Silicon Valley's most controversial secret…

"Penny IPOs"

The man regarded by many as America's most successful angel investor reveals a secret class of IPOs that can grow 100 to 300X more than overhyped stocks like Uber, Lyft, and Airbnb…

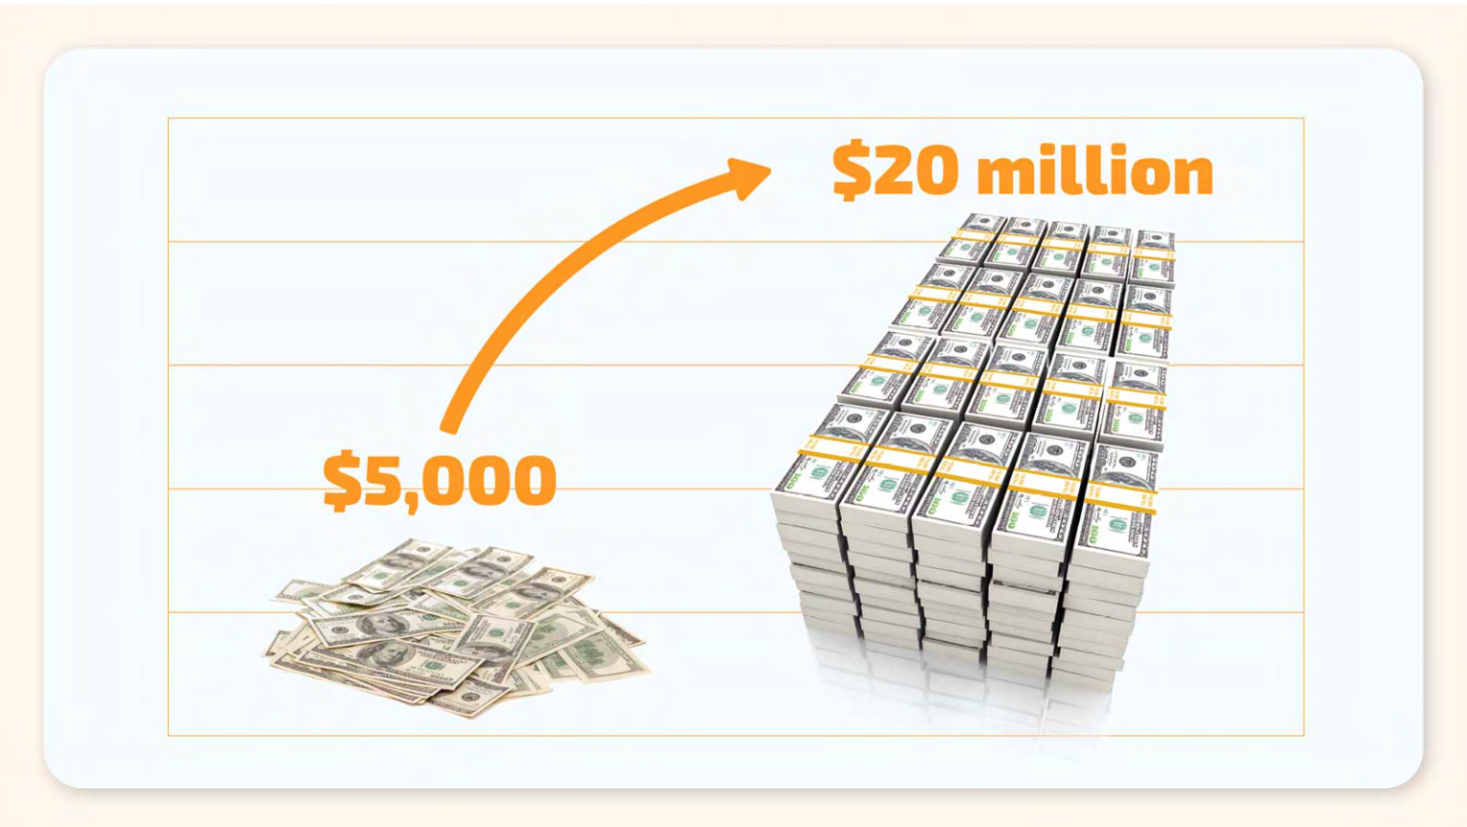
> **"Thank You, Thank You, Thank You!!!! I am so excited to have finally had my FIRST substantial gain since I started investing in 2015. This is so much fun."**
> **— Millie J.**

The average American today has been hosed!

He gets the scraps, *after* Wall Street and Silicon Valley have scooped up 99% of the profits…

- **Like how Sequoia, the venture capital firm, made 343 times their money on Google *before* it went public…**
- **How another firm made 250X on Snap before it went public…**
- **And how Softbank made—*get this*— 4,000 times its money on Alibaba.**

Here, a simple $5,000 investment turned into a cool $20 million.



When was the last time YOU had a 4,000% gain?

Thankfully, there's still a way for the "little" guy to get VC-like returns.

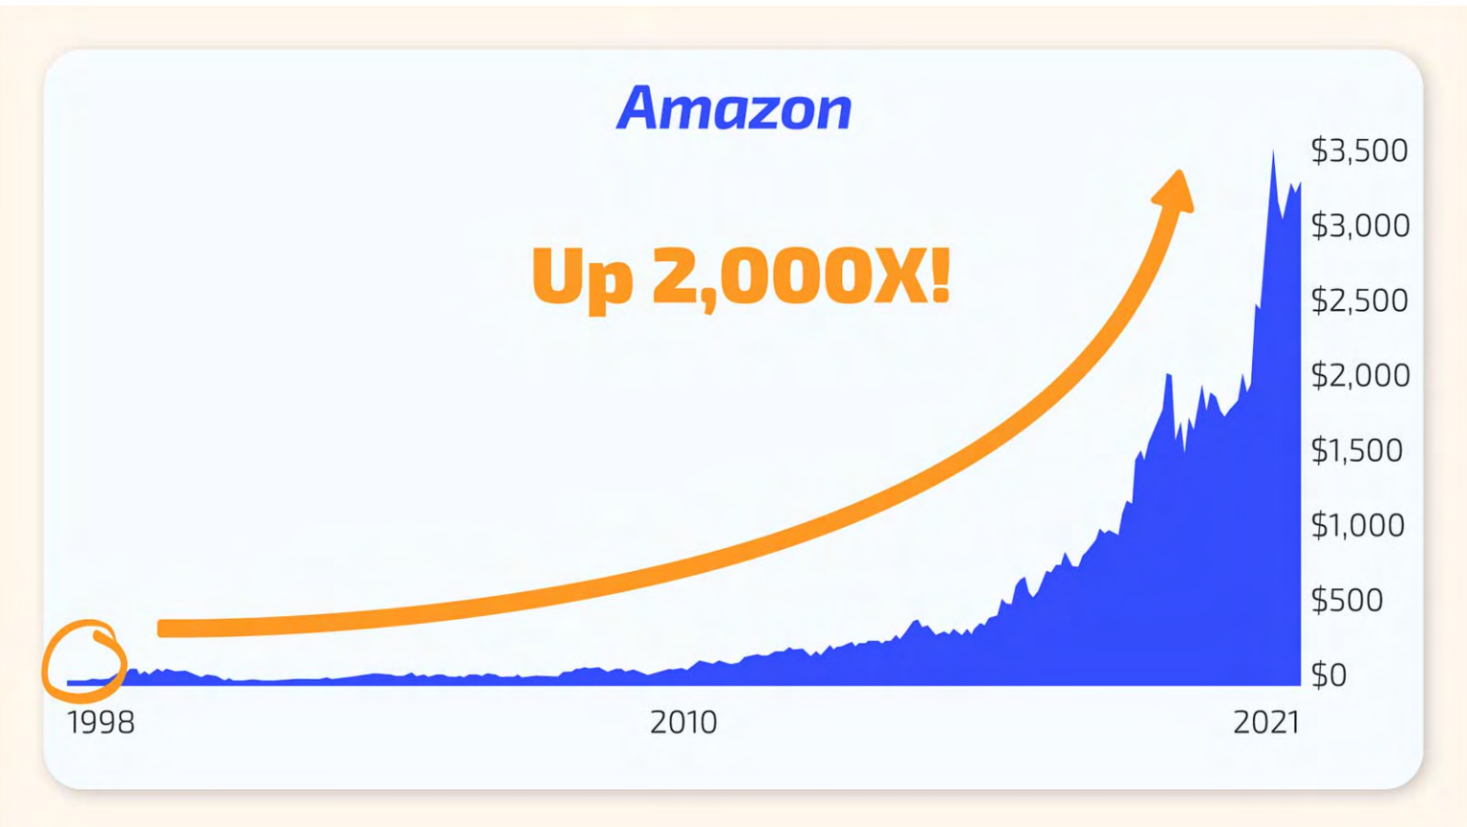
The secret is what I call "Penny IPOs" …

What is a "Penny IPO"?

These are incredibly small, very explosive early-stage stocks that go public almost every week.

And they're the closest thing I've found to turning back the clock and investing in a company like Amazon 20 years ago…

Before it shot up over 2,000X!



And yet, these IPOs are so tiny in comparison to the big IPOs which get all the attention – *it's getting very little attention from the financial press.*

Most of these "Penny IPO" companies, you see, are **anywhere from 100 to 300 times smaller than Airbnb or Uber!**

And while you might think "smaller" means riskier…

You'd be dead wrong!

These are good—check that, *great!*—companies with plenty of venture capital funding.

In fact, even Bill Gates and Jeff Bezos invest in them, as you'll see shortly.

Author: Ministerie van Buitenlandse Zaken
Bill Gates
Author: Seattle City Council
Jeff Bezos

But because of a strange quirk, *they remain undiscovered and very cheap!*

The best part is:

You can invest in Penny IPOs *today*. From *any* brokerage account. *And without* having to be a millionaire accredited investor!

Quite frankly, this is the biggest secret on Wall Street and in Silicon Valley. And today—*once and for all*—I'm going to blow the lid off this explosive story.

I don't care who gets mad.

At this point in my life, I'm more interested in helping Main Street Americans who've been left behind and duped over the past decade...

In a minute, I'll tell you how to get the names of the 3 best "Penny IPOs" I've found.

These are the safest bets I know of today.

Each has the potential to double or triple—*even quadruple your money*—in just a few days…

Don't believe me?

Here's a real-life example…

Ever heard of a company called Synthorx?

Most likely you haven't.

Like most "Penny IPOs," only about one American in a million is familiar with it.

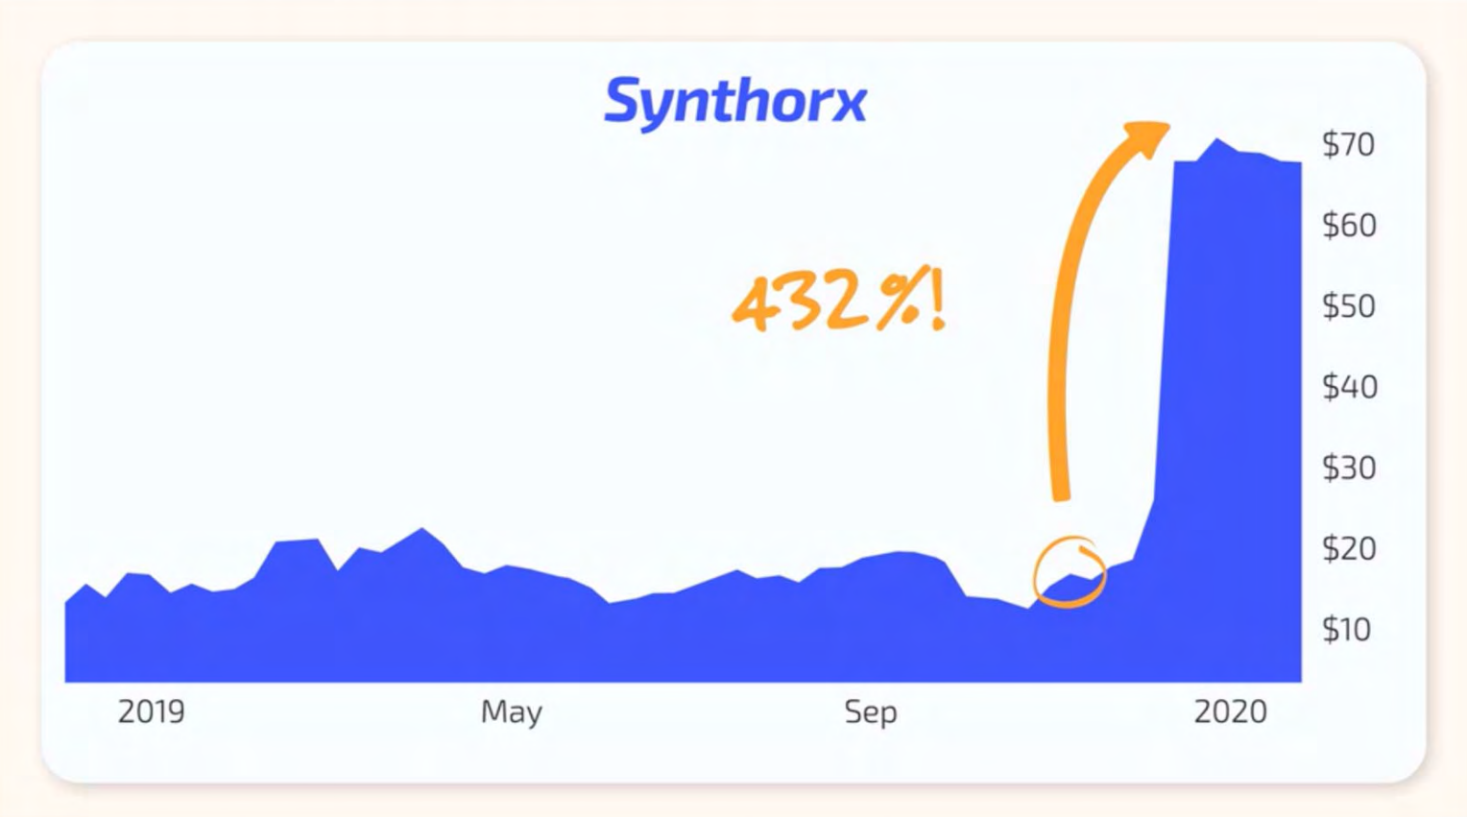
It's a great company. With solid VC backing.

