taiwan, and Bulgaria have better speeds.

Even bankrupt nations like Greece enjoy better internet connection speeds.

It's a shame!

To make matters worse... Americans pay among the highest fees to the internet providers.

Nearly double that of what folks in London, Paris and Seoul pay.

It's criminal.

But the end of those overpaying days is in sight...

Right now — Jeff Bezos and his team have taken aim at the entire industry...

And for companies like AT&T... Verizon... and Comcast things are about to get very ugly.

I'll tell you more about that in a minute...

But by now you may be asking...

> *"What about 5G? I thought that was supposed to solve all these problems?*

5G LIE Exposed

Well, here's the truth the media doesn't want to talk about...

While the media has anointed 5G as the latest "hot thing"...

There's a massive problem with 5G no one has been able to figure out...

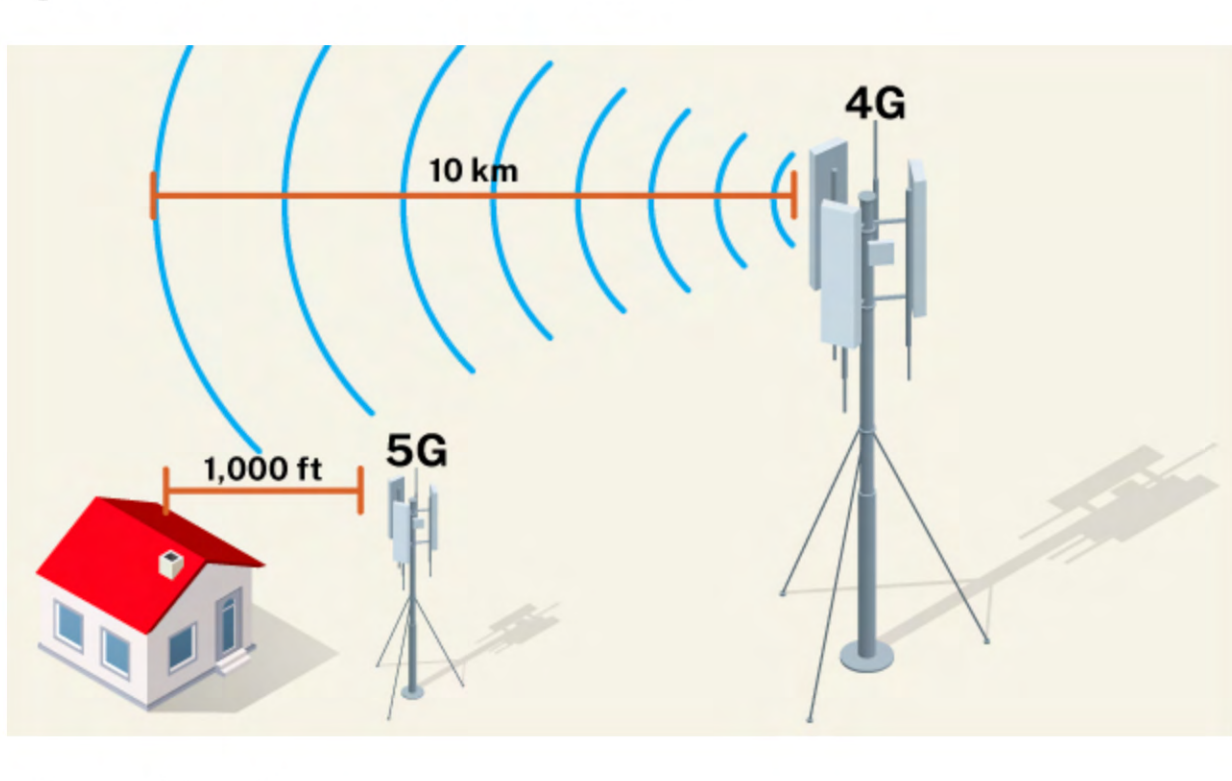
See, 5G uses millimeter waves, which are a lot shorter than the wavelengths 4G uses.

Without getting too technical... shorter wavelength means 5G can carry a lot of data much faster than 4G.

But it also means 5G towers have a much shorter range.

To give you an idea, traditional cell towers had a range of around 10 miles.

But the range of 5G towers is 1000 feet at best.



4G
10 km
5G
1,000 ft

Do you see the problem?

For every single traditional cell tower, we would need at least 2500 5G towers.

According to a report made by a Google employee for the DoD (Department of Defense)...

To provide 5G to the entire country, we will need at least 13 million of these 5G transmitters.

That's like having a 5G transmitter on every second street light pole in the country.

As you can imagine, putting up so many 5G transmitters will cost hundreds of billions of dollars... maybe even more.

Not to mention the regular maintenance costs for each of those towers.

It all adds up...

If you have 5G, it'll likely send your phone bill further up...

On top of the $132 you're probably already paying now.

But knowing Bezos way of killing the competition…

I predict that he might offer a Universal Internet plan… which would offer a far superior product…

With no blackouts…

No dropped calls…

No coverage restrictions…

And for a fraction of the price…

It's easy to see why I say 5G will become obsolete.

But there is something else you need to know.

Universal Internet: An integral part of Bezos's Grand Plan

Many people look at this situation and wonder…

Amazon is already the dominant player in retail and worth over $1.5 Trillion…

Why would Bezos distract himself with developing a whole new internet?

Why not just focus on Amazon and improve its own business model?

Good question…

If you look strictly at the numbers… it doesn't necessarily make sense.

But if you've followed Bezos's career you know he does nothing haphazardly…

Everything Bezos does is a part of a grand scheme…

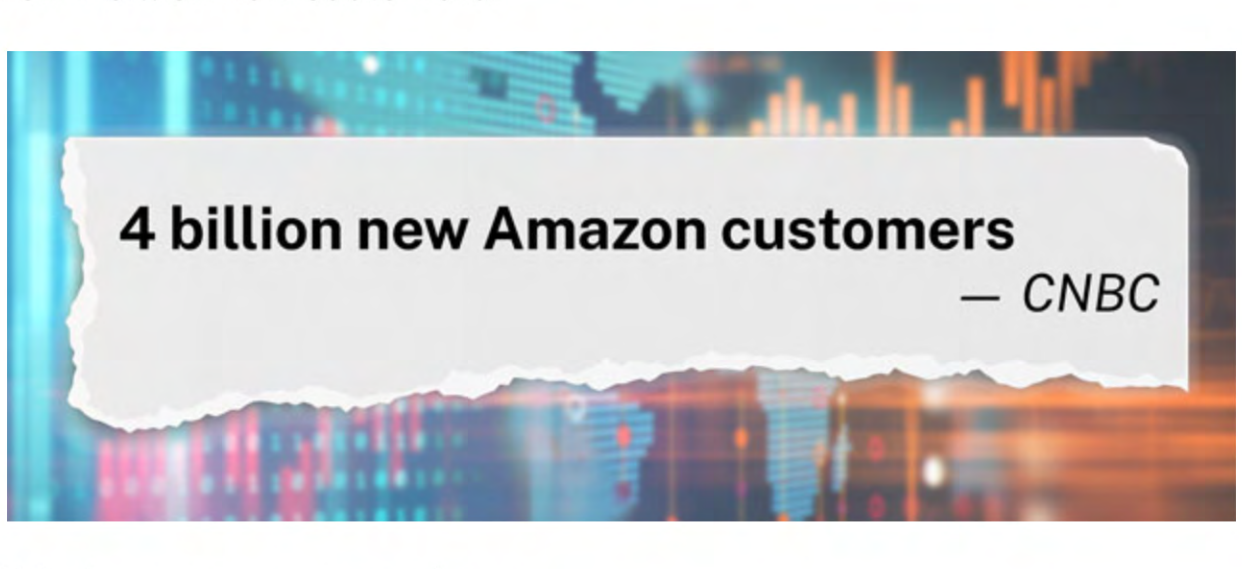
Strategically… it's a check mate move to dominate the world's retail game… and more…

Consider —

As of now Amazon has 310 million customers worldwide.

But once "StarNet" is set up, Amazon's customer base could explode exponentially.

Chad Anderson, CEO of Space Angels, went on record and said this breakthrough will give Amazon 4 billion new customers.



That's ***12X*** their current customer base…

And if we consider right now Amazon is valued at $1.5 trillion…

What would twelve times more customers mean to their valuations?

$2 trillion?

$3 trillion?

Or closer to $5 trillion?

That's more than the GDP of almost every country on earth.

Now are you starting to see why experts are so excited about this opportunity?

And in response to what happens on April 26th, I predict the whole thing could start going into overdrive.

But let me get more specific…

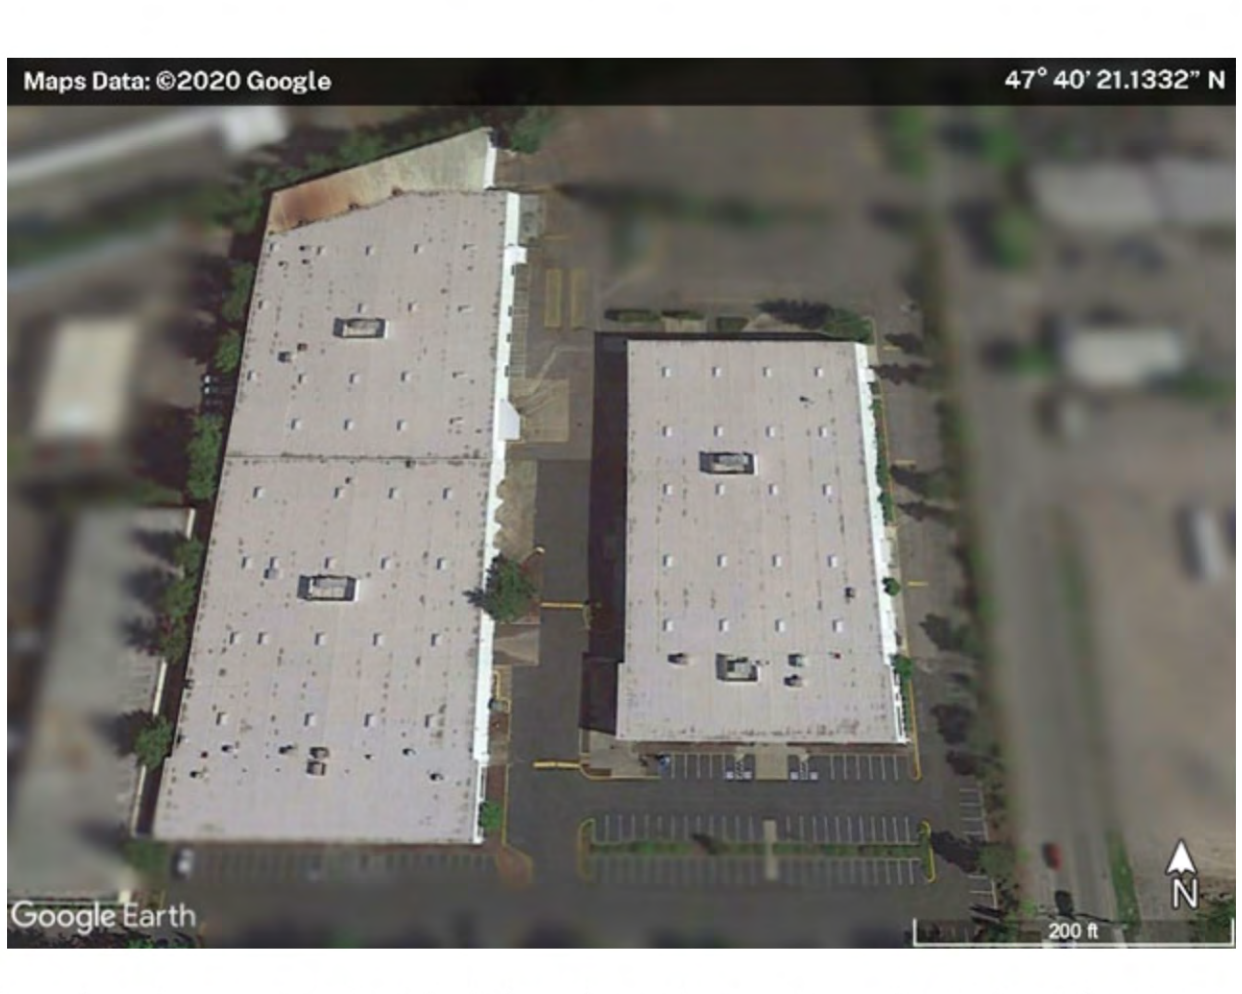
Up until now I've just given you a broad idea of what's about to happen.

Let me give you some irrefutable facts so you see the extent to which Bezos is backing his bet.

Reason To Believe #1:
All the ground work is already in place —

As I showed you earlier —

Amazon has already leased two buildings with approximately 219,500 sq. ft. for this new project.



They're also planning on moving their headquarters — away from Seattle…to possibly be closer to this project.

But that's not all…

Jeff Bezos went on an engineer hiring spree starting in 2019…

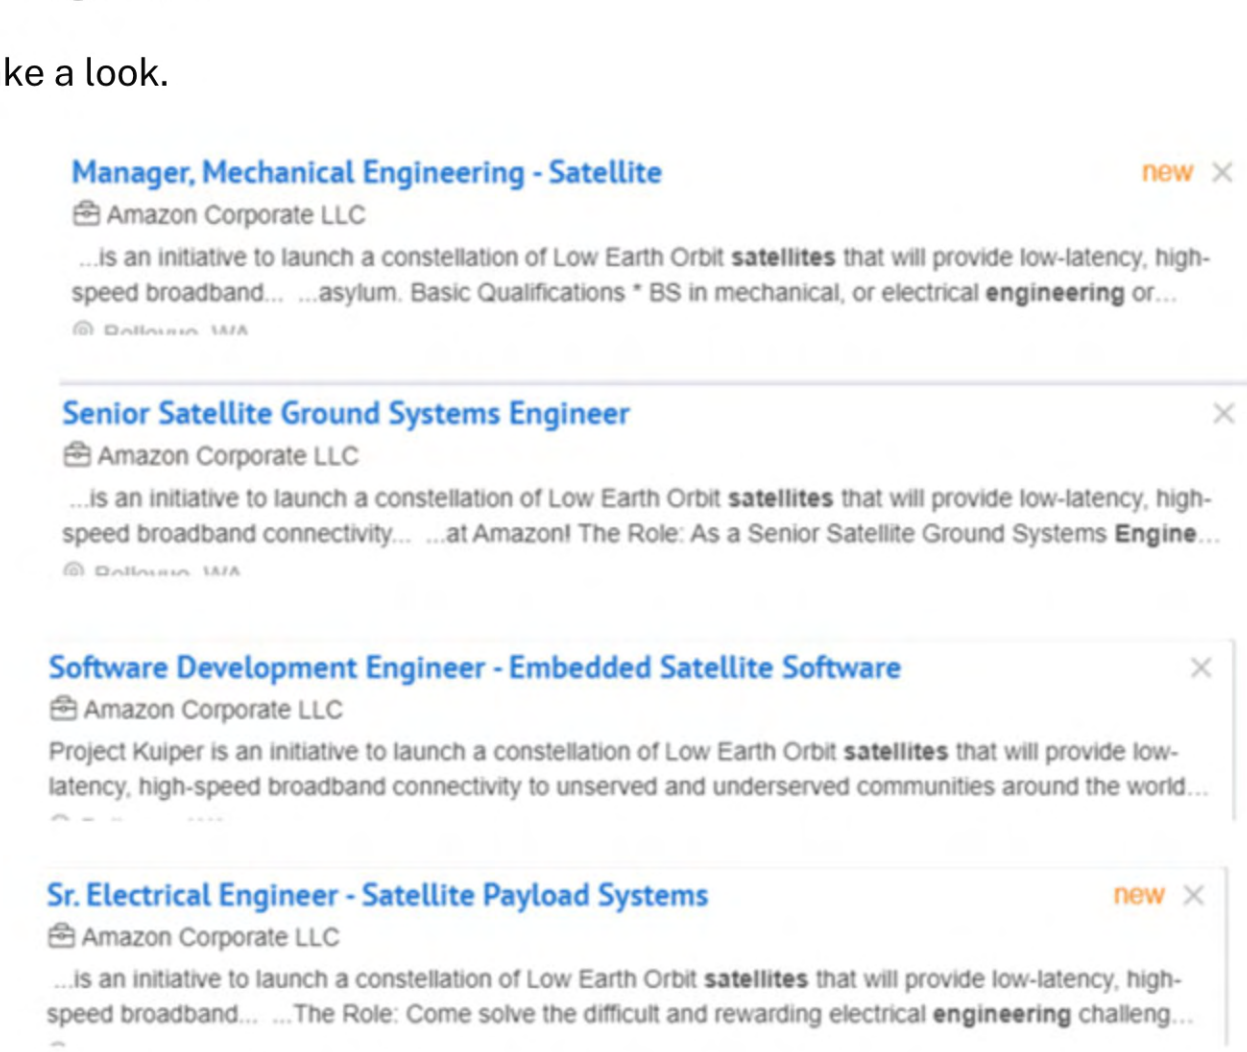
Including bringing on Rajeev Badyal — a former vice president at Elon Musk's SpaceX.

Rajeev Badyal was in charge of Musk's Satellite program… which is similar to "StarNet."

Jeff also hired Mark Krebs, an aerospace engineer who played a key role in developing the first two prototype satellites for SpaceX.

In addition, LinkedIn and other popular job sites list hundreds of Amazon Jobs related to Satellite Engineers.

Here, take a look.



Manager, Mechanical Engineering - Satellite new

Amazon Corporate LLC

…is an initiative to launch a constellation of Low Earth Orbit **satellites** that will provide low-latency, high-speed broadband… …asylum. Basic Qualifications * BS in mechanical, or electrical **engineering** or…

Senior Satellite Ground Systems Engineer

Amazon Corporate LLC

…is an initiative to launch a constellation of Low Earth Orbit **satellites** that will provide low-latency, high-speed broadband… …The Role: Come solve the difficult and rewarding electrical **engineering** challeng…

There are hundreds more like these… all clearly mentioning Low Earth Orbit (LEO) Satellites.

In short Amazon is targeting very specific engineers… for a very specific reason.

And my next proof will show how serious Amazon is about "StarNet"

Reason To Believe #2:
Patent Application for Unique Energy-efficient Satellite Launch System

Amazon engineers have already developed (and patented) a satellite-launching system to catapult their LEO satellites into low orbit.

It's a one-of-its kind energy-efficient launch system that utilizes the principles of whip dynamics.

While this may sound like jargon to you…

This is what's going to differentiate "StarNet" from the competition.

You see, the most expensive part of satellites is putting them in orbit.

In fact, the launch costs can be 50X to 400X the cost of the satellite itself.

And that is why the "StarNet" satellite launch system is so crucial.

While the competition uses expensive rockets to launch their satellites…

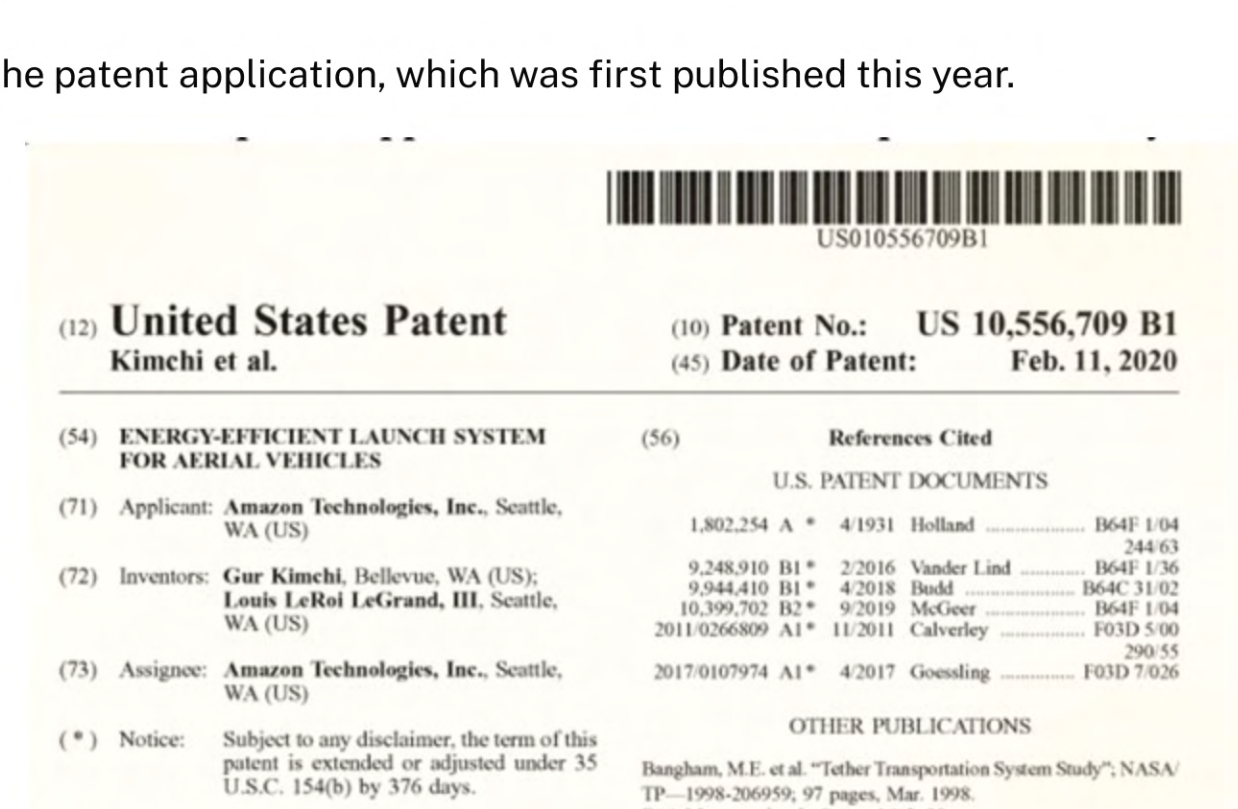
This system uses no rockets.

This gives Amazon a HUGE advantage to deliver the most advanced internet…

At potentially the lowest price possible…

Which is why… before the competition can copy their idea… Amazon went ahead and patented it.

Here is the patent application, which was first published this year.



US010556709B1

(12) **United States Patent**
Kimchi et al.

(10) **Patent No.: US 10,556,709 B1**
(45) **Date of Patent: Feb. 11, 2020**

(54) **ENERGY-EFFICIENT LAUNCH SYSTEM FOR AERIAL VEHICLES**

(71) Applicant: **Amazon Technologies, Inc.**, Seattle, WA (US)

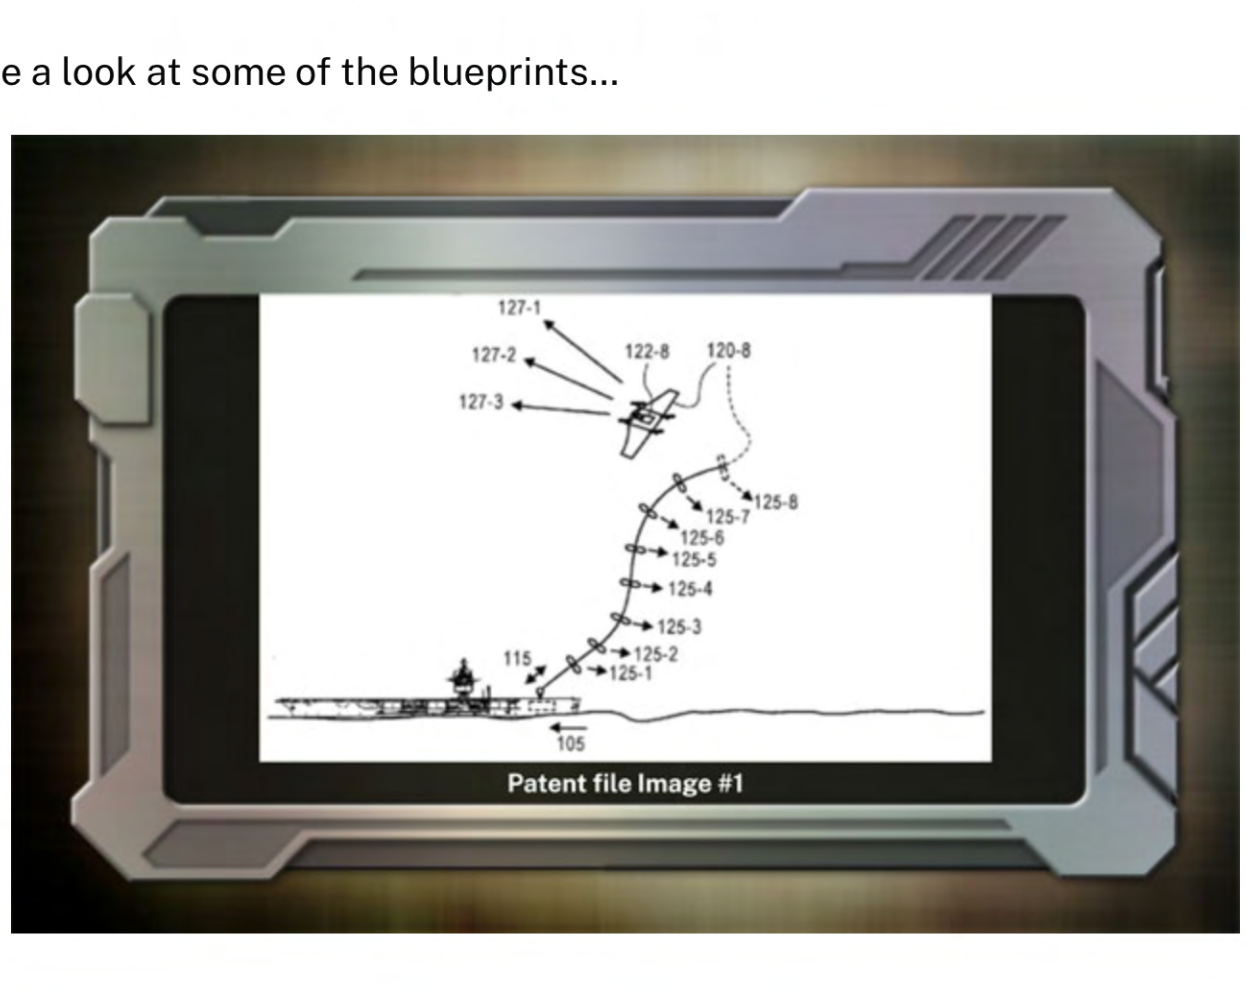
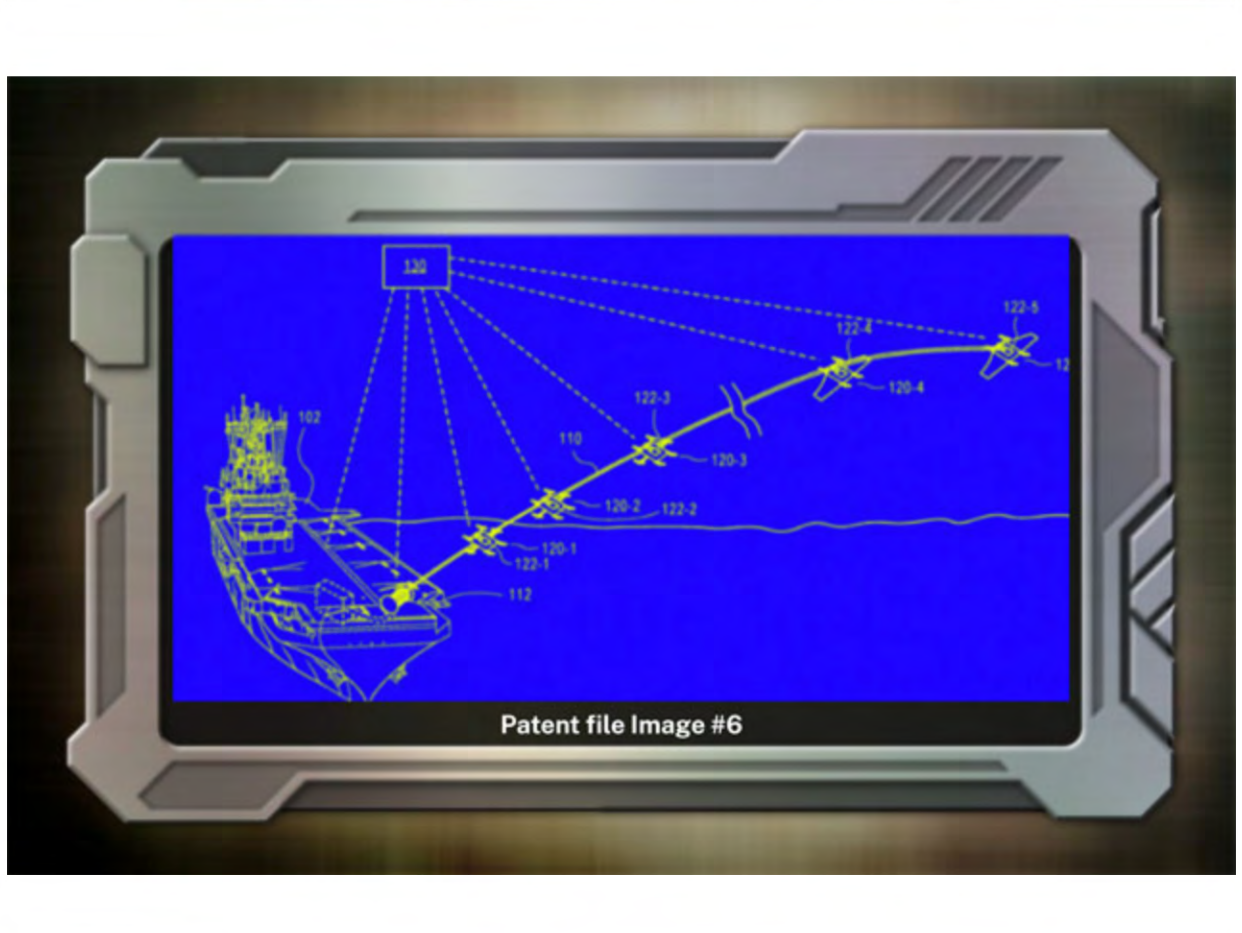
(Continued)