But, because of the unusual quirk I'll get to in a minute, it was still hidden and dirt cheap…

I had my eye on Synthorx for over a year…

And then, when the timing was right, I urged a small group of my readers to buy as many shares as they could…

Just 6 weeks later, the stock popped by 432%!



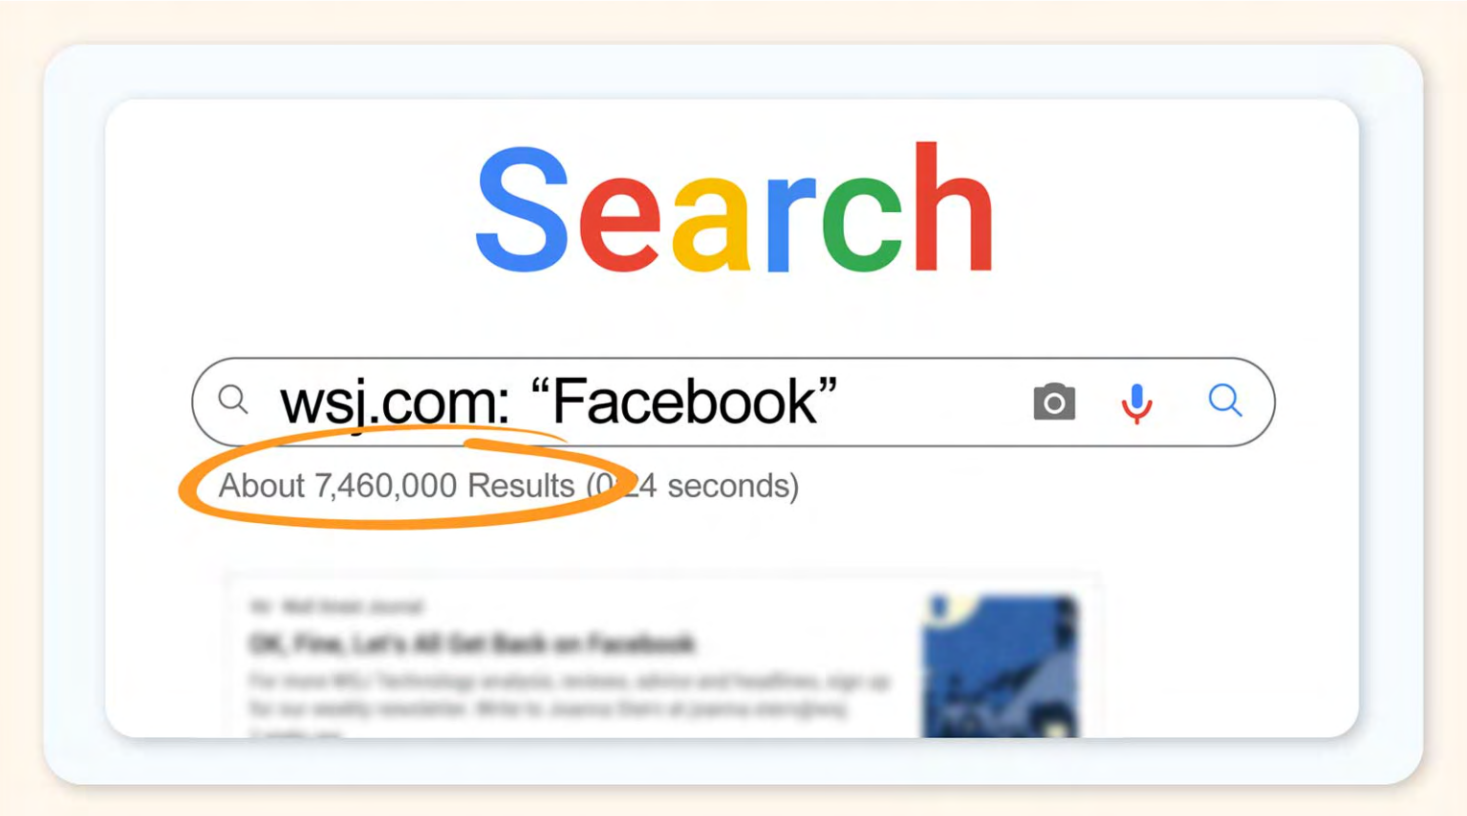
"Thank you," said William C. "*Never had a big gain like this before."*

"The most thrilling trade I ever made in over 40 years of investing!!!" wrote Claudia H.…

Now…

With an eruptive stock like Synthorx, you'd think the *Wall Street Journal* would be all over it…

I mean, the *Journal* mentioned Facebook 7.5 million times on its website…



Search

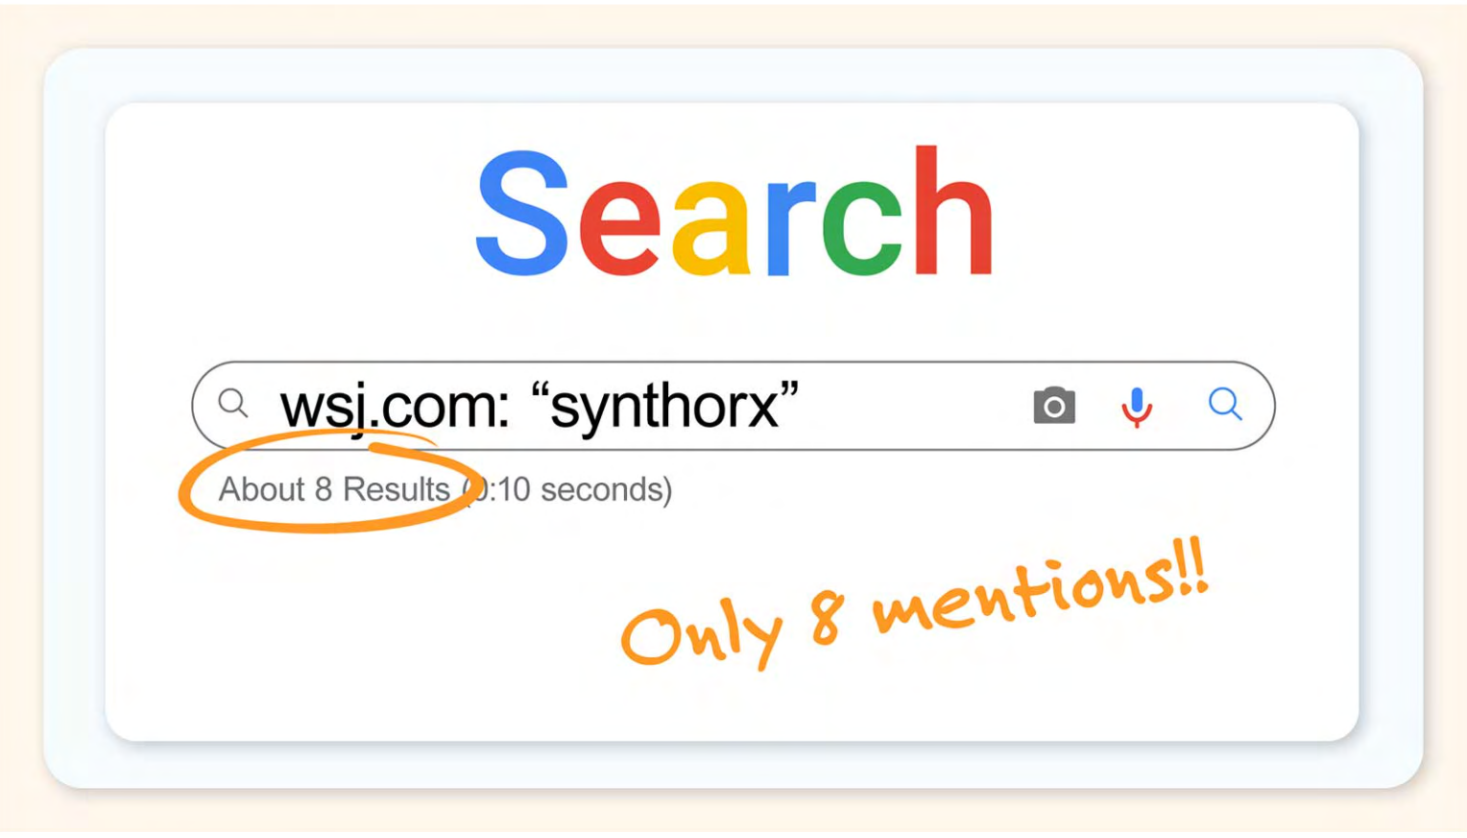
About 371,000 Results (0.23 seconds)

But Synthorx, our mighty Penny IPO?



Search

wsj.com: "synthorx"

About 8 Results (0:10 seconds)

Only 8 mentions total!

And, get this…

7 of 8 of those came AFTER I had already shown my readers how to 5x their money…

So, you can see why *I'm convinced* Silicon Valley and Wall Street are keeping their lips sealed on these Penny IPOs.

To protect their HUGE advantage…

And keep the lion's share of the profits to themselves!

(In fact, just 10 individuals alone have made a combined $83.8 billion thanks to Penny IPOs… but I'd venture you're not familiar with any of the 10 names.)

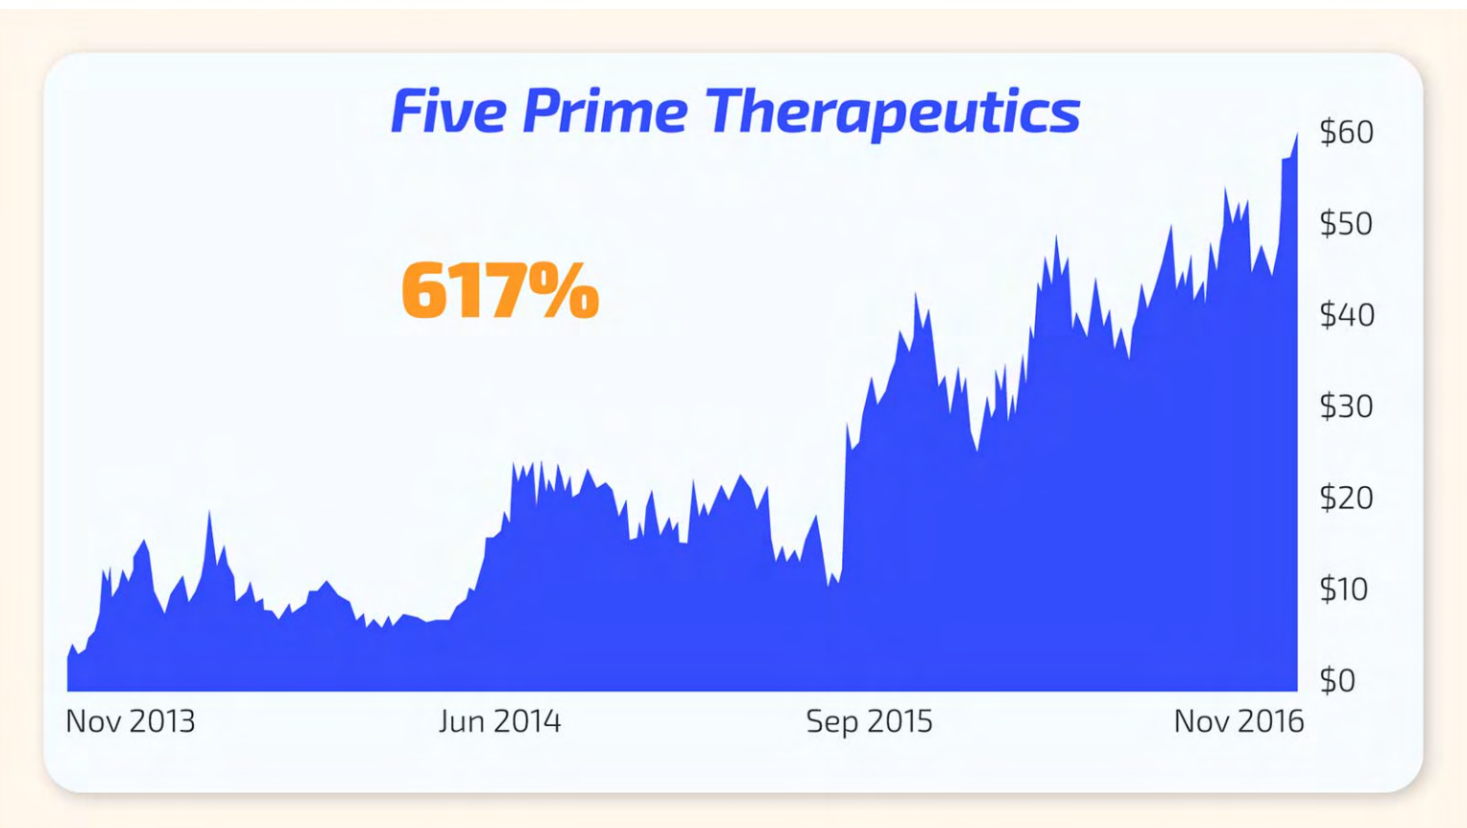
That's why I'm mad…

And why I was so thrilled when I led my readers to revenge with that 432% winner.

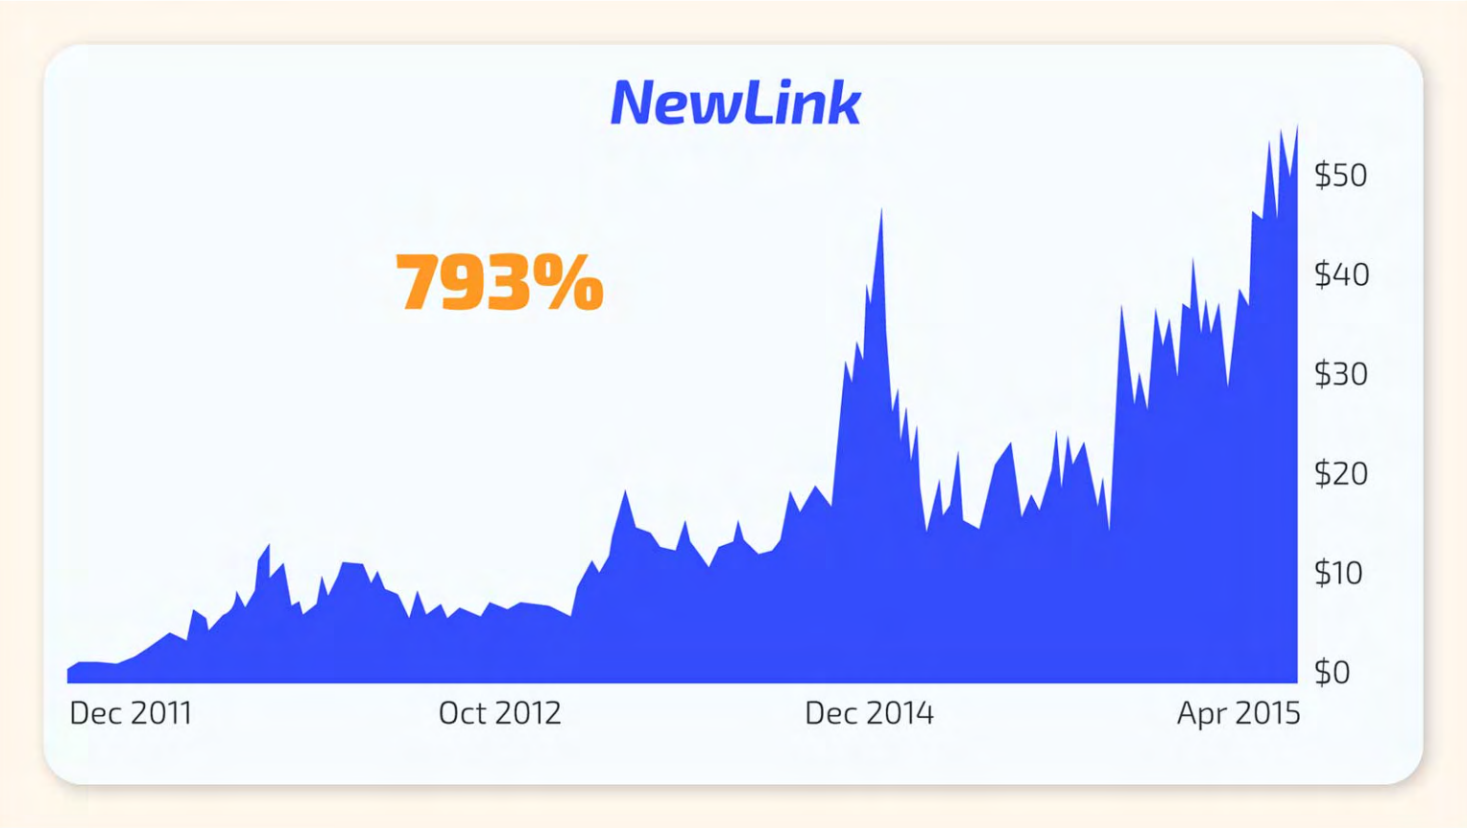
You see, these small Penny IPOs have historically offered the safest, most explosive gains regular folks can find in the market…