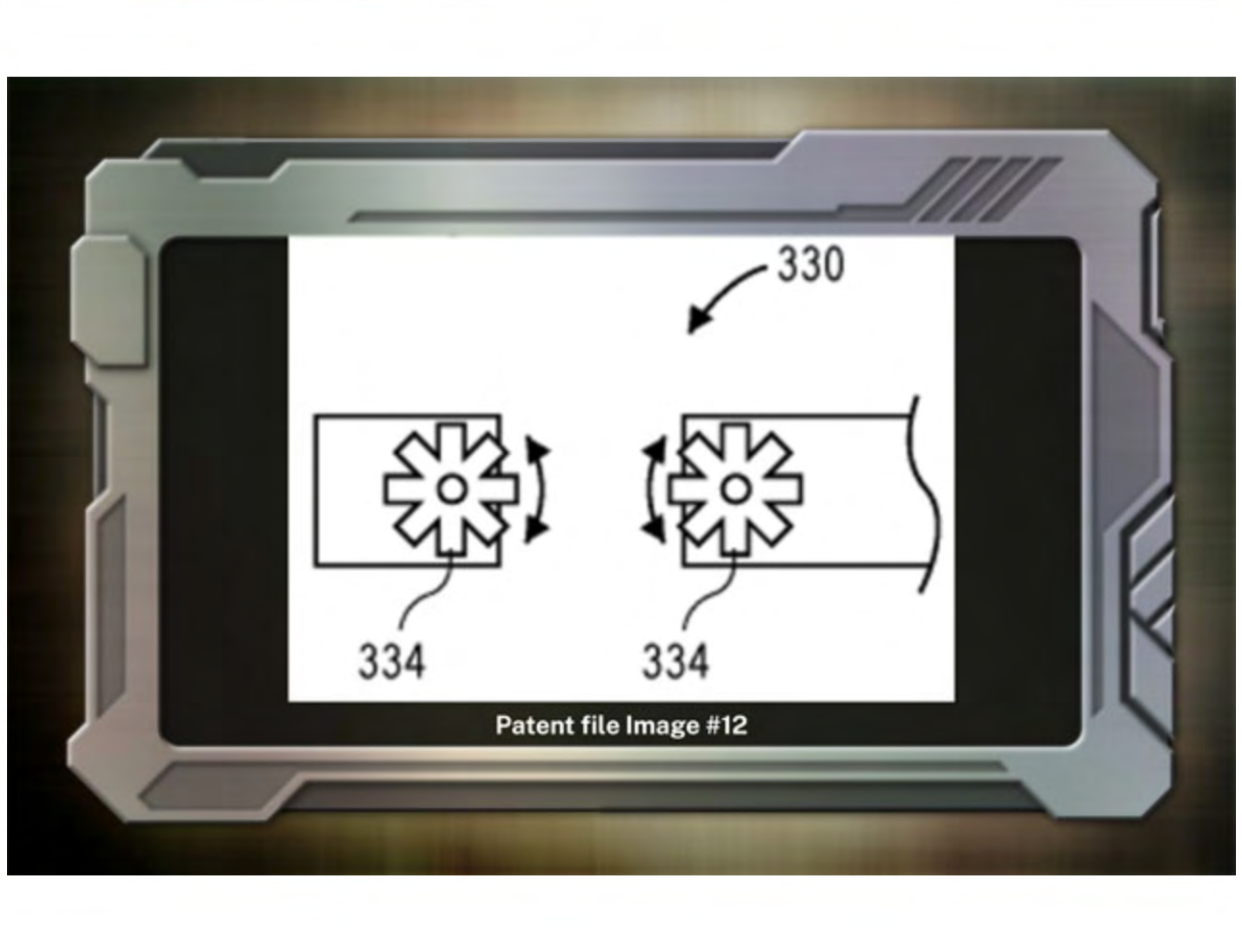
The patent application lays out an unusually detailed description of the system.

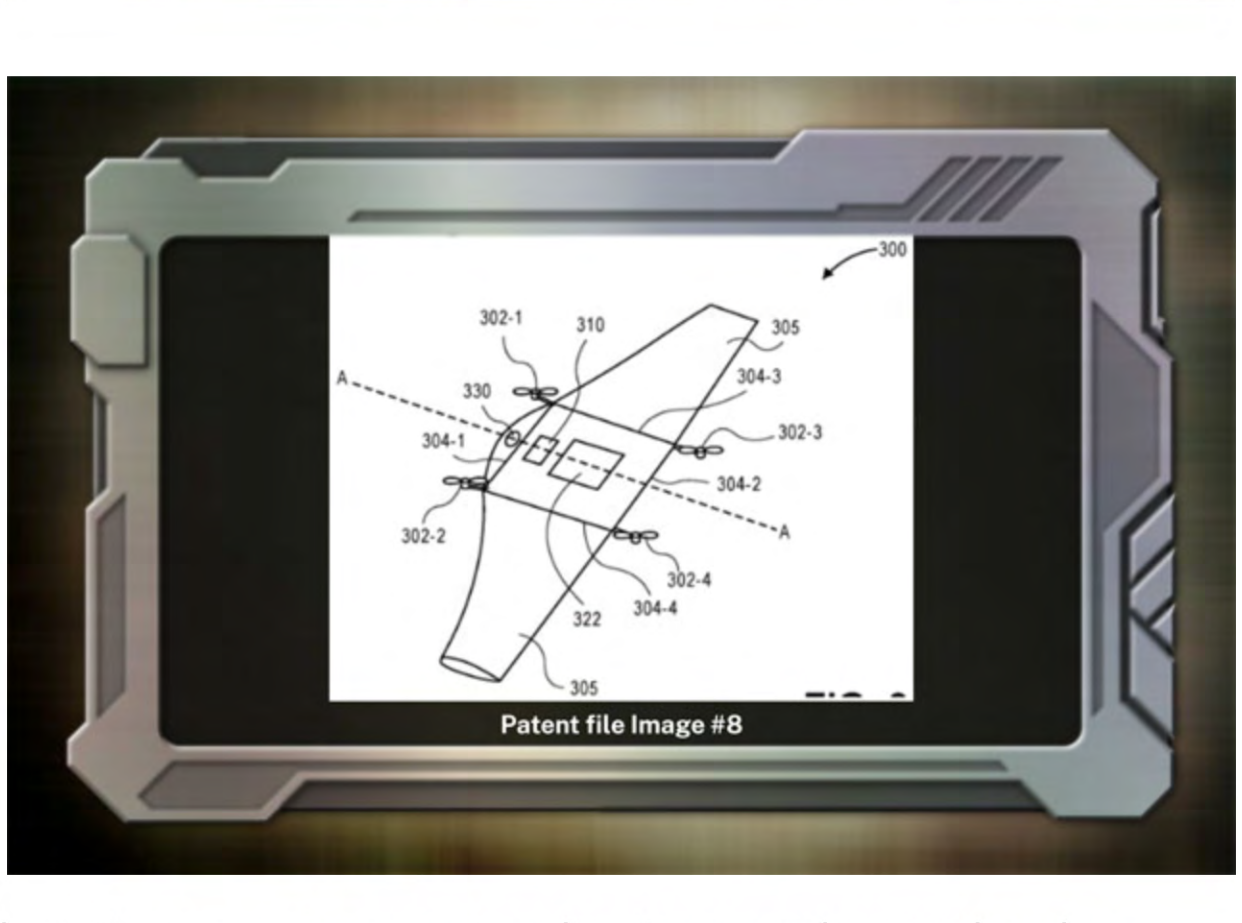
The details go right down to the gear teeth in the mechanism.

Here, take a look at some of the blueprints…









I must tell you, I've seen many patent applications over the past decade.

But I've never seen one that is so thorough and detailed…

Right from the nuts and bolts of the system, all the way to the orbital transfer process.

The patent not only explains the entire flow diagram of the launch of the satellite, but also the launch reload process.

As you can see here.

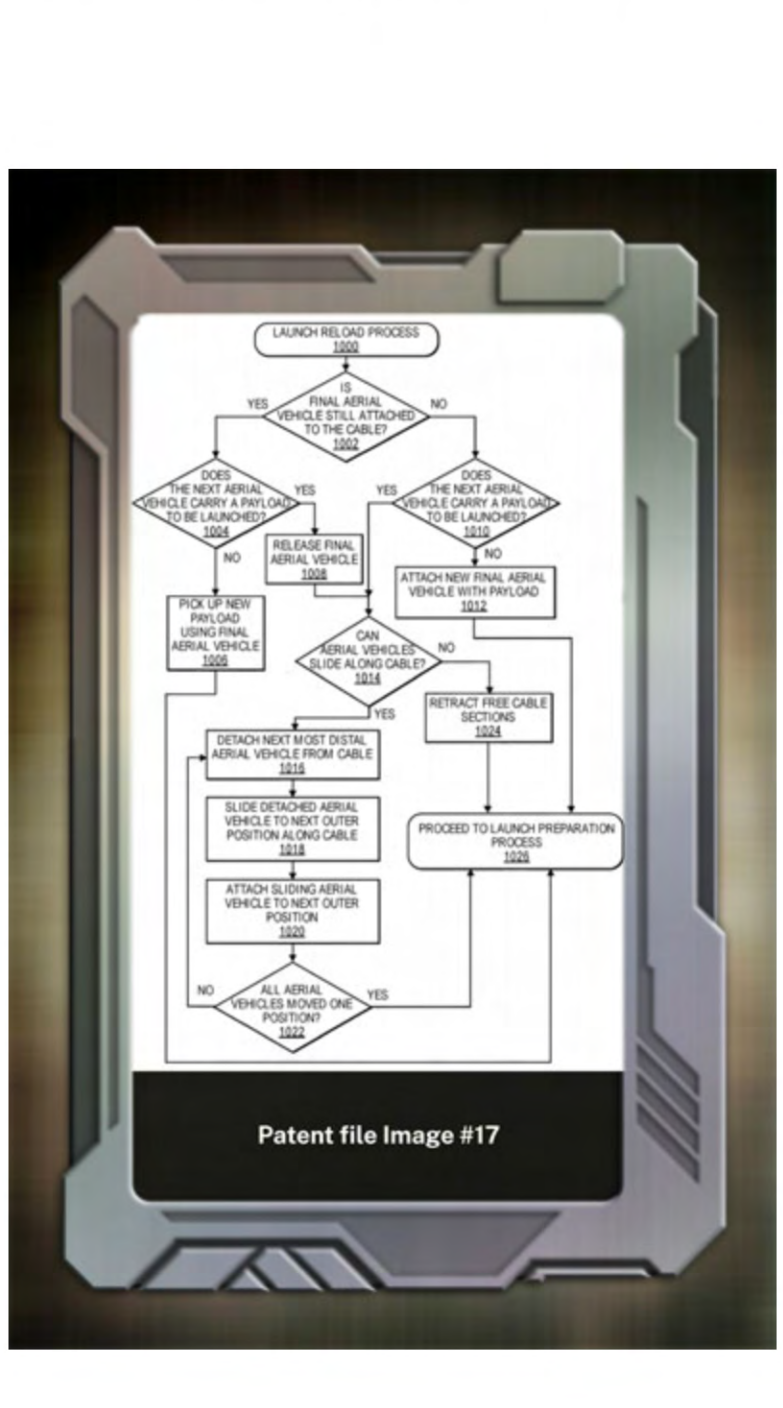
Patent file Image #3



It's incredibly detailed.