Gains like…

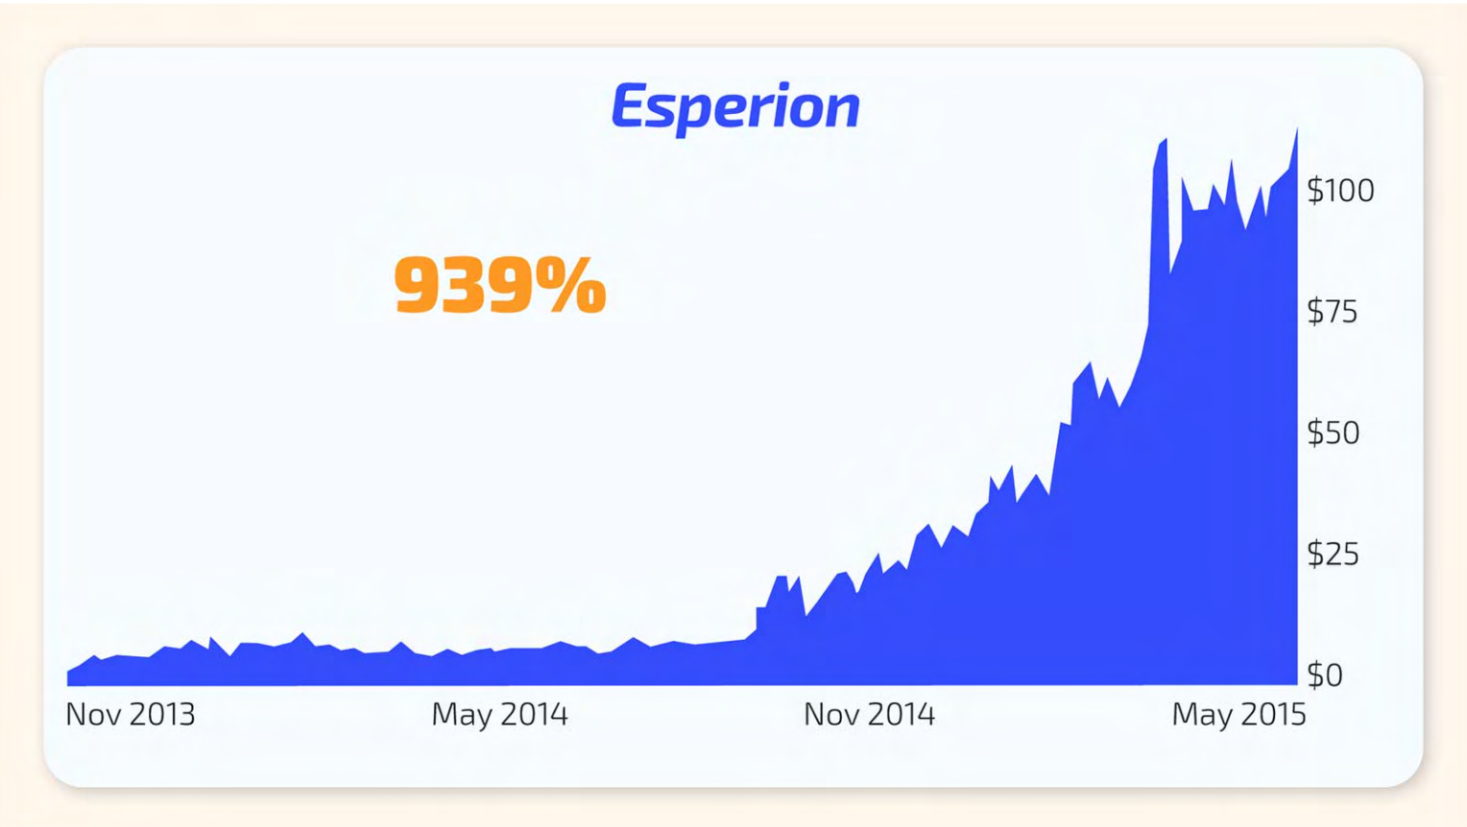
617% on Five Prime Therapeutics…



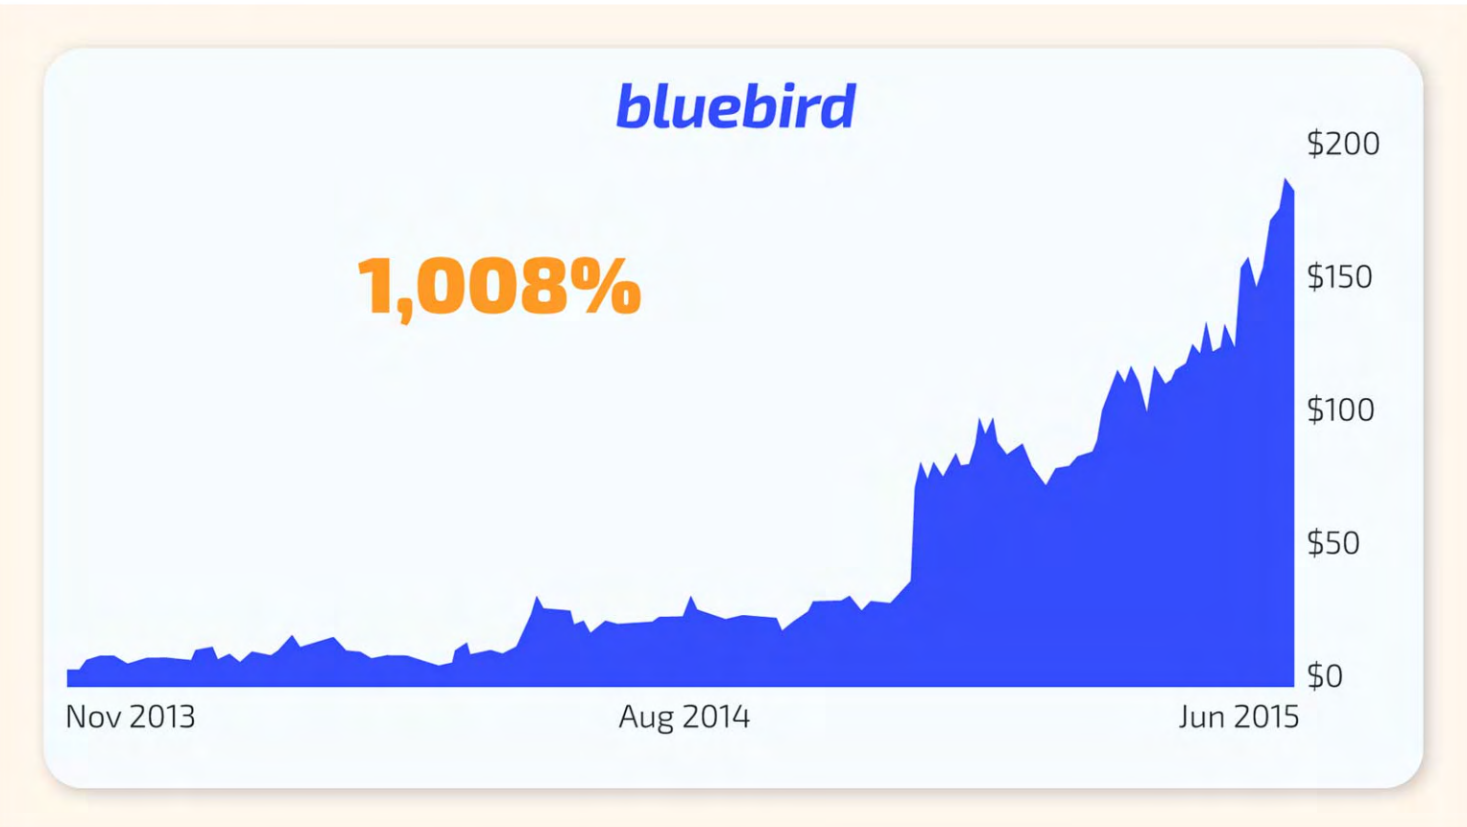
793% on NewLink…



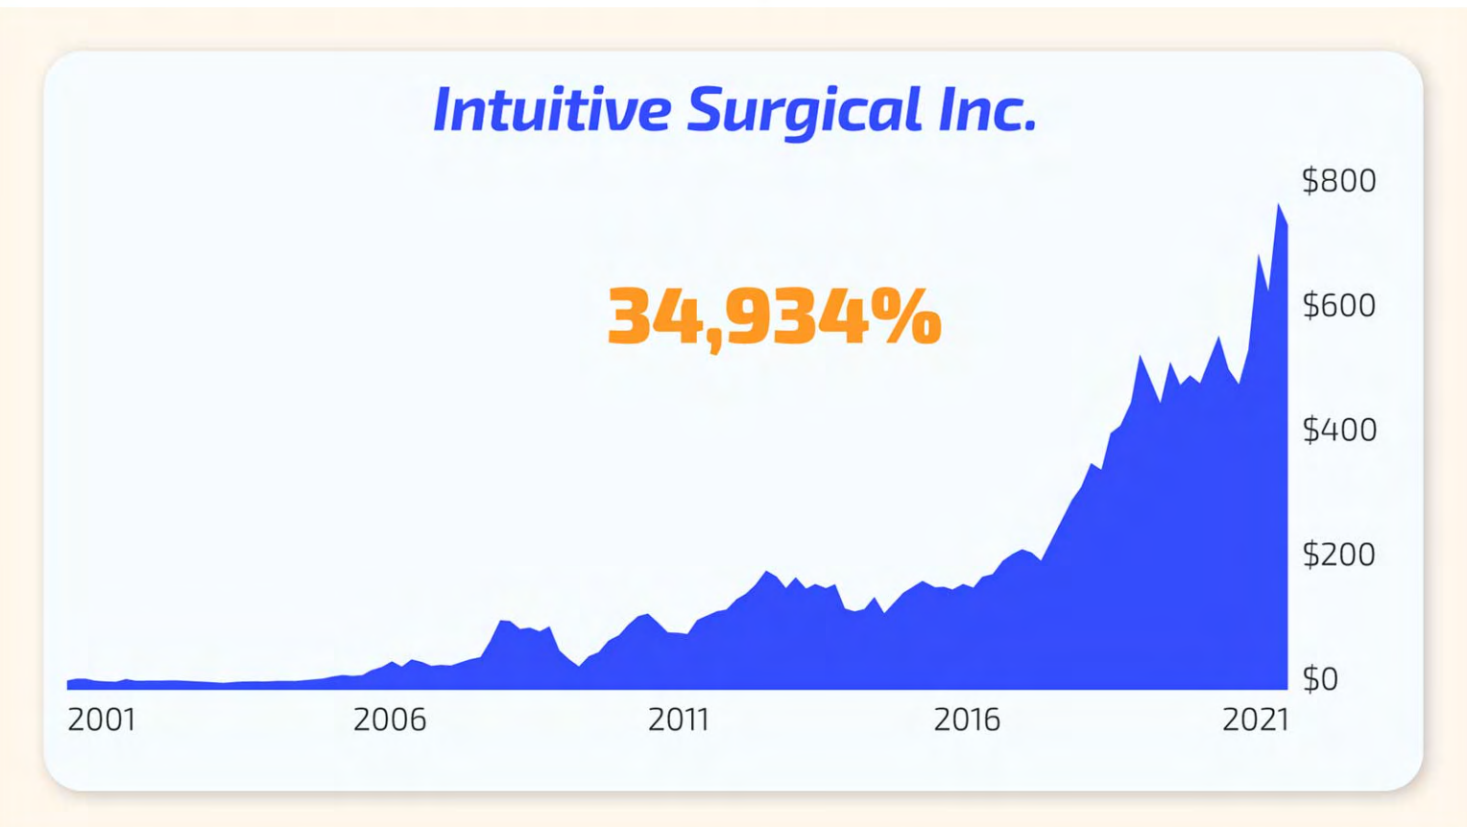
939% on Esperion…



1,008% on Bluebird…



And even as much as 34,934% on Intuitive Surgical.



Now, to be clear. I didn't recommend these last specific examples. And, obviously, I can't promise you a 34,000% gain. (That's not the norm and should not be expected.)

However, I could show you 100 nearly identical charts all showing explosive gains like these.

Proving—beyond any dispute—that Penny IPOs have safely beaten the pants off all investments over the last 10 years—*public or private!*

But, sadly, most Americans are in the dark.

They've been duped!

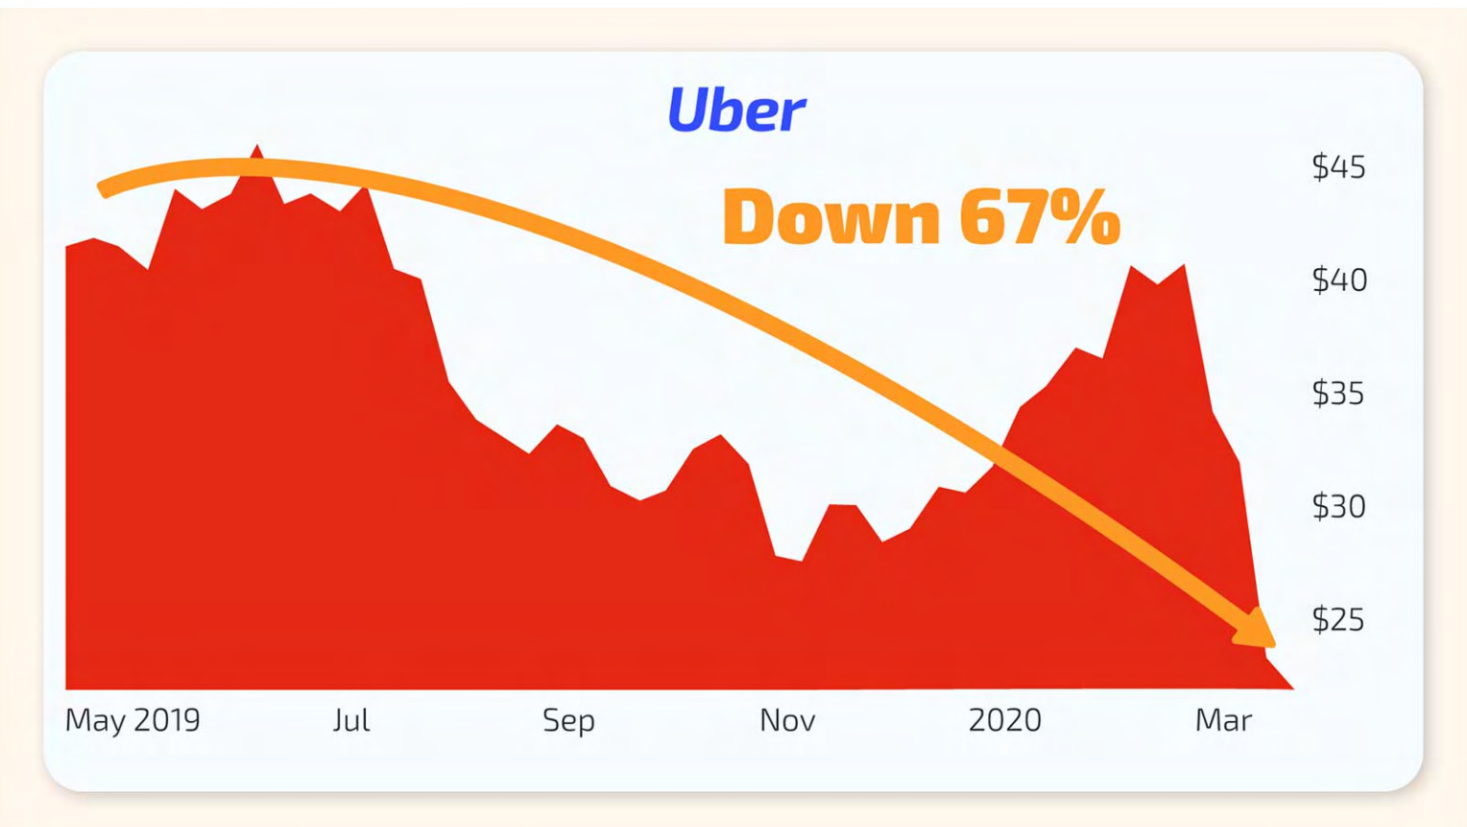
You see, everyone today has to fight over the same scraps.

This is no accident—*it's by design!*

Look…

Just think of the popular stocks that went public over the last couple years:

Bloated stocks like Uber…

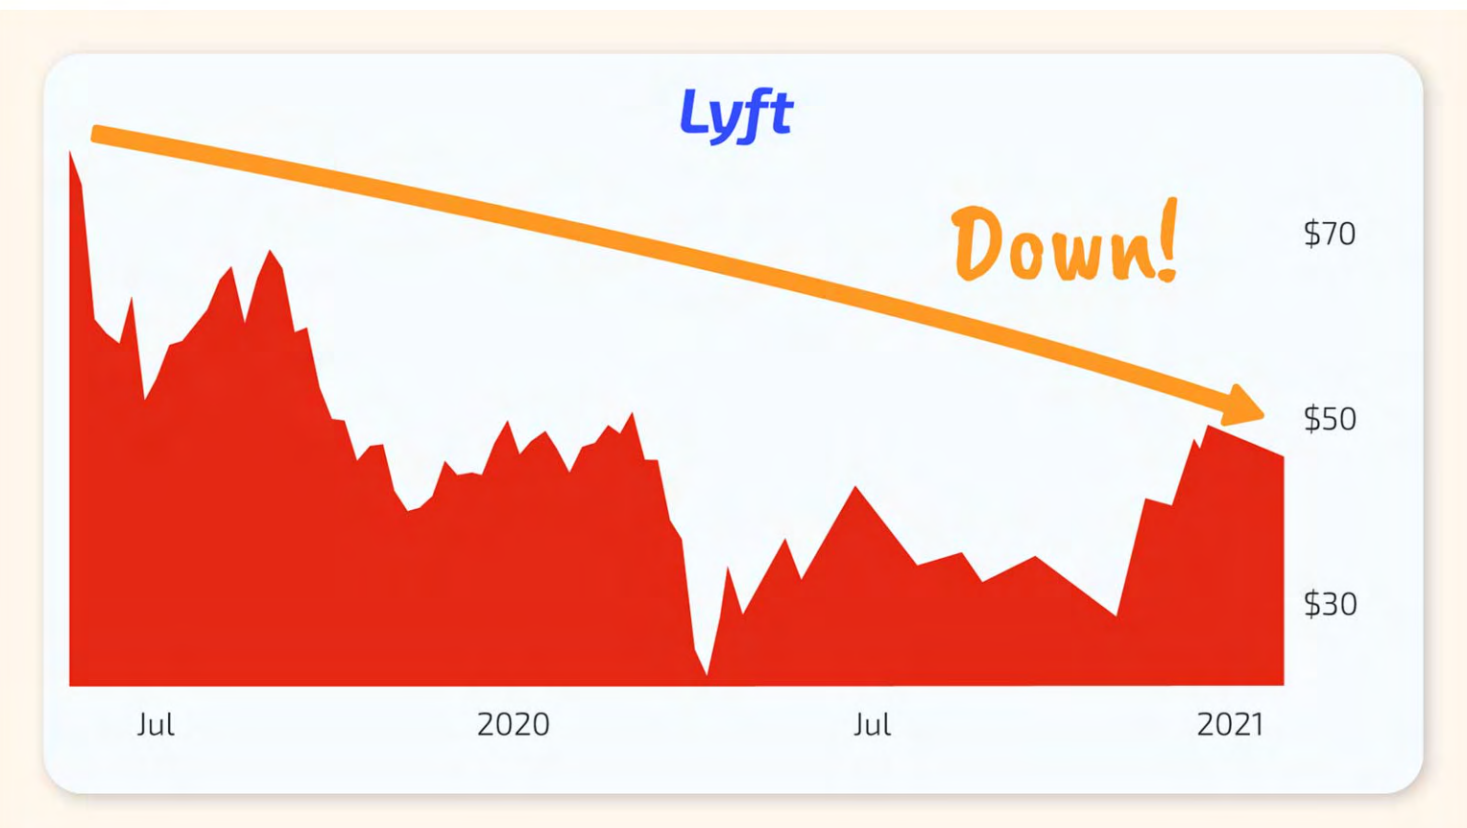


IPOed at an insane $71 billion valuation. But then dropped as much as 67% in 10 months.

Or what about Lyft?

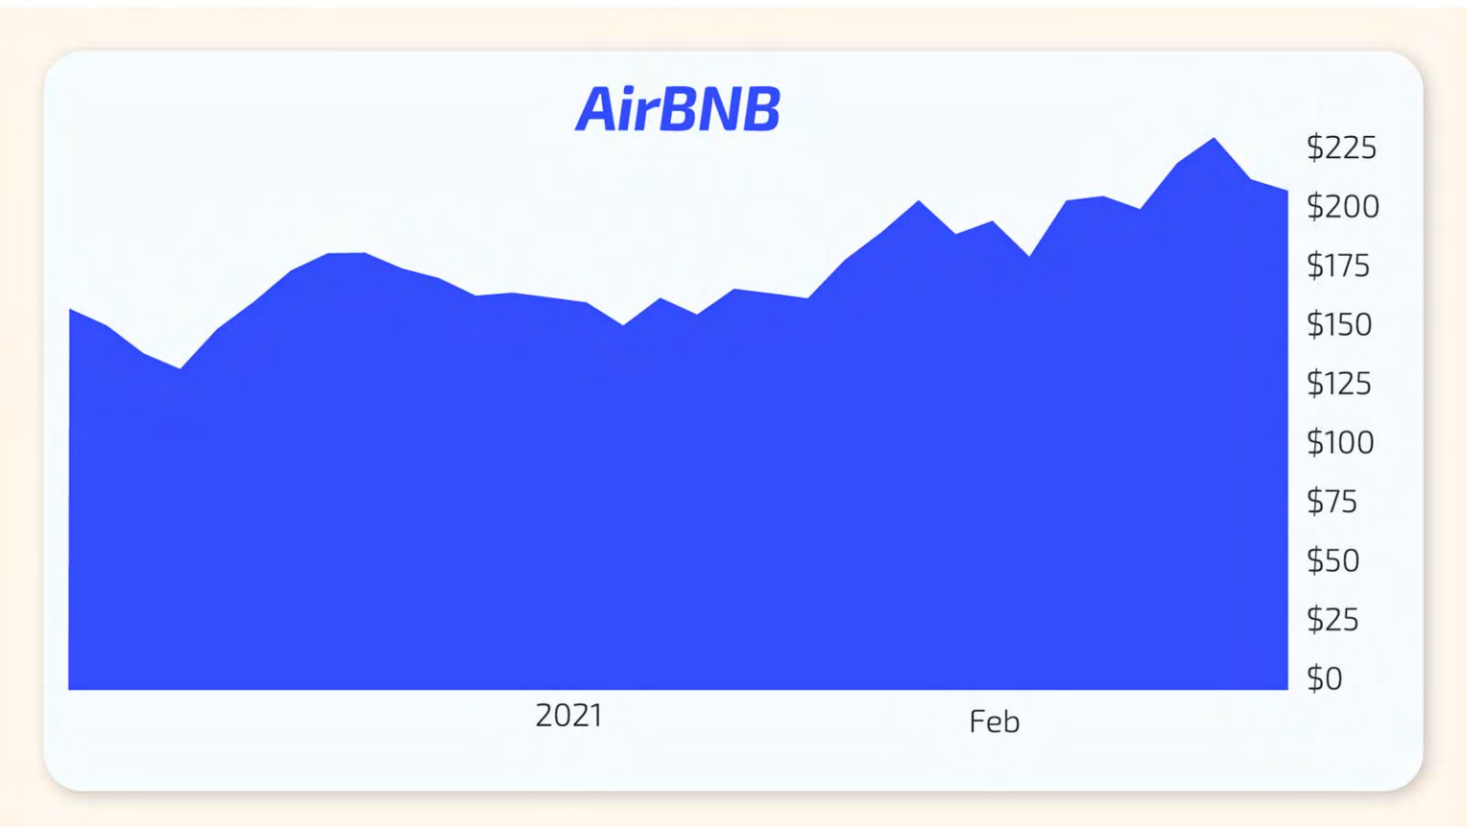
No profits in 8 years. But that didn't stop it from IPOing at $72 a share, with a greedy valuation of $24 billion.

In almost two years, the stock hasn't moved a cent. In fact, it's down as I record this by nearly HALF!



(But how many millions, do you think, the investment banks who pushed the IPO made? My back-of-the-napkin estimate is they made *$1.6 BILLION. Where's your fortune?*)

Then there's Airbnb…



Investors had been waiting years for it to go public. So far, the stock hasn't done much.

Pathetic.

The average guy who bought into the hype on day one and put money into those 3 IPOs could still be down…

Even in this record market!

This has gone on long enough.

You deserve better.

Much *better.*

Look, here's the thing…

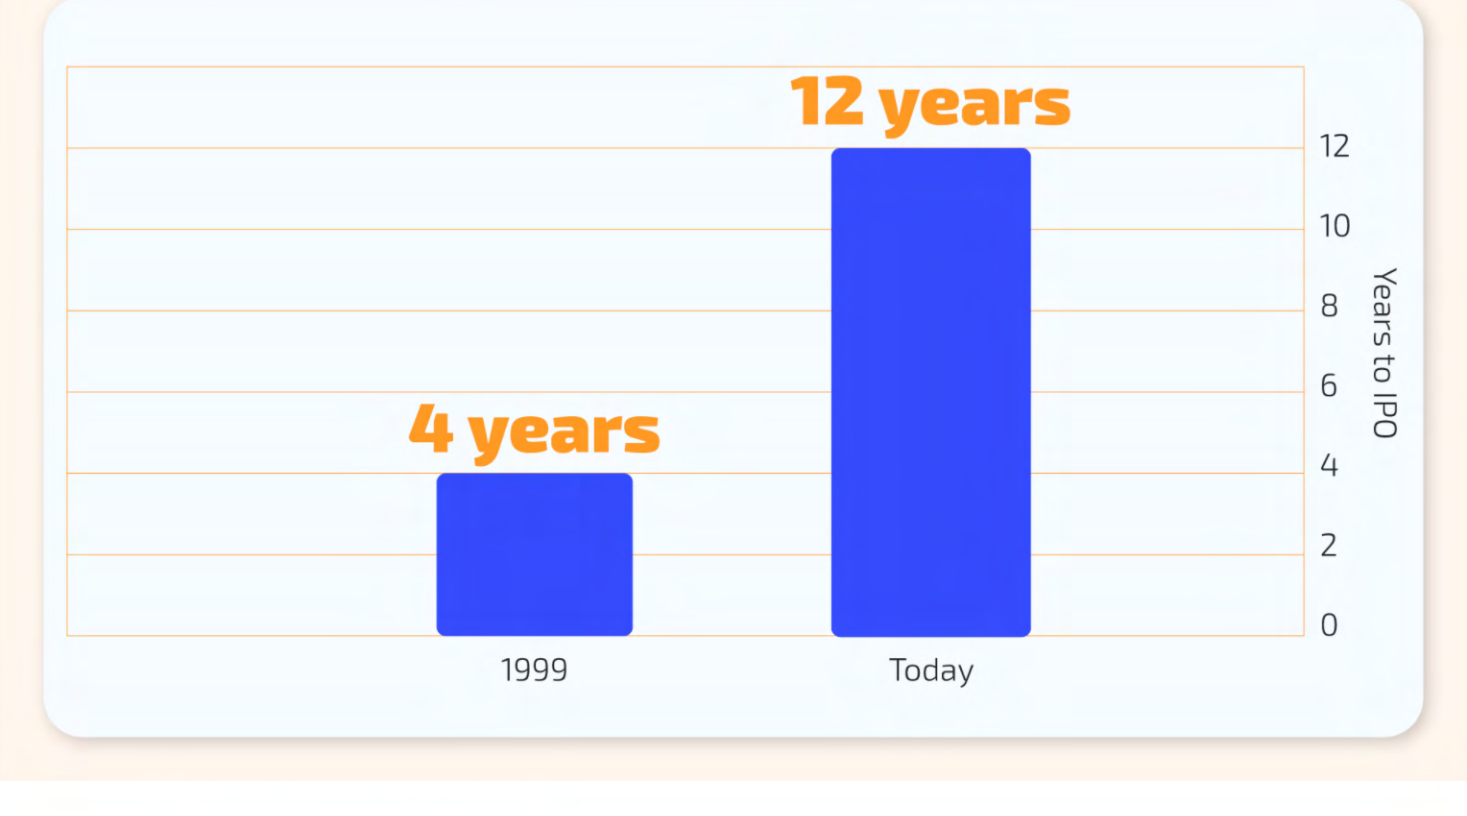
It used to be that a company went public *when it was still small.*

Amazon, for example, IPOed when the company was valued at $438 million…

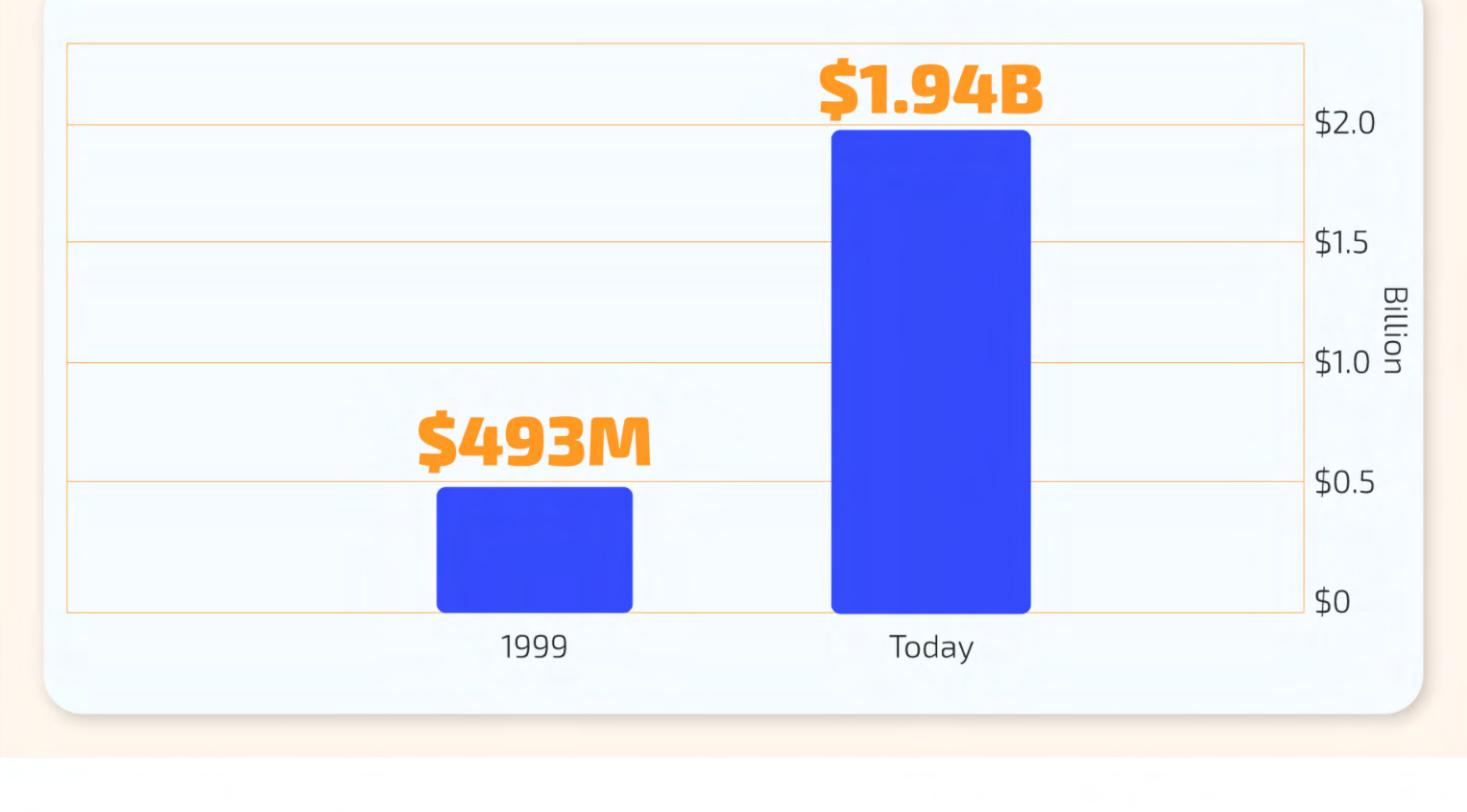
Is it any surprise that it's up over 2,000 times?

It had plenty of room to grow!

Nowadays, companies wait an average of 8 extra years to go public.