Bottom line —

Amazon plans to spend billions of dollars perfecting technology that'll re-write the internet as we know it…

But let me slow down here and emphasize something very important —

Up until now we've drilled down into the nitty gritty of this breakthrough…

We've talked about research sites, technological data, and even patents…

But here's the thing…

As any inventor will tell you…

The technology is only one part…

If you truly want to scale out massive infrastructure you've got to have legal approval…

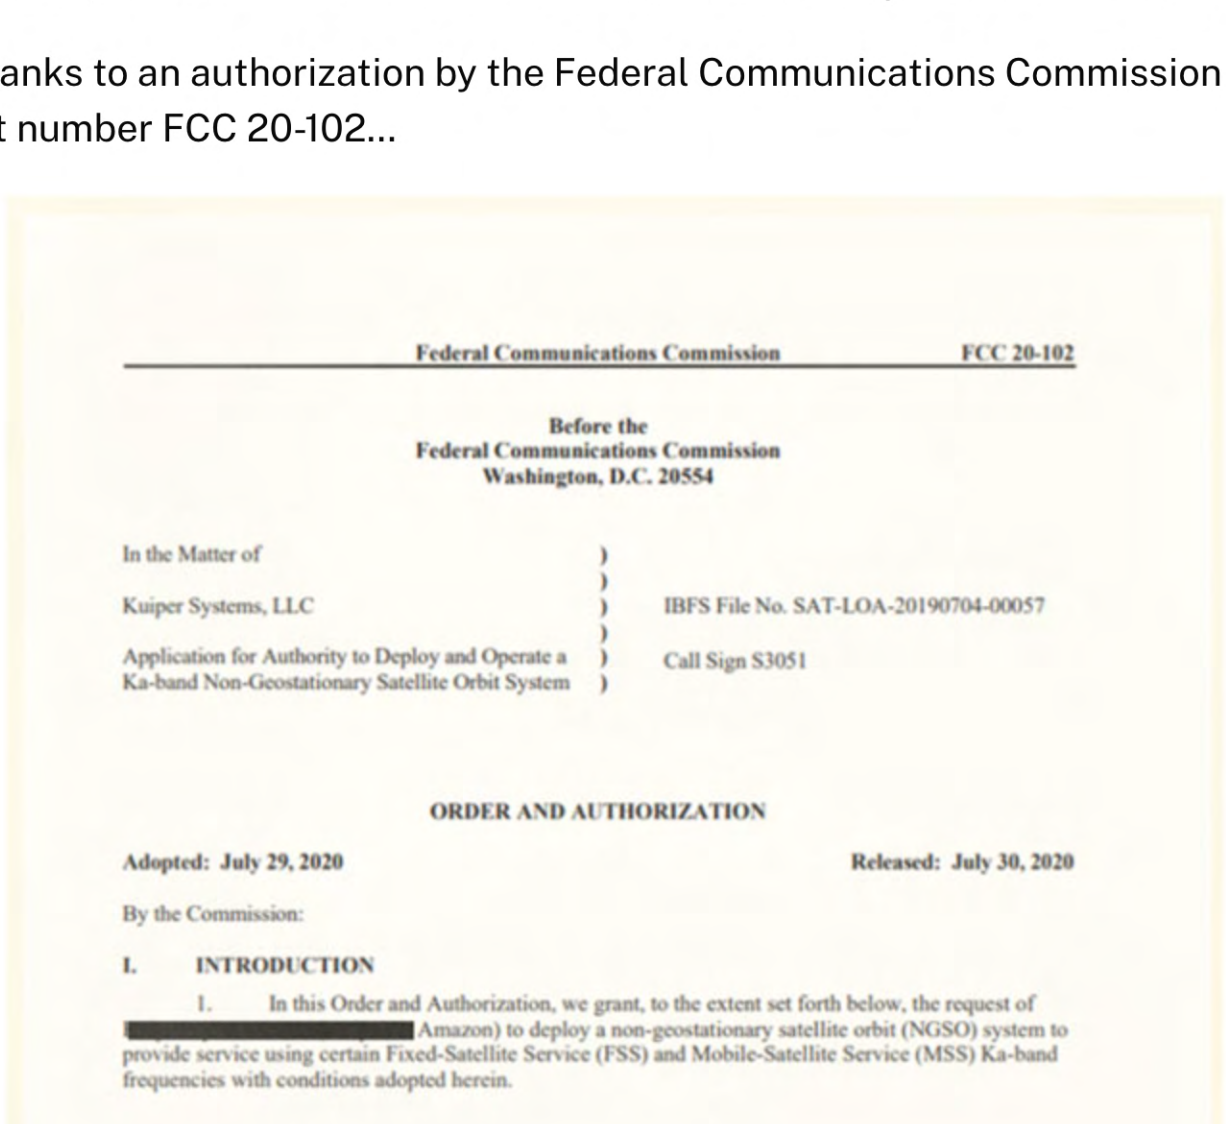
And those permits and approvals can take years or even decades to get done…

But for Amazon they're WAY ahead of the game…

Reason To Believe #3:
A Unanimous Government Approval

In July of 2020, Amazon's "StarNet" won a unanimous 5-0 bipartisan vote in its favor.

In fact, thanks to an authorization by the Federal Communications Commission (FCC) document number FCC 20-102…



Federal Communications Commission FCC 20-102

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
Kuiper Systems, LLC) IBFS File No. SAT-LOA-20190704-00057
Application for Authority to Deploy and Operate a Ka-band Non-Geostationary Satellite Orbit System) Call Sign S3051

ORDER AND AUTHORIZATION

Adopted: July 29, 2020 **Released: July 30, 2020**

By the Commission:

I. **INTRODUCTION**

1. In this Order and Authorization, we grant, to the extent set forth below, the request of [redacted] Amazon) to deploy a non-geostationary satellite orbit (NGSO) system to provide service using certain Fixed-Satellite Service (FSS) and Mobile-Satellite Service (MSS) Ka-band frequencies with conditions adopted herein.

Amazon has the GO AHEAD to build and launch 3,236 satellites with the sole purpose of providing advanced internet to every corner of the earth.

In fact, the FCC has even put deadlines in the coming years for the first set of satellites…

And that means — for any company looking to compete with Amazon…

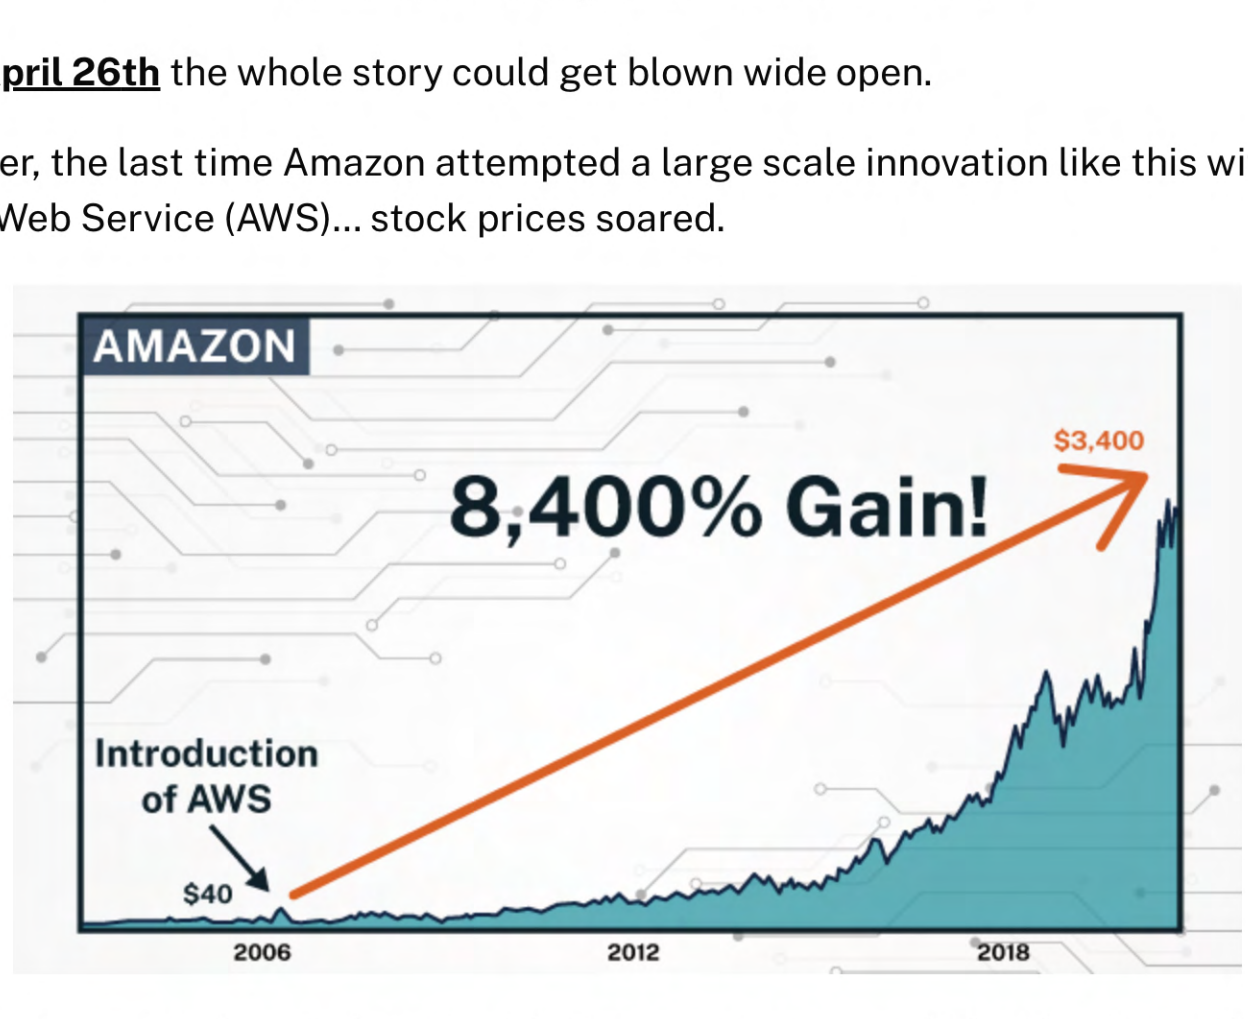
They're way behind the 8-ball.

As Warren Buffett says,

"You don't want to give Bezos a head start."

And on **April 26th** the whole story could get blown wide open.

Remember, the last time Amazon attempted a large scale innovation like this with Amazon Web Service (AWS)… stock prices soared.



Investors who got in then and stuck with Amazon were rewarded with a huge windfall…

And could've turned $10,000 into over $850,000.

While that's a great gain —

What we're about to see could dwarf that.

Keep in mind — AWS was a $35 billion opportunity —

But as you've seen —

This internet breakthrough could be worth hundreds of billions or even trillions of dollars in revenue to Amazon!

Needless to say, many people are going to have a once-in-a lifetime chance at becoming incredibly rich.

The only question is…

"Are you going to be one of them?"

But here's an important point I want to highlight…

While Amazon will definitely gain from "StarNet"… there will be a spate of smaller opportunities that will jump on the "Sky Fi" band-wagon…

And grow *much faster* than Amazon can ever hope to.

I'll explain this in greater detail in just a moment but first, it's critical you know…

If YOU want to maximize the Sky Fi opportunity you have to look beyond Amazon

Now don't get me wrong.

If you have over $3000 to buy one share of Amazon… you can certainly go out and buy shares of Amazon…

After all, once "StarNet" is up and running it could boost Amazon's business by hundreds of billions of dollars… or more.

But keep in mind…

Amazon's already a $1.5 trillion company…

So even as Amazon explodes and adds to it's bottom line…

You'll likely only see gains of 50%, 75% or 100%…over the coming years.

Nice returns —

But not necessarily life changing.

On the other hand —

History has shown-

If you're looking to maximize opportunities like this —

The real money is in finding smaller companies that will benefit off these massive technology shifts.

To show you what I mean, here are a few examples of how small companies rode the wave of success of big giants to become…

The real winners.

Remember Intel and IBM?

In the early 80s when personal computers were just beginning to take off (like the space industry today)…

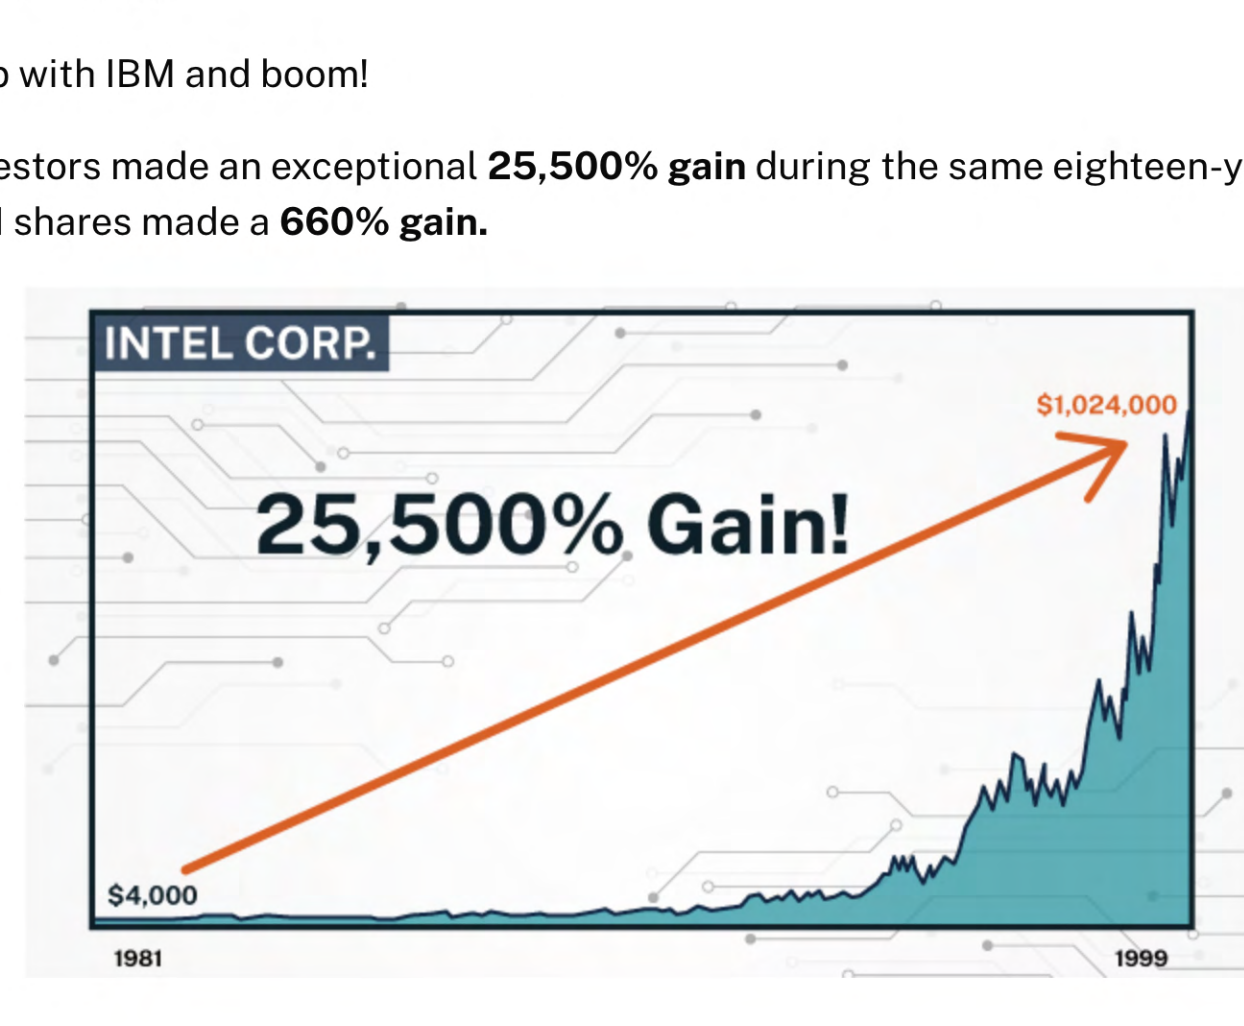
IBM was a giant in the world of computers.