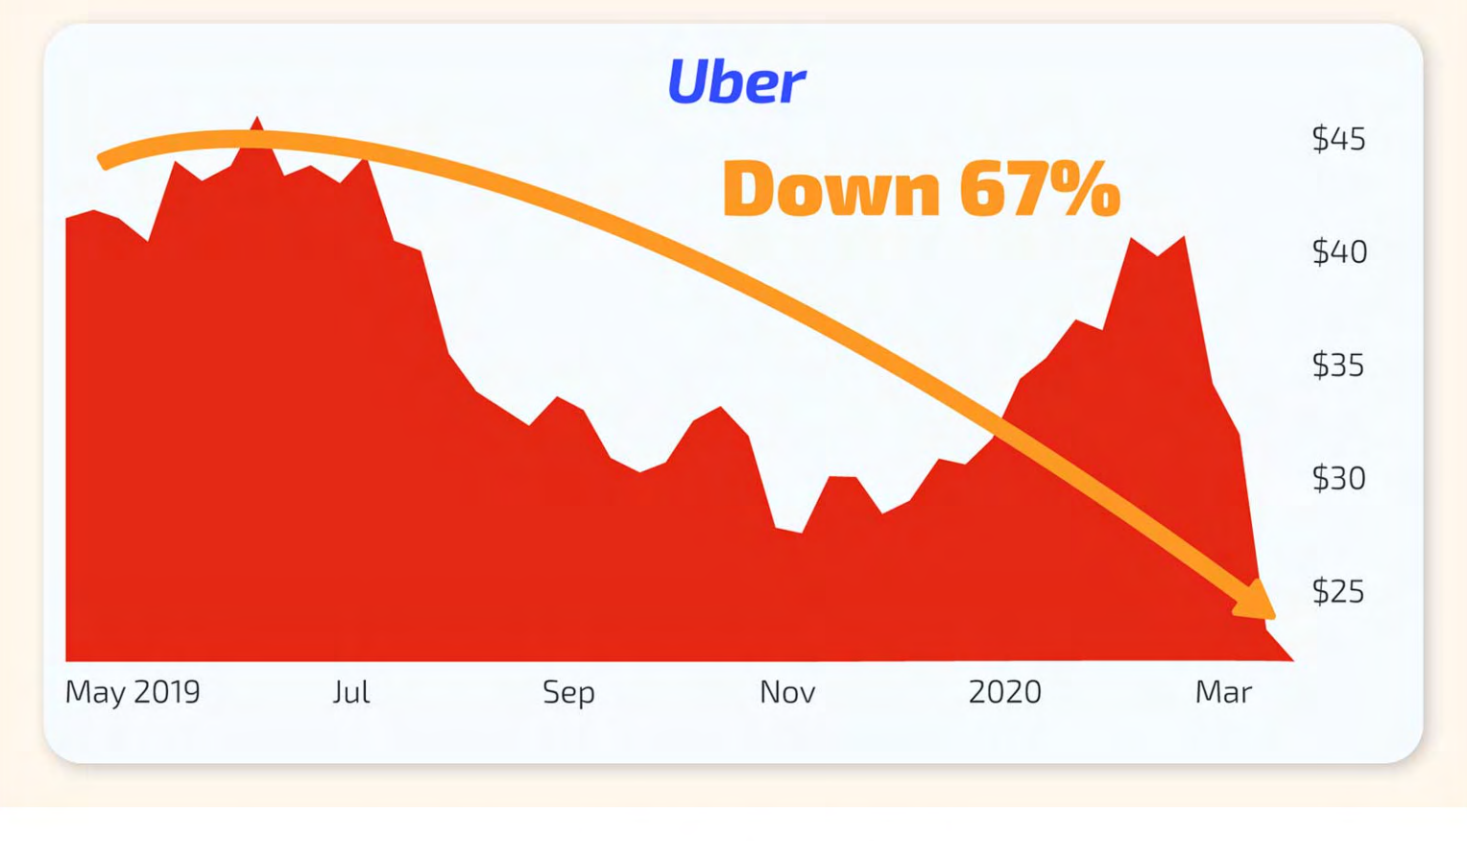


And they're 4 times more expensive!



That means, by the time the average guy today gets a shot, most IPOs today have already seen 99% of their total gains…

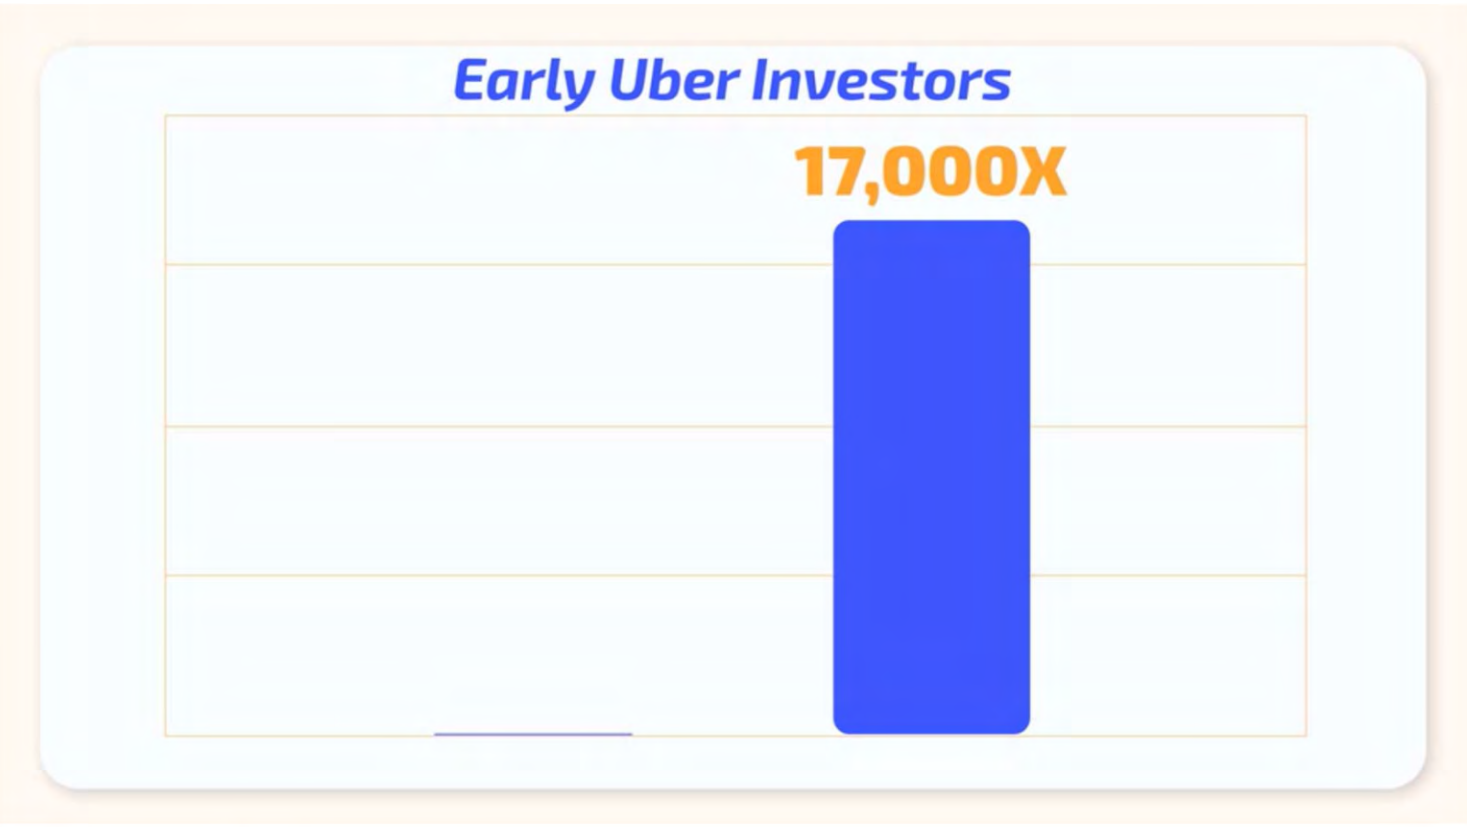
Like Uber…



As we saw, the stock went down almost 70% after its IPO…

But the early Uber investors? The ones who got in BEFORE the IPO?

They made out like bandits! In fact, their money went up as much as 17,000—*yes, 17,000 times.*



All you get are the leftovers…

Overpriced—*and overhyped!*—stocks that will take you years (or decades) before you can

turn a good profit.

That's why I'm thrilled to finally stick it to Wall Street.

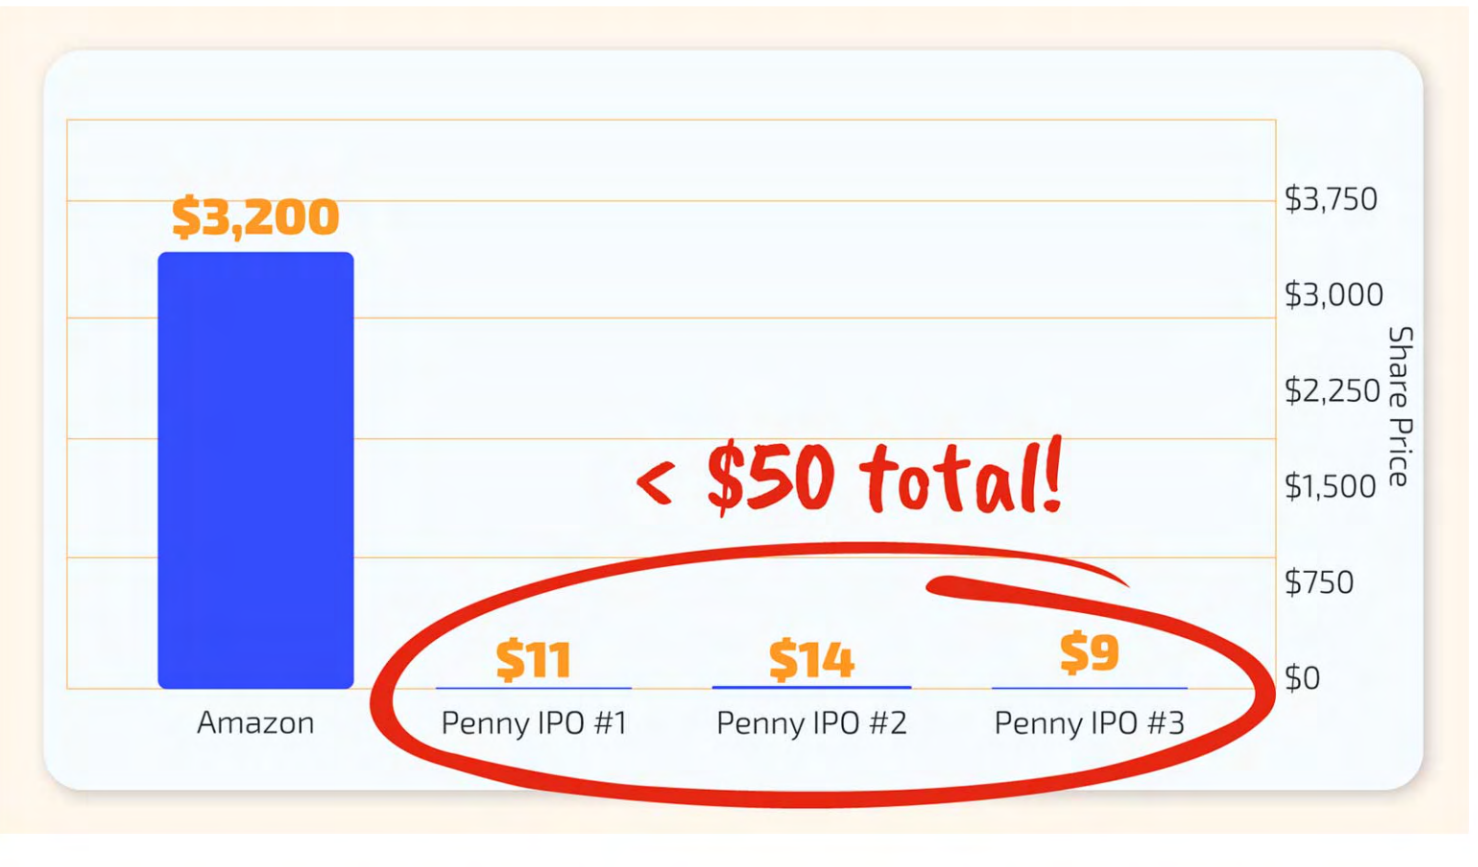
And, today—*now*—I'm going to share with you everything I know about Penny IPOs…

Including how you can get the names and ticker symbols of the 3 best "Penny IPOs" I've found…

Each is roughly the same size—*or smaller*—than Amazon was when it first went public.

And unlike Amazon, which currently sells for over $3,000 per share…

You can buy a stake in all three Penny IPOs for less than $50 total!



Get ready, because today we're going to explore the hidden world of dirt-cheap, high-octane Penny IPOs that move fast… are backed by tech moguls like Gates and Bezos… and go public almost every week!

"The Only Man We Know of Who Picked The #1 Tech Stocks of 2016, 2018, 2019—and 2020! (Based on return)"

My name, by the way, is Jeff Brown.

If you're watching this video, chances are you've heard of me before.

Last time I checked, over a million readers subscribed to my *Bleeding Edge* newsletter and *Near Future Report* research service.

That's enough to fill up every single seat in Madison Square Garden—*45 separate times…*

Ajay Suresh, from New York, NY, USA

Over 9 million people have now seen the Tech Minute interview I had with Chris Hurt…

Tech Minute

And, according to my intel, *The Near Future Report* is currently the most widely read technology research service in the world.