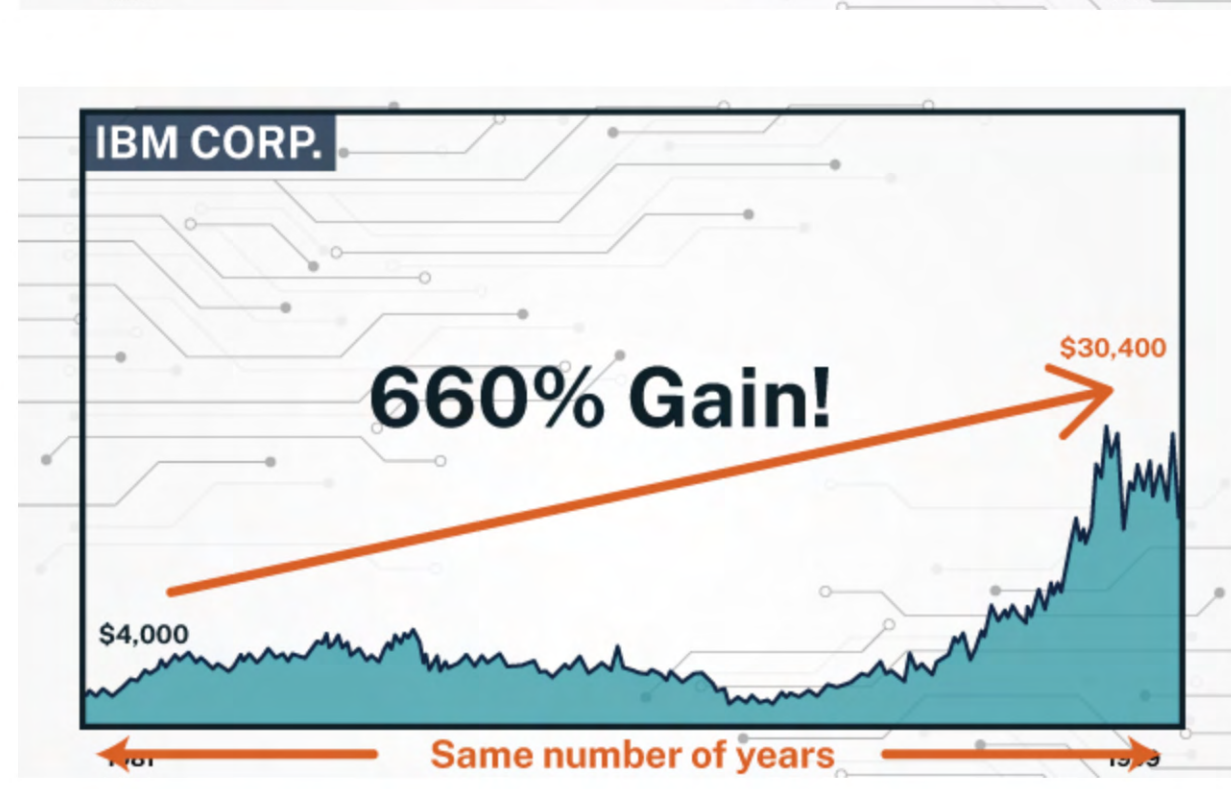
Intel was a nobody.

So, what did Intel do?

It tied up with IBM and boom!

Intel investors made an exceptional **25,500% gain** during the same eighteen-year period that IBM shares made a **660% gain.**





In other words, every $1,000 invested in Intel swelled to a whopping $256,000.

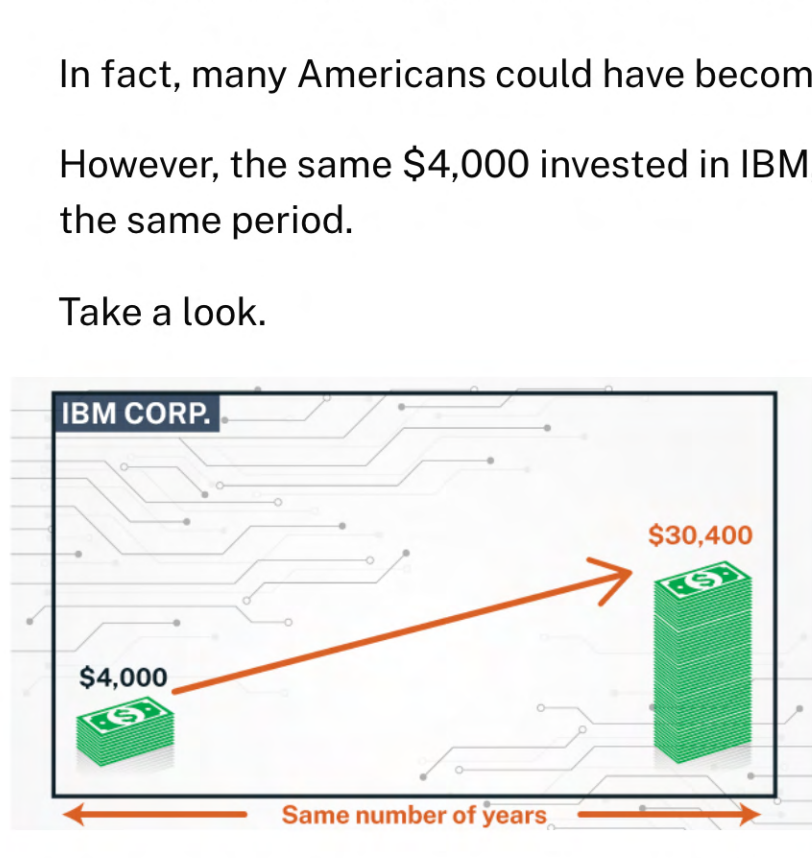
A modest $4,000 invested in Intel around the time it started linking itself with IBM…

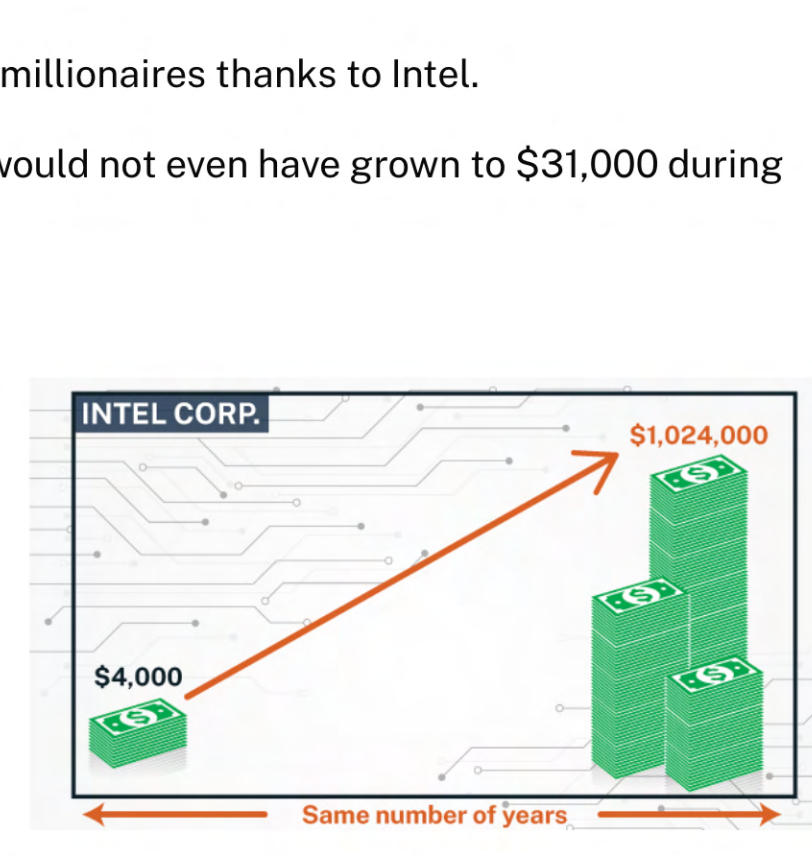
Would have turned into a million dollars.

In fact, many Americans could have become millionaires thanks to Intel.

However, the same $4,000 invested in IBM, would not even have grown to $31,000 during the same period.

Take a look.





That massive difference is because IBM lacked one important factor that Intel had.

A factor that is vital to a growth investor - Future Growth.

IBM (like Amazon today) had already grown to be a massive company.

IBM's big growth was already **behind** it.

And though IBM would continue to grow, it would be impossible to do it at the same pace as the small and nimble Intel.

Let me give you another more recent example based on the success of the iPhone.

After the first iPhone launch, Apple went up about **200%** within the next four years.

That's certainly not bad, of course…

But while Apple got the lion's share of revenue from iPhone, many suppliers and component makers also benefitted from the device.

And some of them made a fortune, much faster than Apple.

Pegatron is a small supplier that makes chips used in Apple's iPhone.

Before partnering with Apple, shares were dirt-cheap… trading at just $2.02.

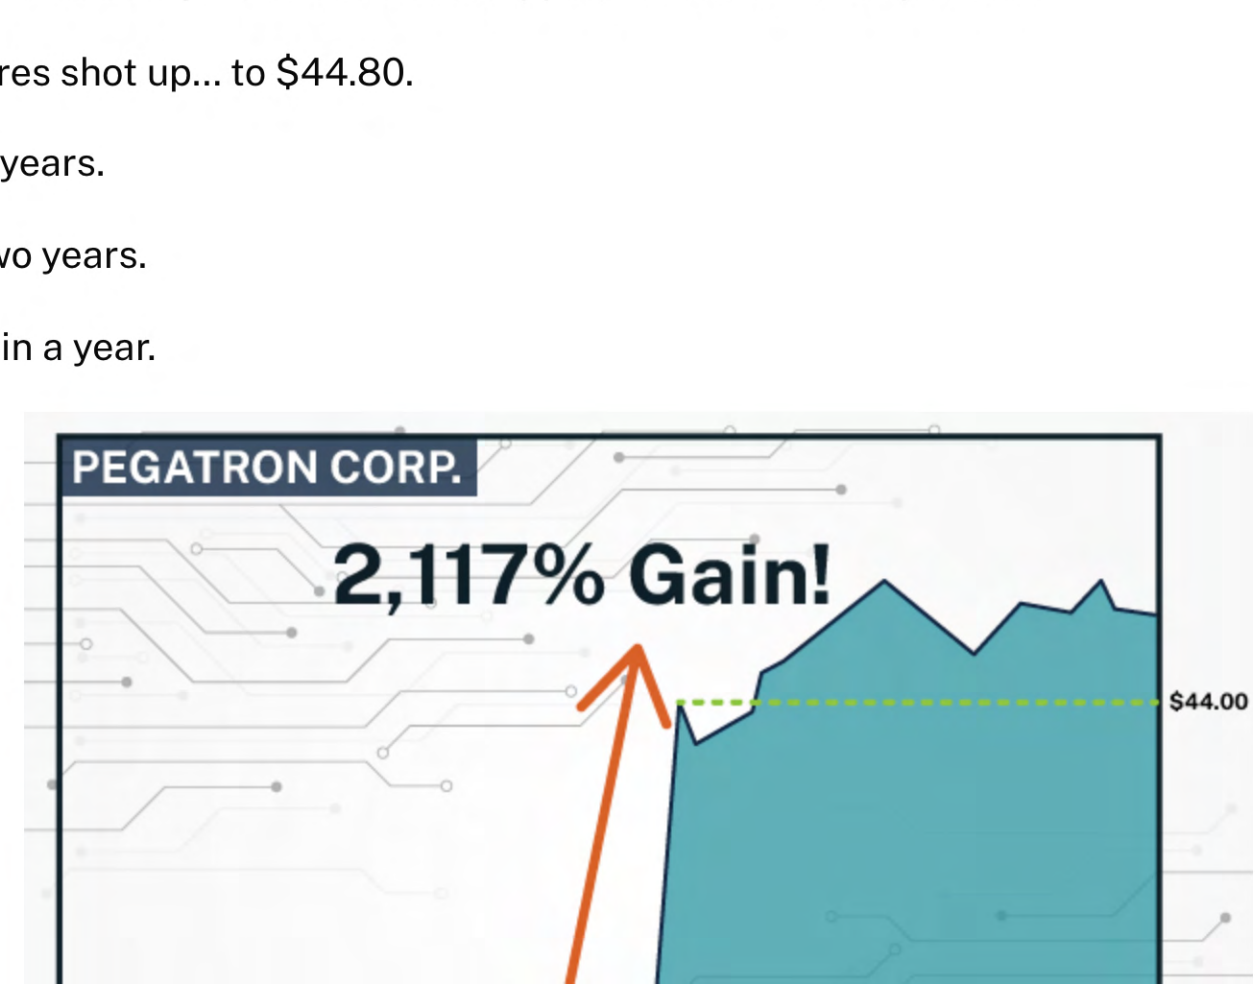
But thanks to a major contract from Apple, their revenue exploded…

And shares shot up… to $44.80.

Not in 4 years.

Not in two years.

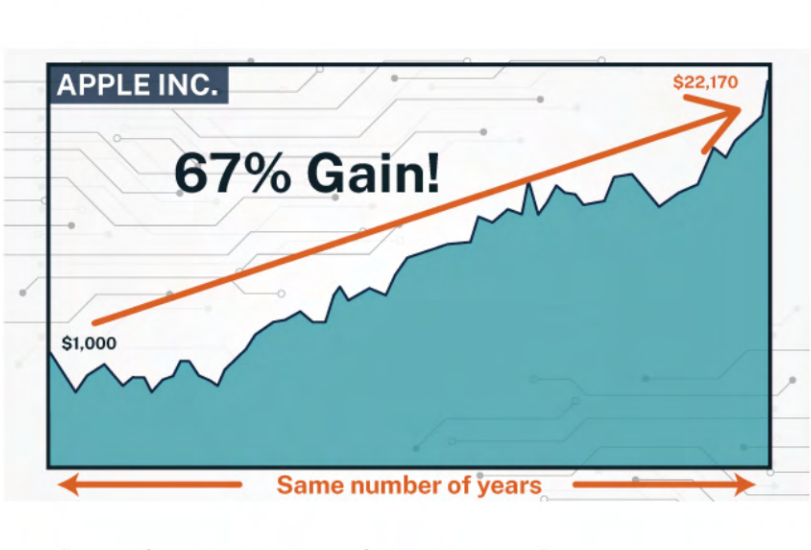
But within a year.