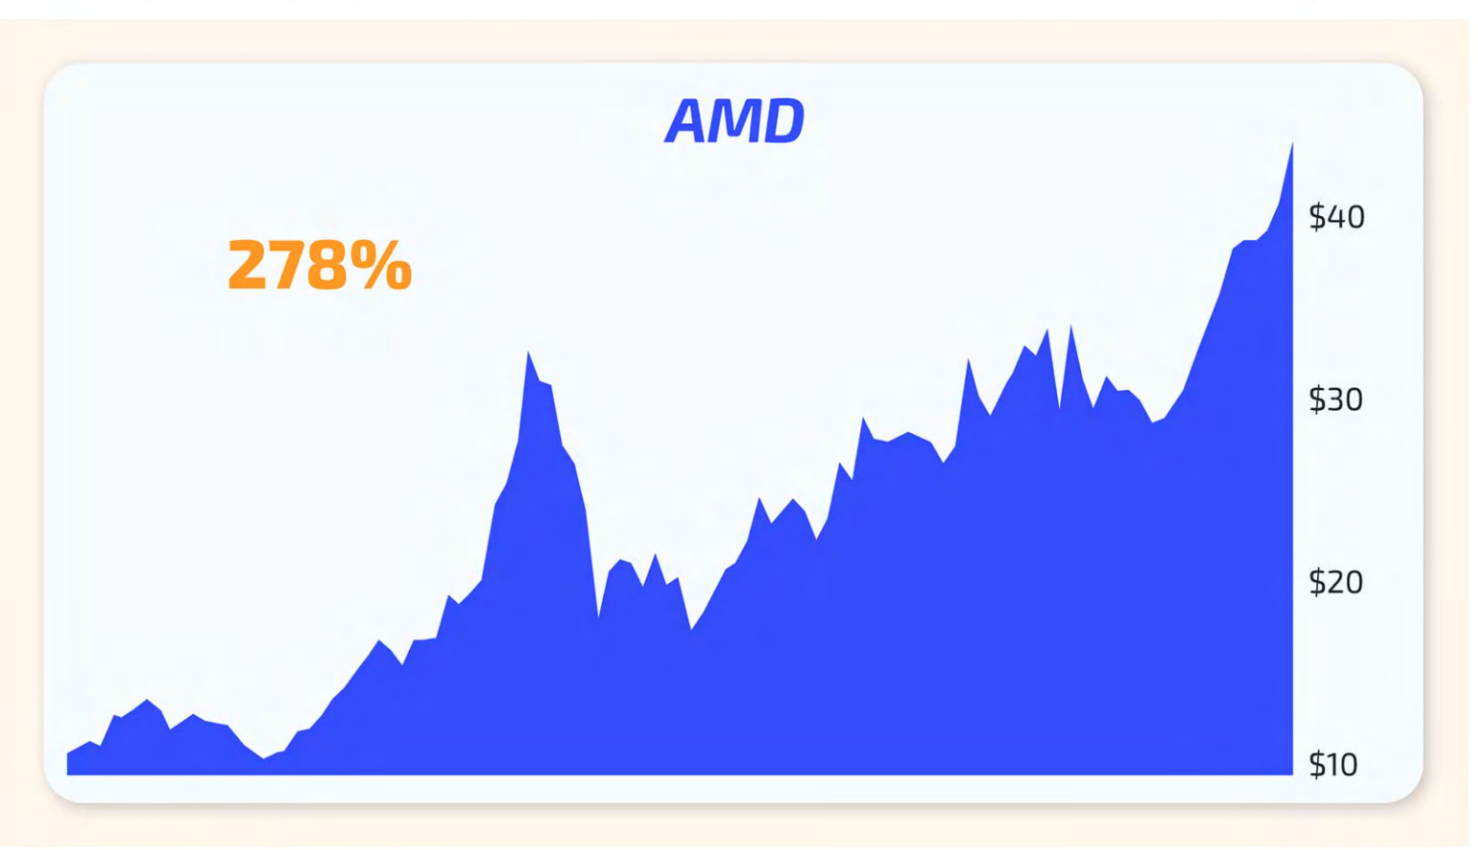
And my track record is second to none.

In fact, based on return, I successfully picked the #1 tech stock on the S&P 500, not once, twice, but four times over the last 5 years!

In 2016, 2018, 2019, and 2020.

I was also among the first to pick the big movers in this current 5G boom…

And—recently—my readers had the chance to cash out of AMD with a monster 278% gain.



To put that into perspective…

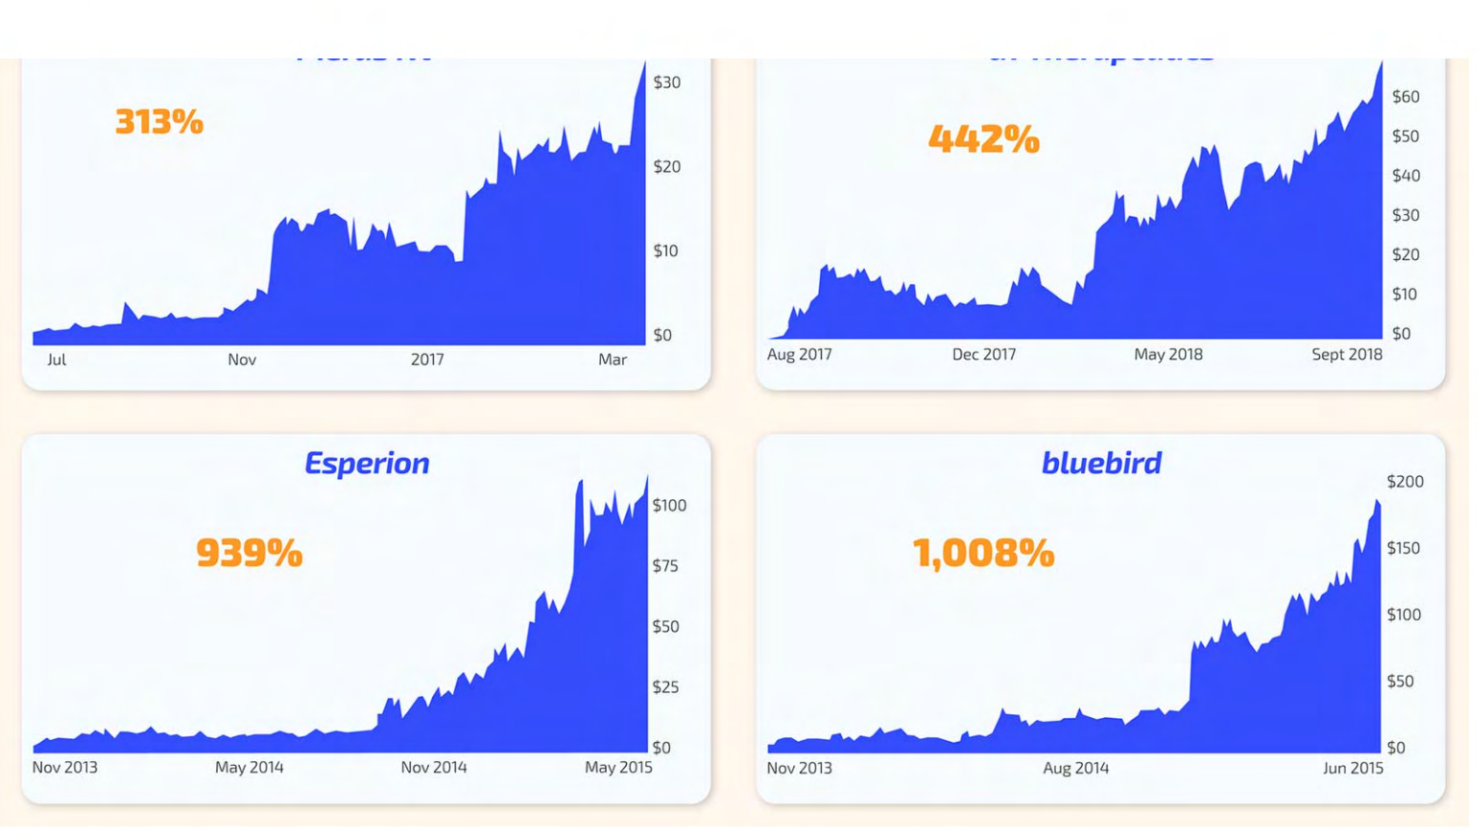
You would have to wait *20 years* to get the same return in the broader stock market.

So, how do I do it?

Well, because I am an insider in the tech world—having participated in dozens of early-stage deals and as a former exec at companies like Qualcomm and NXP Semiconductors—I have a bit of an unfair advantage…

Plus, there's something I've never shared publicly before…

It's a way to consistently find and tap into early "Amazon-like" Penny IPO stocks that can shoot up hundreds—often thousands of percent—in a short amount of time.



And I came about this discovery quite by accident…

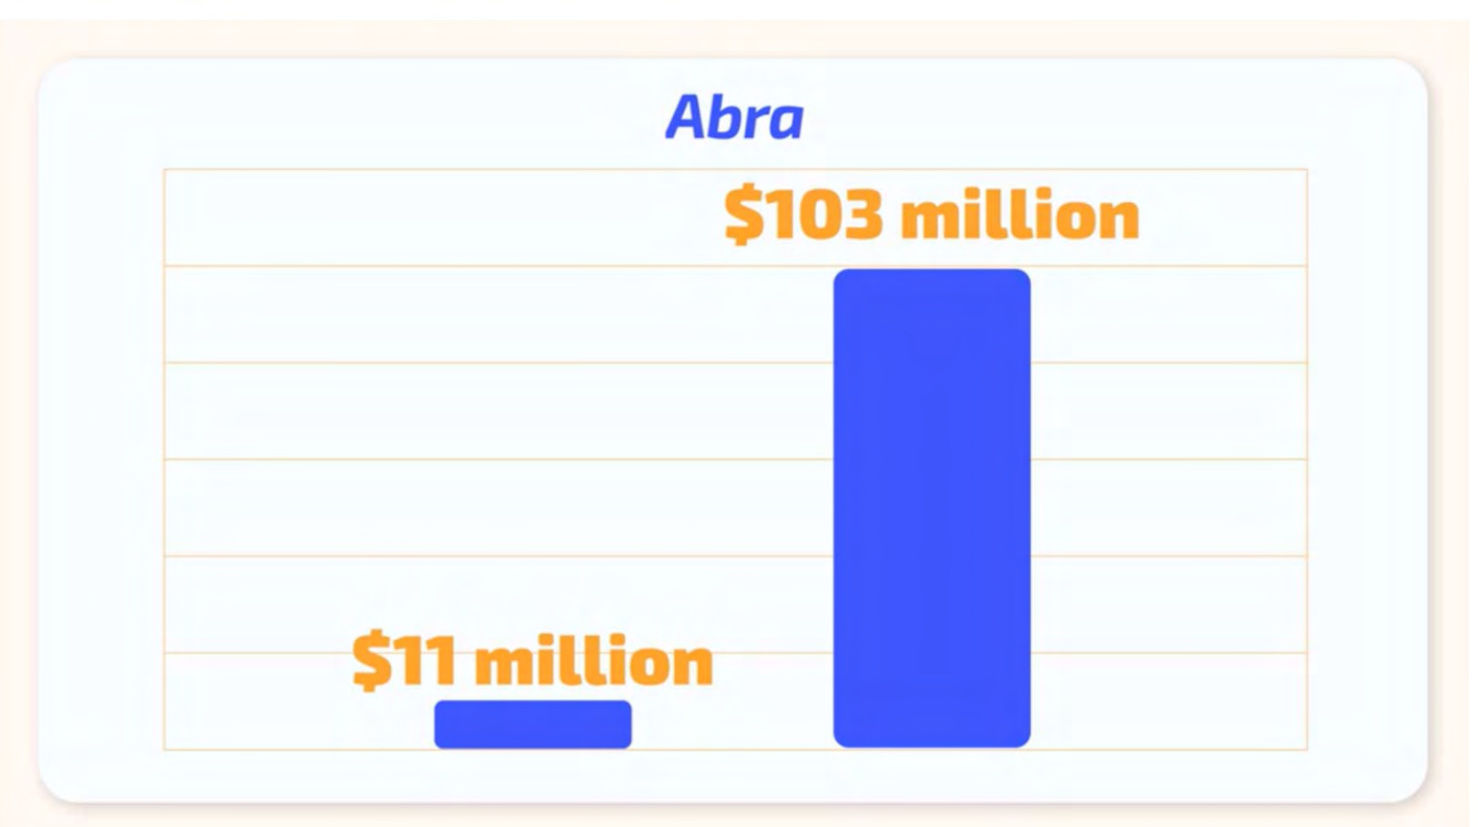
How I Accidentally Stumbled Onto Penny IPOs…

You see, I've personally invested in dozens of private deals.