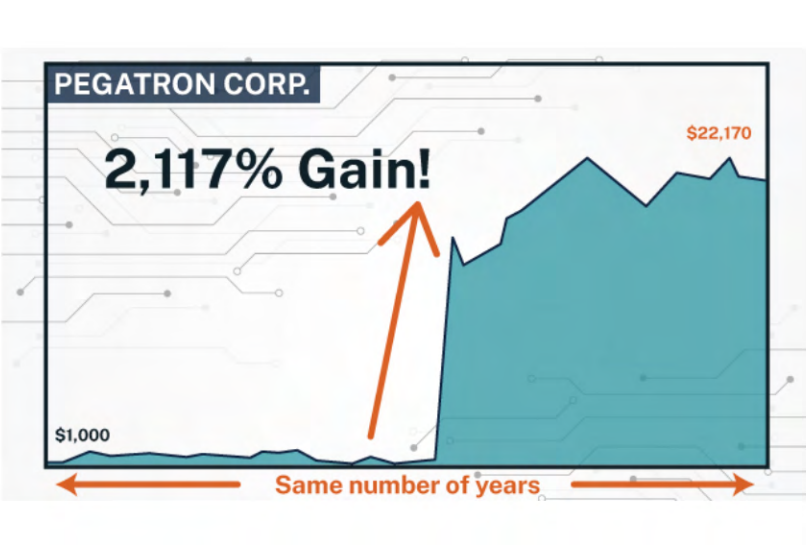


That's an exceptional 2,117% gain… enough to turn a $1,000 stake into nearly $22,170 in a year's time…

During the same period the Apple stock grew by a measly 67%.

Take a look.





See the massive difference?

A giant like Apple could never achieve those sort of gains in such short time.

The reason I'm telling you all this is because…

The Same Situation is Playing out Now

Only this time the gains could be MUCH bigger…

Now of course, *past performance is no guarantee of future results…*

But I've identified not one, but two tiny companies that I believe will ride the coattails of Amazon…

And benefit hugely from "StarNet".

If I'm right, these companies could explode by billions of dollars within a couple of years — just like Pegatron — and make fast movers rich.

In other words —

Just as Intel rode the IBM wave during the PC frenzy.

And Pegatron rode the Apple wave during the iPhone craze…

I believe one small chip manufacturer is all set to make a killing out of Jeff Bezos' "Big Bet." in the coming satellite frenzy.

"StarNet" Opportunity #1
"StarNet's" Rollout Could Send this Tiny Company Soaring.

The first opportunity I've found is a manufacturing company based out of California —

And while few people know this company's name —

It solves one of the biggest challenges companies like Amazon face when launching satellites.

Now you might ask… why do I think Amazon will partner with this company specifically? Why not somebody else?

As I mentioned earlier, "StarNet" requires Amazon to launch around 3,236 satellites into space.

In order to do this — Amazon has to equip each of these satellites with space specific infrastructure and components…

Specifically — radiation hardened components.

You see, outer space is very harsh to electronics.

The electronic components that work here on Earth cannot withstand the rigors of space.

Very few companies make these parts.

But thanks to months of research…

I've uncovered one tiny company that not only makes these specialized components, but…

And this is important…

I believe it's positioned perfectly to swoop in and make an absolute fortune off it.

After all… a single satellite can cost well over $250,000. And with 3,200 satellites approved for launch…

That's nearly a billion dollars right there for the satellites alone.

And as this company is a relatively small company compared to Amazon…

If my prediction is right and this company works with Amazon…

It could send shares soaring 500%, 600%, or even 1000% over time.

While I don't have a crystal ball to look into the future… here's why I believe this company will bag a contract.

You see. this company is no stranger to Amazon…

They already have a contract with Amazon Web Services to be their Advanced Technology Partner to provide specialized high-end security…

As Amazon scales out its satellites production…

This company is positioned perfectly to grab the lion's share of that $1 billion business… just for the satellite components alone.

But it gets even better…

This company is not a one trick pony —

They *already* have massive contracts with some of the biggest companies involved in the space industry…

We're talking major player like Airbus, Boeing, the US Government –

All of them rely on components and systems made by this company.

And very soon — Amazon too could be forced to rely on them…

Because reality is…

Space technology is the future…

Right now, there is a frenzy of activity in the space industry…

- **NASA has taken a huge step forward in allowing private citizens to fly to the International Space Station.**
- **One company plans to make over 115 flights to space by the end of 2021. By 2023, it's expected that these flights will carry a total of 3000 passengers who have already either registered or paid $250,000 per ticket.**
- **Thousands of satellites are set to be deployed and stationed in space within the next 2-5 years.**
- **Space manufacturing is picking up momentum by the day.**

And if you're looking for a cheap way to play the space boom —

You've got to check out this company.

But how do you invest in them?

Here's where the story gets even more interesting…

For years this company was off-limits to regular investors.

Was Only Available to Private Investors. Not Anymore

When I first heard about this company, it was private —

Only available to top hedge funds like **Vanguard, Boston Asset Management**, and the **Renaissance Group…**

Ordinary investors like you and I were locked out and couldn't get a slice of the pie.

But this year this small company went public…

And guess what?

Its value doubled in less than 100 days.

Now, the doors are wide open for ordinary investors like you and me to jump in and get a share of the ever-growing pie.

"StarNet" is just one of hundreds of projects jostling to make their mark in the fast-crowding space industry.

The way the space industry is exploding…

I predict the share price of this niche company could easily go up to **250%, 500%, 1,000%,** or even higher as the red-hot space industry goes into overdrive.

Which is why I believe the time to get in is now.

In just a moment, I'll be explaining how to claim the full details on this company before the big "StarNet" rollout.

But first, I should point out…

This is just one of the several companies I've found that could benefit from Amazon's foray into the space industry.

In fact, another company I've identified could explode even higher than this tiny company.

"StarNet" Opportunity #2
As the Space Industry heats up… a tiny stake in this company could turn into a windfall

There's a MAJOR problem in the space race nobody wants to talk about…

For the last 60 years — as more and more satellites enter the atmosphere —

A new danger has emerged that threatens the entire industry —

Space Debris.

And while that might not seem like a big deal —

Over the last 6 decades —

As governments, space programs, and companies have launched more satellites into space…

The atmosphere has gotten incredibly cluttered.

The junk includes everything from upper-stage rocket bodies, completely intact dead satellites, shards of stuff, bolts, nuts… even flecks of paint.

According to NASA there are 500,000 pieces of junk in orbit. The European Space Agency puts the figure closer to 900,000.

As the space debris can move seven times faster than a bullet.

Each of those pieces have the potential to damage working satellites and crewed spacecraft, including the International Space Station.

So as the space satellites industry heats up… there will be a huge demand for companies that deliver debris-removal services.

In fact, the April 26th event will focus on small satellites and commercial interests in the Low Earth Orbit (LEO).

I believe the major government players at the upcoming summit are the allies Amazon needs to move forward with their vision.

There's no way they won't discuss Amazon's interests in LEO…which is why I'm certain Amazon will respond to the pressure by releasing more details about this massive project shortly after the conference…

Already the global industry revenues from satellite-related activities is in hundreds of billions of dollars per year.

And as Amazon joins the other big names in the space race to launch additional satellites into space…

LEO guidelines including debris removal will become even more crucial for the space industry…

And I've uncovered a little-known Colorado based firm positioned perfectly to dominate the entire market…

They are working on a robotic arm that will pull out dead and abandoned satellites and other debris out of the way of active satellites.

And if this tiny company with an annual revenue of less than $2 billion grabs even a 10th of the space debris removal industry…

We are looking at 1000%, 5000% maybe even 10,000% gains.

And those gains could happen as early as 2026.

Remember, this bonus space debris opportunity is in addition to the earlier company we covered — the space component manufacturer that I predicted could shoot up 250%, 500%, 1,000% over time.

Are you starting to see why I call this the opportunity of a lifetime?

Now, if you're as excited as I am… and want to learn more…

Here's How To Get Started

As I mentioned earlier, my name is James Altucher.

And although I spent my earlier career as a hedge fund manager making rich people richer…

I stepped away from that role over the last few years to partner up with one of the largest financial research firms in the world.

And our goal is simple.

To take the same techniques I used as a hedge fund manager and teach them to the general public.

Because the reality is…

Getting rich isn't about working harder or longer…

Building ***real*** wealth is about working smarter and using the right strategies.

And if you begin investing in opportunities like this company, I've been telling you about…

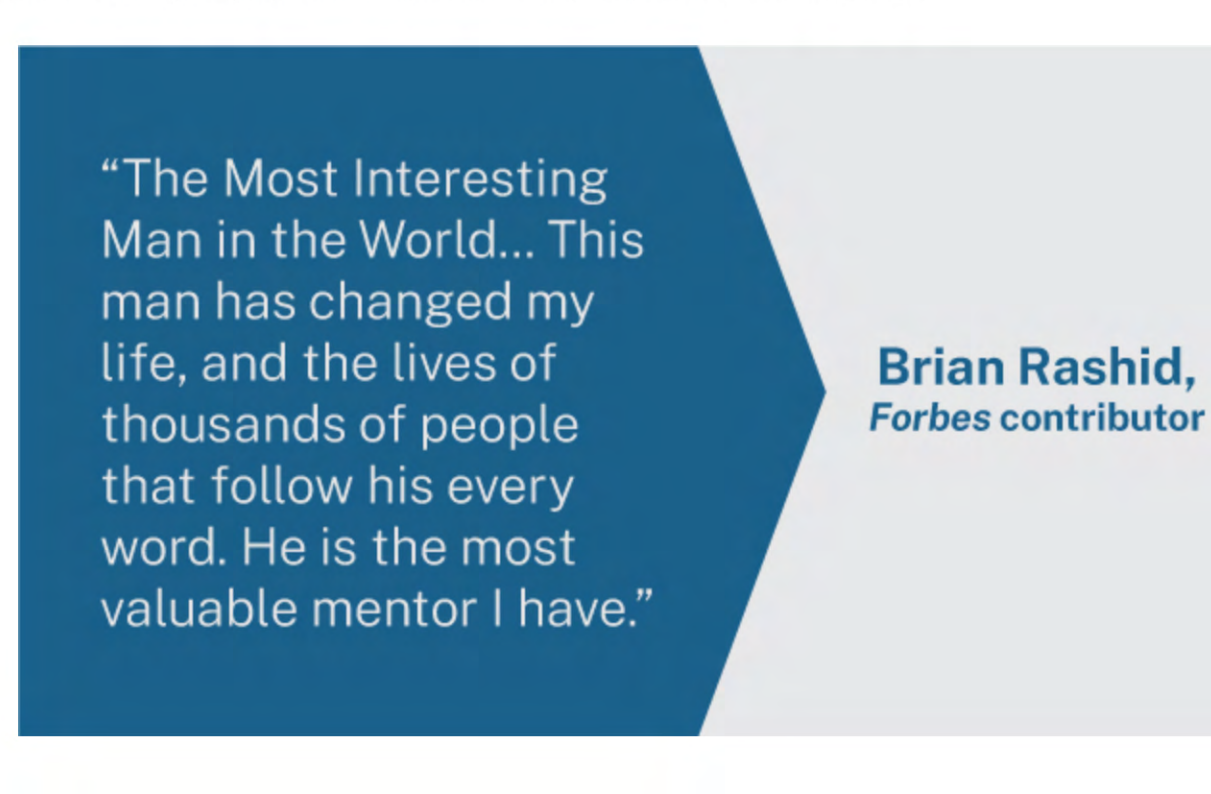
You'll be amazed how fast you can get rich.

And I've got to say…

Of all the things I've done in my career…

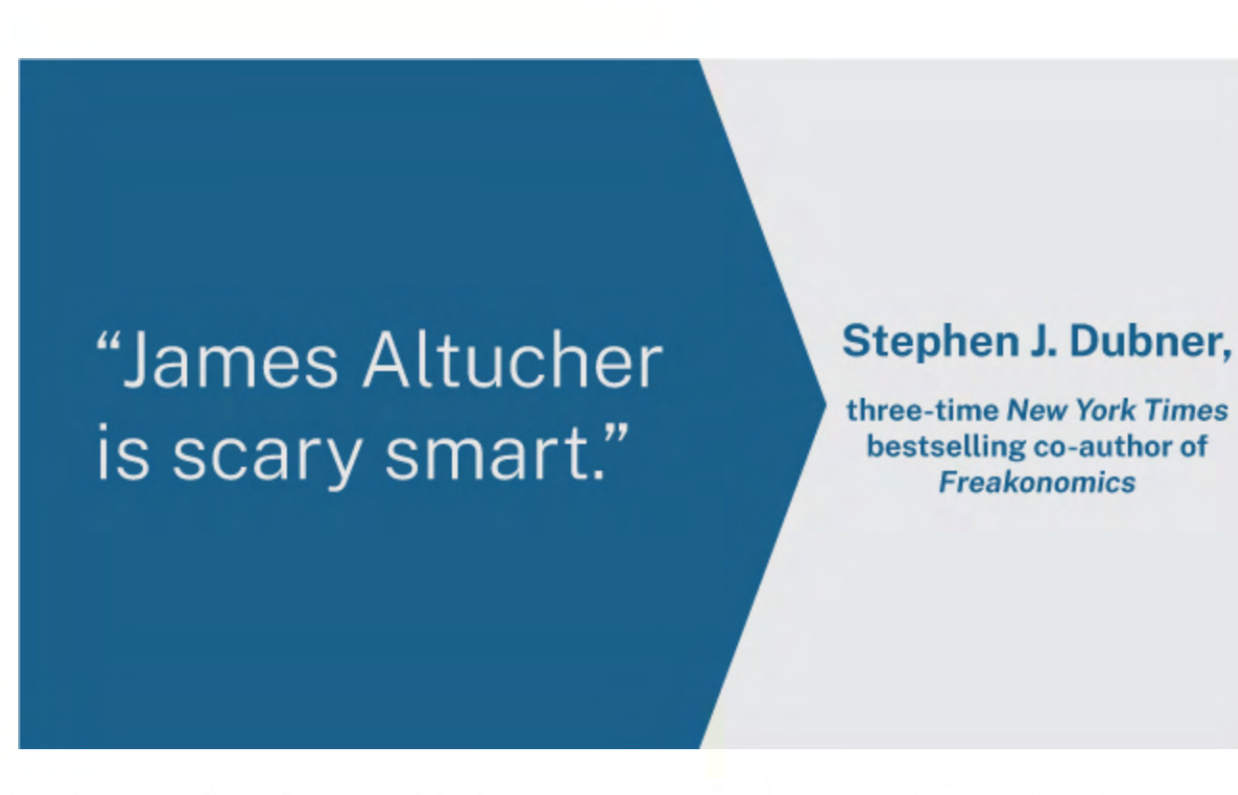
Showing people how to change their financial life is by the far the most gratifying…

Here's what a few people who've followed my work have said:



"The Most Interesting Man in the World… This man has changed my life, and the lives of thousands of people that follow his every word. He is the most valuable mentor I have."

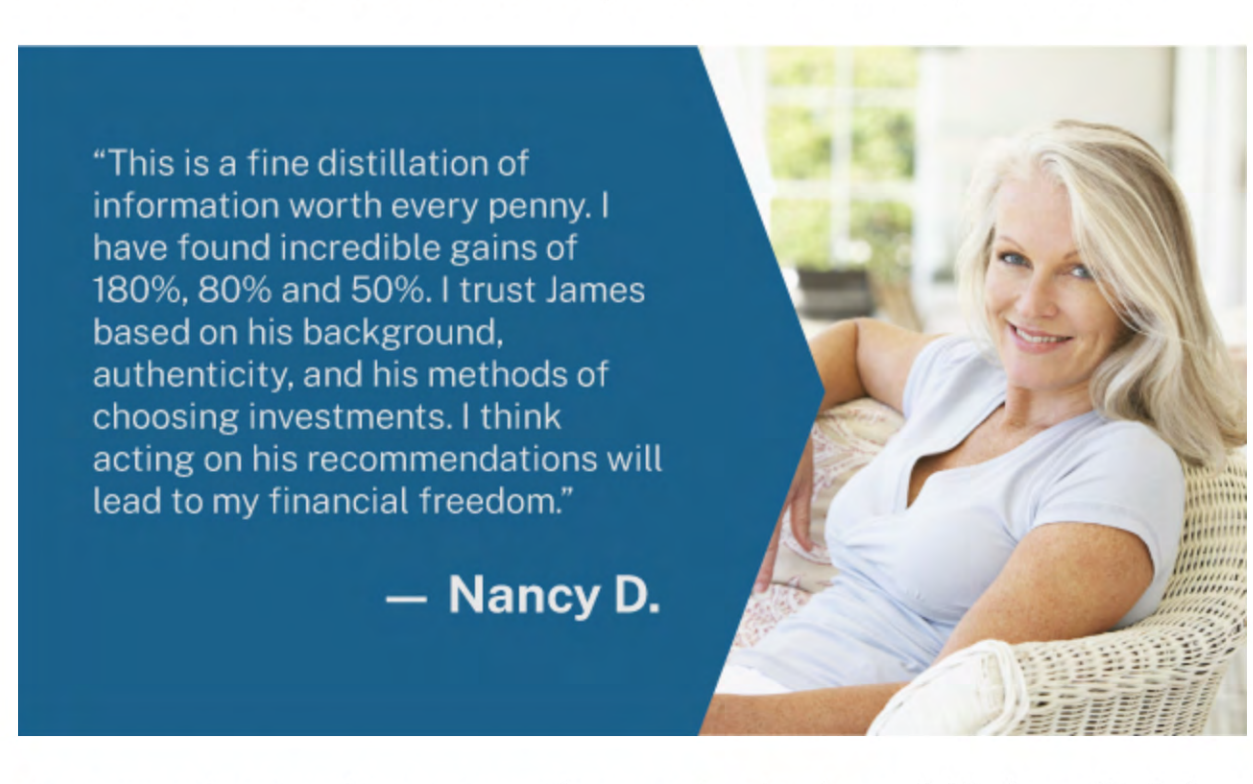
Brian Rashid,
***Forbes* contributor**



"James Altucher is scary smart."

Stephen J. Dubner,
three-time *New York Times* bestselling co-author of *Freakonomics*

And here's what readers have said about my research across my services:



"This is a fine distillation of information worth every penny. I have found incredible gains of 180%, 80% and 50%. I trust James based on his background, authenticity, and his methods of choosing investments. I think acting on his recommendations will lead to my financial freedom."

— Nancy D.

According to our estimates, Nancy saw these gains in about 648 days, 272 days, and 686 days.

"CY has netted us a double bagger (at least)…so thanks for that."

— George V.

"Your guidance has been invaluable"

— Kirk S.

"I've got to admit I started out as a doubting Thomas… But after a 182% gain and a 22% gain… I'm a believer… I sincerely appreciate your recommendations."

— Geoff S.

According to our estimates, George and Geoff saw each of their gains in a little over two years.

While I don't know for sure how long Nancy, George, and Geoff held their investments…

The important thing is that they profited hugely from my recommendations.

Of course, these are just a few of the examples I get every day. To see more of our typical results, click here.

And just as I tell all my fans, please note…

No investment is 100% risk-free and volatility may be an issue for a while when you're at the forefront of a technological breakthrough, so don't risk more than what you can afford to lose. —

That said, I truly believe this investment opportunity might be the best of my 2-decade career.

And to make it as easy as possible for you to get started, I've put the details on both of these companies into a special report called:

Jeff Bezos' Big Bet: Retire Rich on StarNet's Universal Internet Revolution.

JEFF BEZOS' BIG BET
Retire Rich on StarNet's Universal Internet Revolution
Altucher's Investment Network

Inside this quick easy-to-read guide — you'll discover all the details you need to capitalize on this play.

Including the company names, ticker symbols, and all the dates you need to know to have a chance at making an absolute fortune on this play.

And I'd like to show you how to claim your copy today.

This report breaks down the entire strategy… including the history behind these companies… and the projected time table for this coming boom.

The gains could be explosive.

Right now, I'm in a position to share this information with around 20,000 new readers.

And I'll be doing it on a first come first served basis.

But you've got to hurry…

The sooner you get the details and get into position, the better your chance at big gains.

Bottom line is: StarNet's Universal Internet could give you a fantastic opportunity to get rich in the hyper competitive tech markets.

But you see, up until this point, I've mainly focused on the "StarNet" technology and the incredible opportunity it represents…

What I haven't told you yet is…

This idea is just one of many ideas that give you a chance to increase your gains while potentially slashing your risk.

In fact, over the last several years…

I've developed an entire newsletter dedicated to revealing hidden situations that present phenomenal profit opportunities like these.

I call it ***Altucher's Investment Network.***

This monthly letter specializes in finding undervalued… little known investments… far from the beaten path of Wall Street.

This work is my passion, and has taken me to numerous states and countries in search of the perfect investments…

In fact, in the last year alone, I've sifted through thousands of annual reports, pored over countless balance sheets and had boots on the ground in numerous countries.

Grueling… ?

Sometimes, yeah.

But that's the kind of work and diligence it takes to locate exceptional opportunities that go into the newsletter I've been telling you about.

As I said, I've just created a report that gives you full details on two such opportunities that I'd love to send to you.

But before I do, I want to give you something very special…

A quadrillion dollar opportunity within your sight

In the year 1985, engineers at the University of Wisconsin had a Eureka moment.

They discovered that an element in a sample brought down from the moon in Apollo 17… is packed with tremendous "wealth-creating potential."

Just one ton of this element could fetch up to an estimated $3 million.

Just so you get an idea, one space shuttle payload of the element can power the entire US for a whole year.

The best part is, according to my calculations, there is enough of the element in the lunar topsoil to power the entire world for over 1000 years.

No wonder this element is being called as the holy-grail of energy.

But wait, there's more.

The lunar topsoil is also rich in magnesium, aluminum, silicon, iron, titanium…

And rare earth materials that are used in smartphones, renewables, healthcare, and electric vehicles.

The lunar topsoil is also rich in Platinum currently valued at $34,500 per kilogram.

No wonder financial analysts have pegged the true value of the moon resources at around $1 quadrillion…

That's a one followed by 15 zeroes. Or a million billion billion.

The best part is, as most of the moon's resources are in the topsoil…

No drilling is required.

It's just waiting there to be scooped up.

Of course, till now even scooping up lunar topsoil was almost impossible for humans.

But now, thanks to advancements in A.I. and robots… most of the mining of the moon and nearby asteroids will be done by smart autonomous robots

Also, till recently, there were no laws governing space mining.

But Congress recently (2015) passed a law that allows US citizens to claim resources mined in space.

That opened the floodgates.

Big companies like Google, Blue Origin, and investors like Peter Thiel have poured billions in lunar mining.

But once again, just as with "StarNet"…

The real wealth-creating opportunity does not lie with Amazon, Virgin, Google…

But with a completely different company.

In addition to having a proven record in the energy industry…

This company is an important supplier for NASAs space launch system.

Now here's where it gets really interesting.

In September 2020, NASA offered to pay as much as $25,000 for one pound of the lunar topsoil...

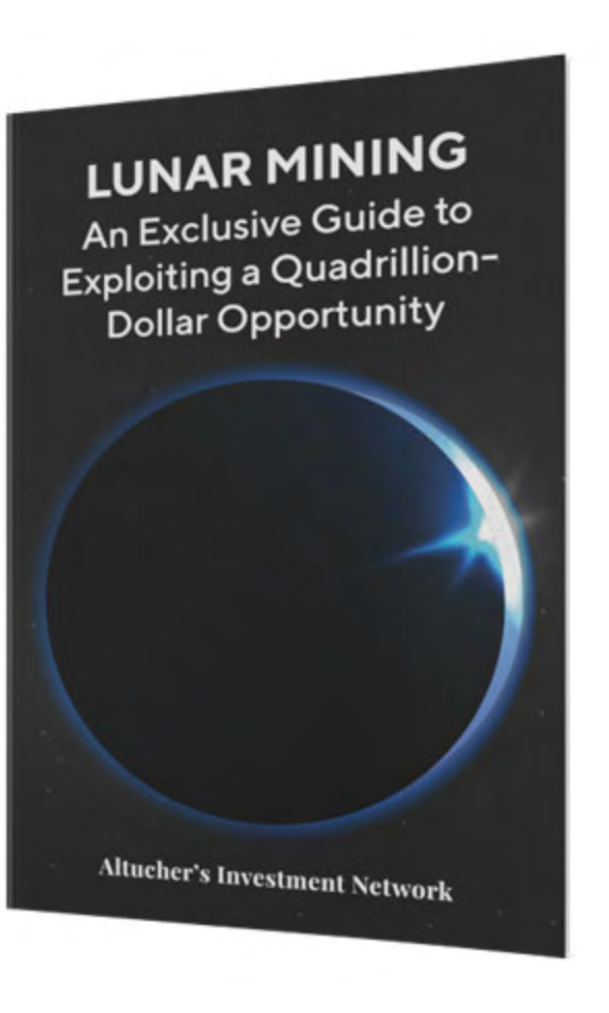
And some rockets powered by this company could eventually carry about 100,000 pounds... that's $2.5 billion every trip.

Considering this tiny company is already partnering with NASA, I'm more than certain they will get the "top supplier" billing for lunar soil.

If my prediction is right, the deal could propel this under $3 billion dollar company into the $100 billion dollar category over time...

And send their stock price soaring to the moon.

Of course, you'll need a lot more information if you want to invest, so...



LUNAR MINING
An Exclusive Guide to Exploiting a Quadrillion-Dollar Opportunity
Altucher's Investment Network

I've compiled all the important details of this mining company in an exclusive report called...

Lunar Mining – An Exclusive Guide To Exploiting a Quadrillion-Dollar Opportunity

And yes. Even this report is ABSOLUTELY FREE with your subscription to ***Altucher's Investment Network***...

But I'm not done yet...

If you've reached this far... It's clear to me that you are very interested in the rapidly-growing Space Industry.

So I want to give you what I believe to be the...

Master Key To Unlock the Frontiers of Space

The one growth-industry that's showing us the true potential of space is Space Manufacturing.

That's because space provides a unique manufacturing environment not available here on earth – Micro gravity.

As our gadgets become more and more sophisticated... there is a growing need for material and components that deliver higher resolutions, faster processors, more bandwidth, and greater precision.

This need can only be met with components manufactured in the absence of gravity.

Even as you read this, space manufactured products – right from fiber optic cables to drugs, to engineering alloys, to 3D printed human tissue – are proving superior to their earth counterparts.

And not just by a bit... but by orders of magnitude.

Which is why some leaders including Jeff Bezos are proposing that all manufacturing be done in space.

Many established players like Northrop Grumman and NASA are powering the industry.

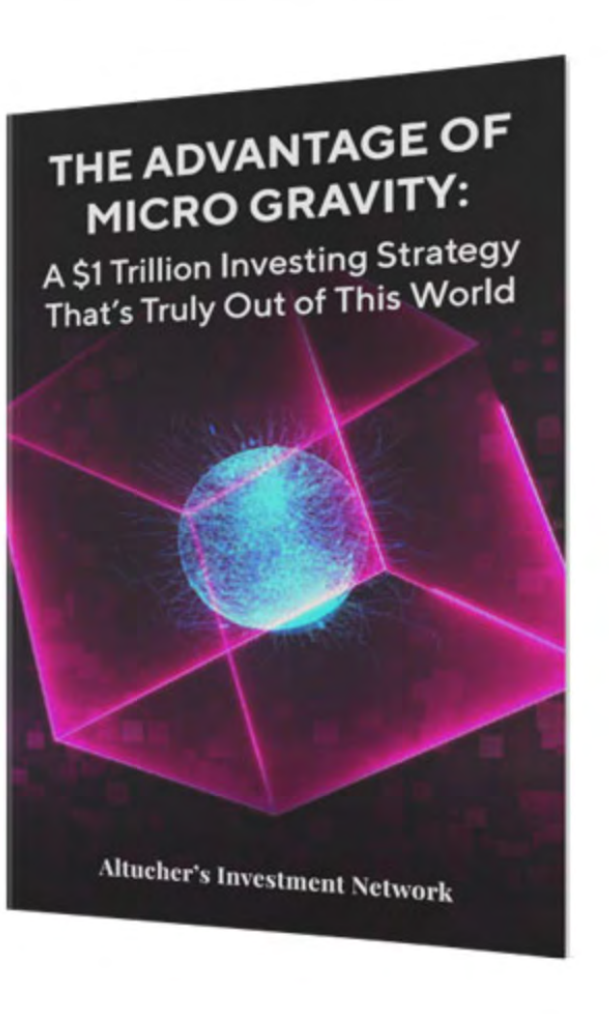
And there are some relatively new players too. One such player registered a 300% gain over the last 12 months.

That's enough to convert a six-figure stake into a seven-figure bonanza.

That's the power and potential of space manufacturing...

The only problem is not many of us cannot afford to put in a six-figure stake.

That's where I come in.



THE ADVANTAGE OF MICRO GRAVITY:
A $1 Trillion Investing Strategy That's Truly Out of This World
Altucher's Investment Network

I have a simple strategy by which you can buy a stake in some of these expensive plays without burning a hole in your pocket.

The best part about this strategy is that you can get a stake in the top space manufacturing companies...

For a fraction of the price (as much as one-tenth in certain cases).

And before I forget... this strategy also has huge tax advantages.

But you'll have to hurry!

With a new administration around the corner... there will be a spate of new tax rules coming up.

I cannot stress this enough. In fact, to help you quickly get on board, I've compiled a report called,

The Advantage of Micro Gravity: A $1 Trillion Investing Strategy That's Truly Out of This World.

As with the other two FREE reports, you'll discover all the details you need to capitalize on this unique strategy.

Including an in-depth look into space manufacturing, the company names, ticker symbols and all other investment details.

I'd like to send you a copy of even this report FREE when you subscribe risk free to my newsletter today...

The question is... is this research right for you?

Well, only you can decide after seeing my research first-hand.

But there is a dead certain way to tell if it's definitely NOT right for you...

Conventional Thinkers Not Welcome

If you're the type of person that thinks our liberal politicians have your best interest at heart...

If you're the type of person who actually likes paying overpriced commissions to buy into stocks, bonds, options and mutual funds...

And if you're the type of person who's willing to settle for table scraps, while others go for big gains...

Then I can say that the ***Altucher's Investment Network*** is ***DEFINITELY NOT*** right for you...

See, I'm looking for a group of folks brave enough to tap into the same kind of investment research the world's most rich and famous use to grow their wealth.

The assets we examine aren't typical.

They require a special type of person – an *unconventional* thinker – to see 'em work.

They're more fun.

They're easy (if you play them the way I'll show you)...

And most of all...

Done the ways I'll show you, they could just make you a fortune.

But just to make absolutely certain than my research is right for you, here's what I've arranged for you today...

Try out *Altucher's Investment Network* for 6 months completely RISK-FREE!

There is no need for you to risk your hard-earned money.

Enroll today for a trial subscription to the ***Altucher's Investment Network*** and you'll receive 12 issues of my monthly newsletters in your email inbox.

But that's not all.

I'll also automatically email you, with no obligation, digital copies of:

FREE Gift#1: ***Jeff Bezos' Big Bet: Retire Rich on StarNet's Universal Internet Revolution.***

FREE Gift #2: ***Lunar Mining – An Exclusive Guide to Exploiting a Quadrillion-Dollar Opportunity***

FREE Gift #3: ***The Advantage of Micro Gravity: A $1 Trillion Investing Strategy That's Truly Out of This World.***

You'll have my personal promise that each issue will detail cutting-edge ways for you to potentially increase your gains in today's crazy market environment... all through hidden investments

If for any reason over the next 6 months you're not satisfied, simply let us know and we'll send you a full refund, of your subscription fee no questions asked.

Yes – a full 180 days. I'm sure you'd agree that's the "best in class" guarantee.

After all, where else in life can you try something for SIX MONTHS and get your money back if you don't like it?

And... if you do decide to part ways... you can keep everything we've sent as a thank-you for giving our service a try. We'll simply agree to part as friends.

Fair enough?

But frankly, I don't think you'll cancel...

Because once you get a taste of how significantly your financial situation can change with the right information... you're going to be hooked.

So...

How much does the ***Altucher's Investment Network*** cost?

I'll tell you... but before we get into that, there's one more opportunity I think you should know about...

The Choose Yourself Guide to Wealth

The value of this hardcover is currently $14.33.

But I'll give you an electronic copy of this book... absolutely FREE as a part of this offer.

This 279-page book is *jam-packed* with some of my best income secrets that I personally use to survive and thrive in the new American economy.

For example, you'll discover...

*****How to make money on Amazon!**

You'll be amazed when you learn how one of my friends is using Amazon to make money... WITHOUT owning a company, sourcing products or hiring employee (See page 181.)

*****How to eliminate your debt in 30 seconds or less?**

Home Debt... Student Loan Debt... Credit card Debt? They are all scams to get your hard-earned money... and you are the victim. But you don't need to be. All you need to do is rethink your priorities and figure out methods to make your money work for YOU. There is a radically gutsy method you can use to come to terms with your mortgage and credit card debt.

Don't worry! It has nothing to do with declaring bankruptcy, moving, or hiding your assets... and it's 100% legal.

But I have to warn you... this strategy is NOT for everyone. (See page 218.)

*****How to use my "Idea Matrix" to create your own wealth... and never rely on corporate America or the government again!**

Do you ever feel that you are not in control? That the reins of your future are in the hands of your boss, your bank, or your government?

Anyone who learns how to use this secret tool may never have to worry about money again.

The kind of thinking behind the idea matrix is so powerful one man used it to turn down a $250 million offer... It's a good thing he turned down the offer as he's worth over $100 billion today (See page 19.)

*****And much, MUCH more...**

You'll have to see this information for yourself to find out how incredibly valuable it is.

Look, in today's world life comes at you fast.

You need to be dialed in to the very latest tools, techniques, and "hacks" to make and save more money.

That's why my research team and I put together this book...

It gives you the very best ideas, tricks and techniques to enhance your quality of life.

And we'll not only share these secrets with you...

We'll walk you through how to do them... step-by-step.

You'll know exactly how to make them work in the real world.

And this book — along with all the other reports — is yours FREE when you take a trial of ***Altucher's Investment Network***

How to Get 84% OFF Today

The retail price of ***Altucher's Investment Network*** is $299 for a year-long subscription.

But for a limited time, my publisher has arranged for you to get the entire year of ***Altucher's Investment Network*** for nearly 84% off.

That means for a little more than 10 cents a day, you can subscribe to my research service for an entire year...Plus, these three reports and FREE book...

THE ADVANTAGE OF MICRO GRAVITY:
JEFF BEZOS' BIG BET
Retire Rich on StarNet's Universal Internet Revolution
LUNAR MINING
An Exclusive Guide to Exploiting a Quadrillion-Dollar Opportunity
CHOOSE YOURSELF
GUIDE TO WEALTH
JAMES ALTUCHER

With a value of over $901 for just...

$49

Why so cheap?

It's simple — we expect this is going to be a long-term relationship... and this is the best way for you to see just how amazing our research is.

So that's why I'd encourage you to take us up on one of the best deals we've ever offered.

And remember — there's no obligation.

You have a full six months to make sure this is right for you. Take your time.

If after six months... for any reason you want to leave us, no problem. Just let us know and we'll send you a full 100% refund — no questions asked.

And to top it off, you can keep everything we've sent you as our thank-you for giving this research a try.

Bottom line with this offer, you simply can't lose!

Running Out of Time... Window's Closing

Now I know we've covered a lot of ground so let me wrap things up...

And show you what to do next...because remember: learning how to invest smartly is just minutes away.

I realize right now you may be feeling overwhelmed, confused, or even a little skeptical and that's okay.

The way I see it... you've basically got two ways to go from here...

Option #1: Take what I've told you today and try to figure it out alone...

And who knows...

If you've taken really good notes, are willing to make a few calls, and do some detective work, ...you may find some success.

Or there's **Option #2:**

This is the savvy choice, because you'll let me do the grunt work for you...

Why start from scratch and try and re-invent the wheel when I've already done the research for you?

I'm bringing your attention to a huge trend just at the right time... so that you do not miss out and regret later...

Just imagine finally breaking free from the financial shackles that've held you down for so long...

Imagine what it would be like to get ahead of major tech innovations — before the main stream...

Imagine how that would feel to cash in 1,000%, 2,000%, even 10,000% or more over time...

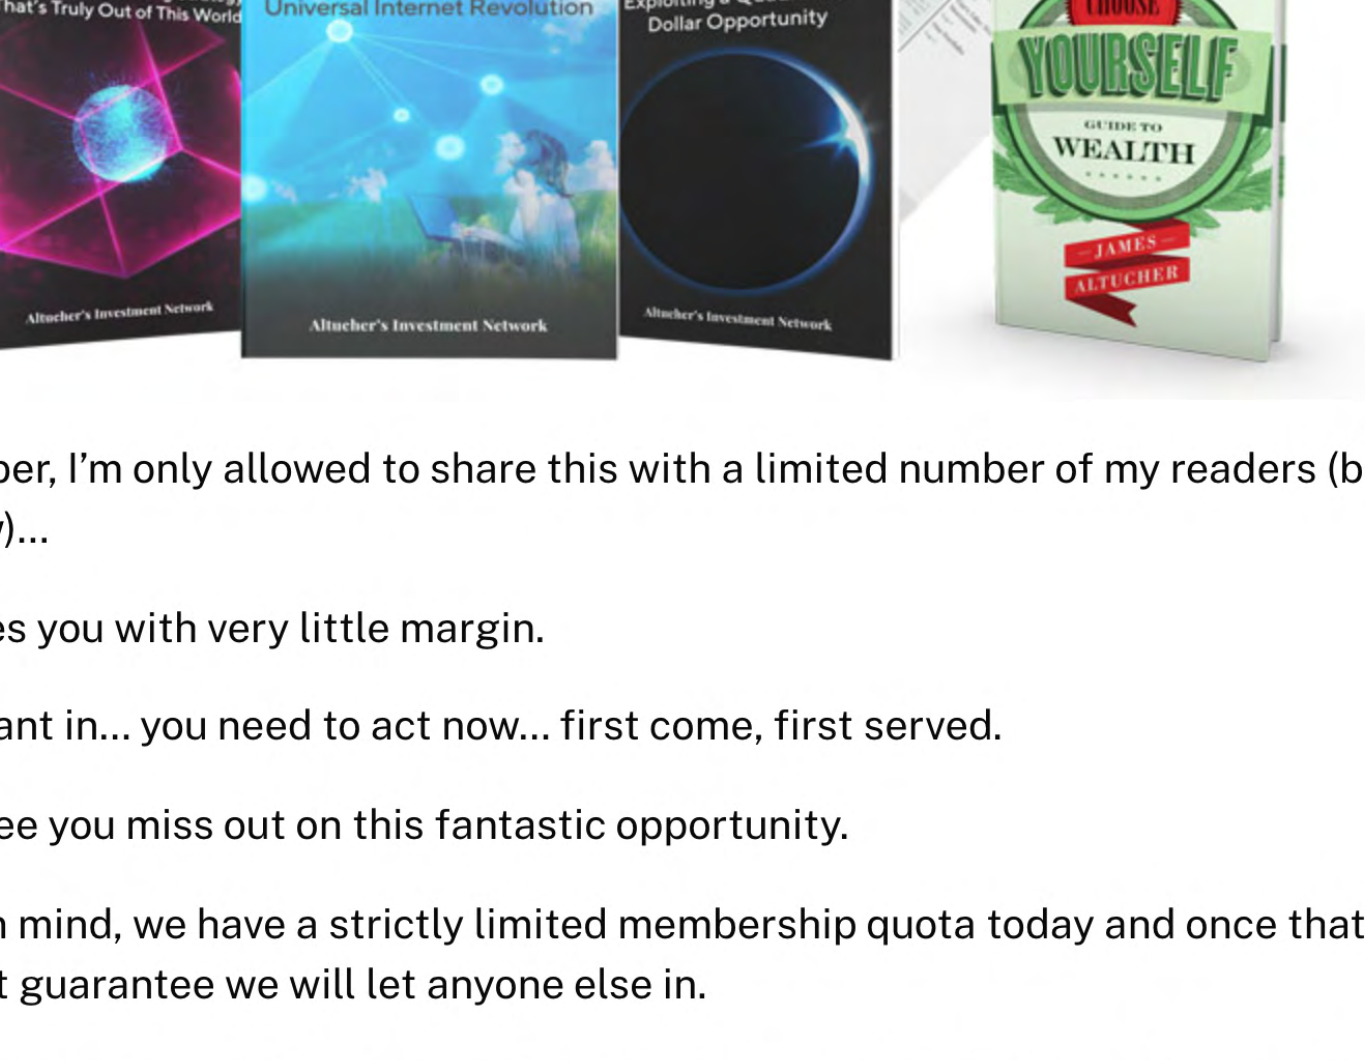
And turning a small nest egg into an absolute fortune!

Like I showed you... there's several opportunities about to pop in price...

And you could have access to these plays just minutes from now.

The ***Altucher's Investment Network*** is the easy path to wealth and independence

Let's take a look at what you'll receive when you join us today:



THE ADVANTAGE OF MICRO GRAVITY:
JEFF BEZOS' BIG BET
Retire Rich on StarNet's Universal Internet Revolution
LUNAR MINING
An Exclusive Guide to Exploiting a Quadrillion-Dollar Opportunity
CHOOSE YOURSELF
GUIDE TO WEALTH

But remember, I'm only allowed to share this with a limited number of my readers (both old and new)...

Which leaves you with very little margin.

So, if you want in... you need to act now... first come, first served.

I'd hate to see you miss out on this fantastic opportunity.

Also keep in mind, we have a strictly limited membership quota today and once that's filled, I can't guarantee we will let anyone else in.

Only the first comers will be guaranteed access to this offer... everyone else could be out of luck.

So, go ahead and click on the blue button below to claim your 84% discount now.

Once you subscribe, you'll be granted immediate access to everything: Including your own copy of ***Altucher's Investment Network*** plus all the FREE bonuses.

So, take action now and take advantage of this limited space offer, while you still can.

And wisely get on the right path to a safe, and profitable future!

Still here? You may have some more questions...

Let me answer some common ones...

Q: You mentioned 3-digit and 4-digit percentage gains. Does this involve options?

A: No! Options are very risky and are only suitable for people who understand options trading. But this opportunity does not come with the risks associated with options. The reason you can expect three and four-digit gains is because you will be investing at a time when "StarNet" Opportunity #1 and "StarNet" Opportunity #2 are still trading below $50. That said, there is nothing to stop you from using these plays for options trading. But that's entirely your call.

Q: Is any part of this Tech Breakthrough ready?

A: Yes. As I showed you earlier, there are two main components to the breakthrough –

1) the satellite in low orbit and

2) the receiver in your home and office.

The prototype of the receiver is ready. It incorporates hundreds of small antennas into a small 12-inch disc which is lighter, smaller, and potentially more affordable than any receiver of its kind. The best part, the prototype has already been tested in various environments. And it has **"passed all tests"** even though the testing range was **50 times more than the range required.**