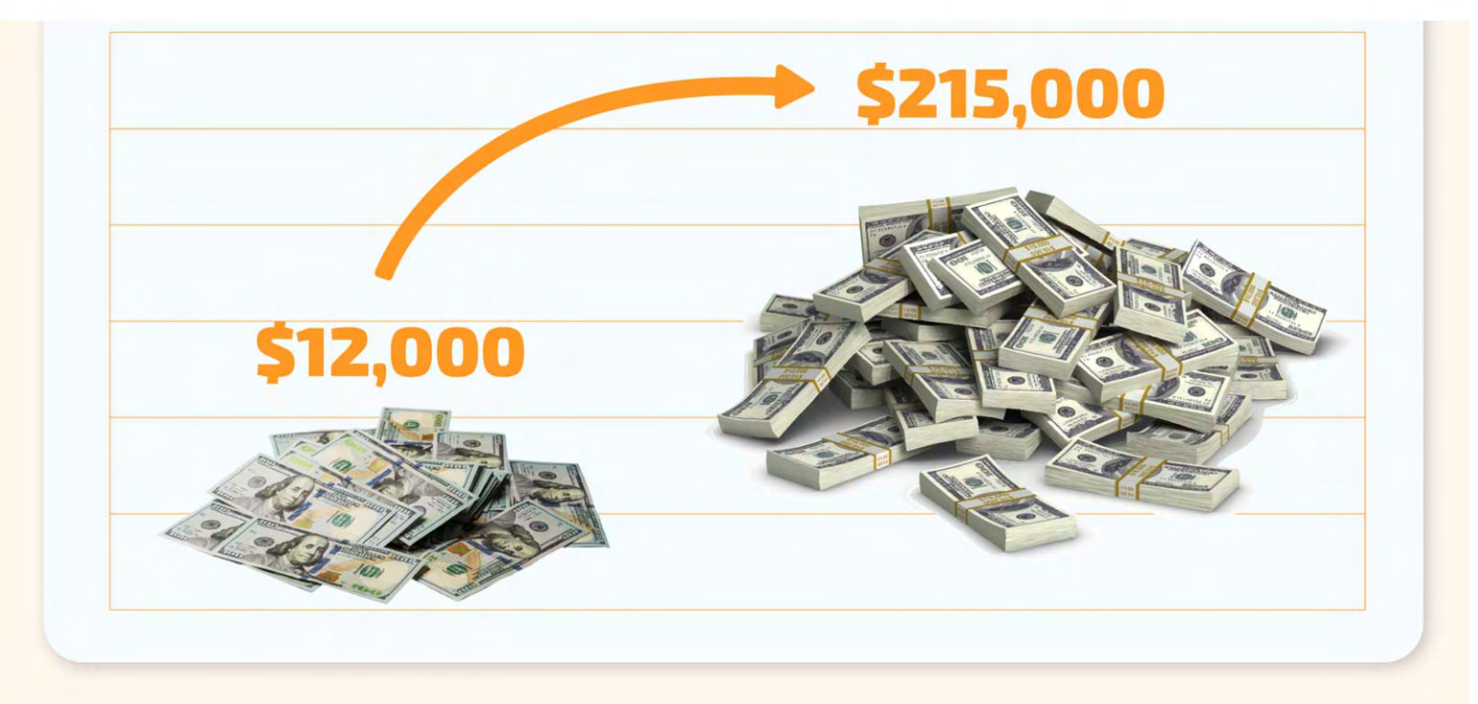
All told, the companies I've invested in are now worth over **a staggering $20 billion**.

So, the explosive power of early-stage investments wasn't lost on me.

For example, I was one of the first to invest in Abra, a new digital wallet provider. I invested when the company was valued at just $11 million. Today, Abra has shot up almost 10-fold to $103 million…



I also put $12,500 into a small company called Intabio. Last time I checked, my stake had climbed to $215,000…



That's how you make big money.

By taking an early stake in quality companies and being an early-stage investor.

But here's the dilemma I faced…

I knew most of my followers couldn't participate in these lucrative deals.

First, many weren't accredited investors (meaning, they weren't millionaires) …

Second, even if they were, most of these deals have limited space. And you need the right connections to get in!

That's when I started looking for a different solution…

I decided to dig into early-stage IPOs. Because anyone—accredited investor or not—can buy a publicly traded company.

The question, however, was…

Among all the overpriced junk, were there still quality companies going public at bargain prices?

Now, *share price* wasn't really a concern for me.

The real factor was *how each company was valued.*

That was the ultimate key to finding a bargain…

(I mean, Amazon would have still risen from half a billion… *to more than $1 trillion…* whether it IPOed at $1, $10, or $30 a share.)

That's where most investors get it wrong.

It's the valuation that matters!

In other words, the value (or size) of the company often dictates how much room it has to grow.

That's why I prefer to focus on stocks with a very small enterprise value…

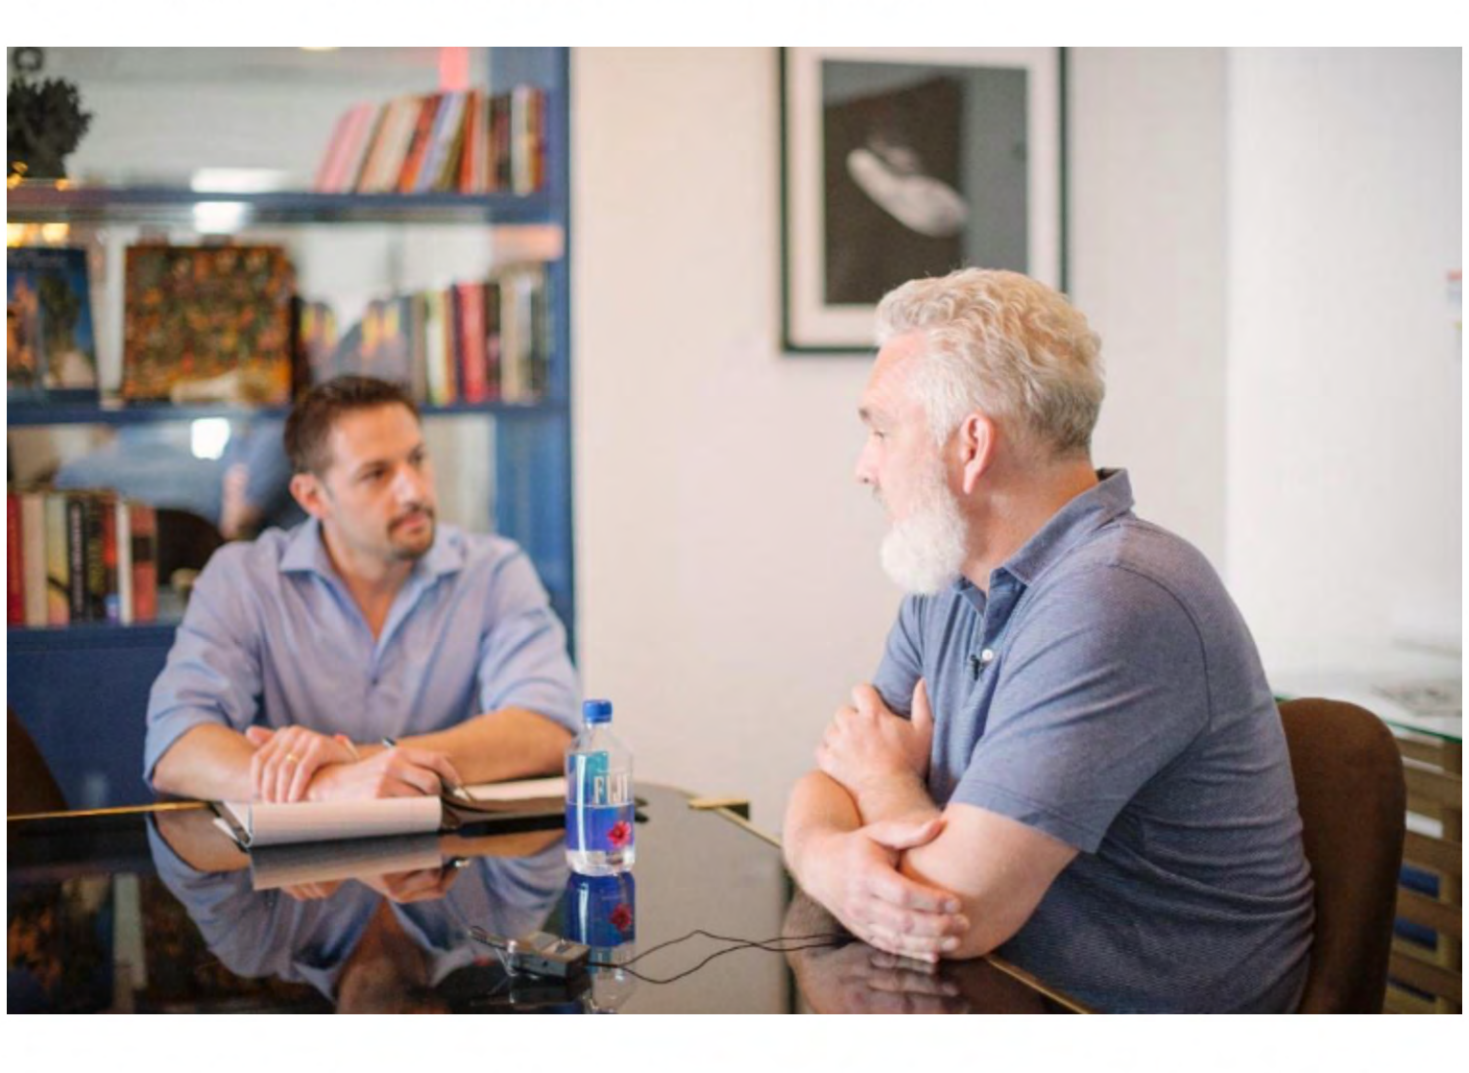
Now, often, these also have very cheap share prices. (One of my top Penny IPOs, for example, trades right now for under $10 a share)

But the question was: Where to begin?

There are currently around 630,000 total stocks worldwide.

And many small companies go public every year…

So, the first thing I needed to do was weed out all the trash.



My research team and I wanted to pinpoint quality "early Amazon-like" deals trading for dirt cheap…

So, we applied 3 filters:

1. We wanted to look only at companies trading on American exchanges…
2. We wanted only companies that had solid VC backing.
3. Last, I wanted to focus solely on *tech companies*—my area of expertise for the last three decades. By doing so, I could easily separate the wheat from the chaff.

When we did that, our universe of stocks plummeted from 630,000 down to 1,195.

Still, at first, it was a jumbled mess. And we considered giving up our search…

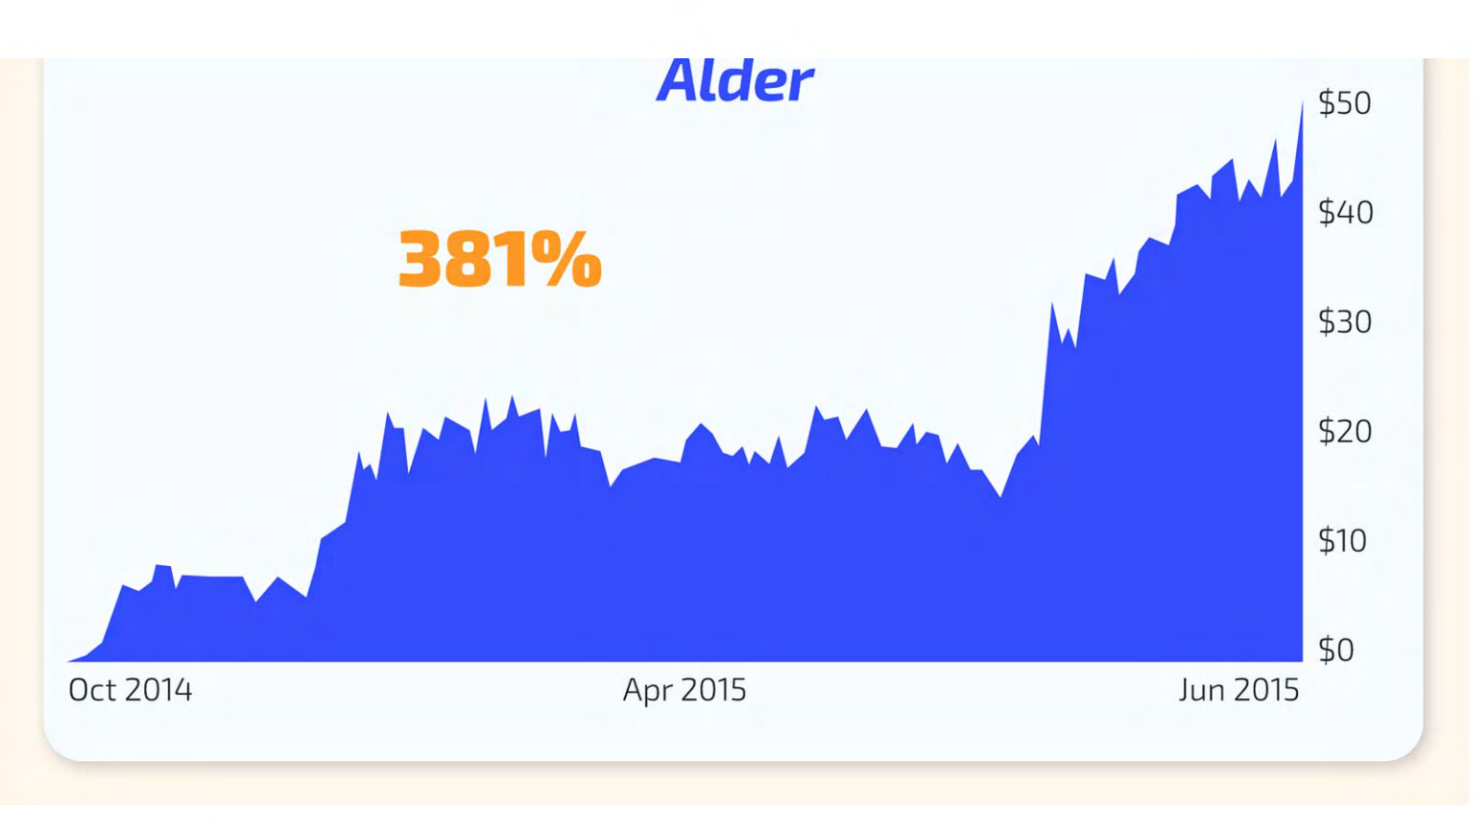
However, after looking at 87,600 hours— over 5 million minutes—of market data…

A 5-year labor…

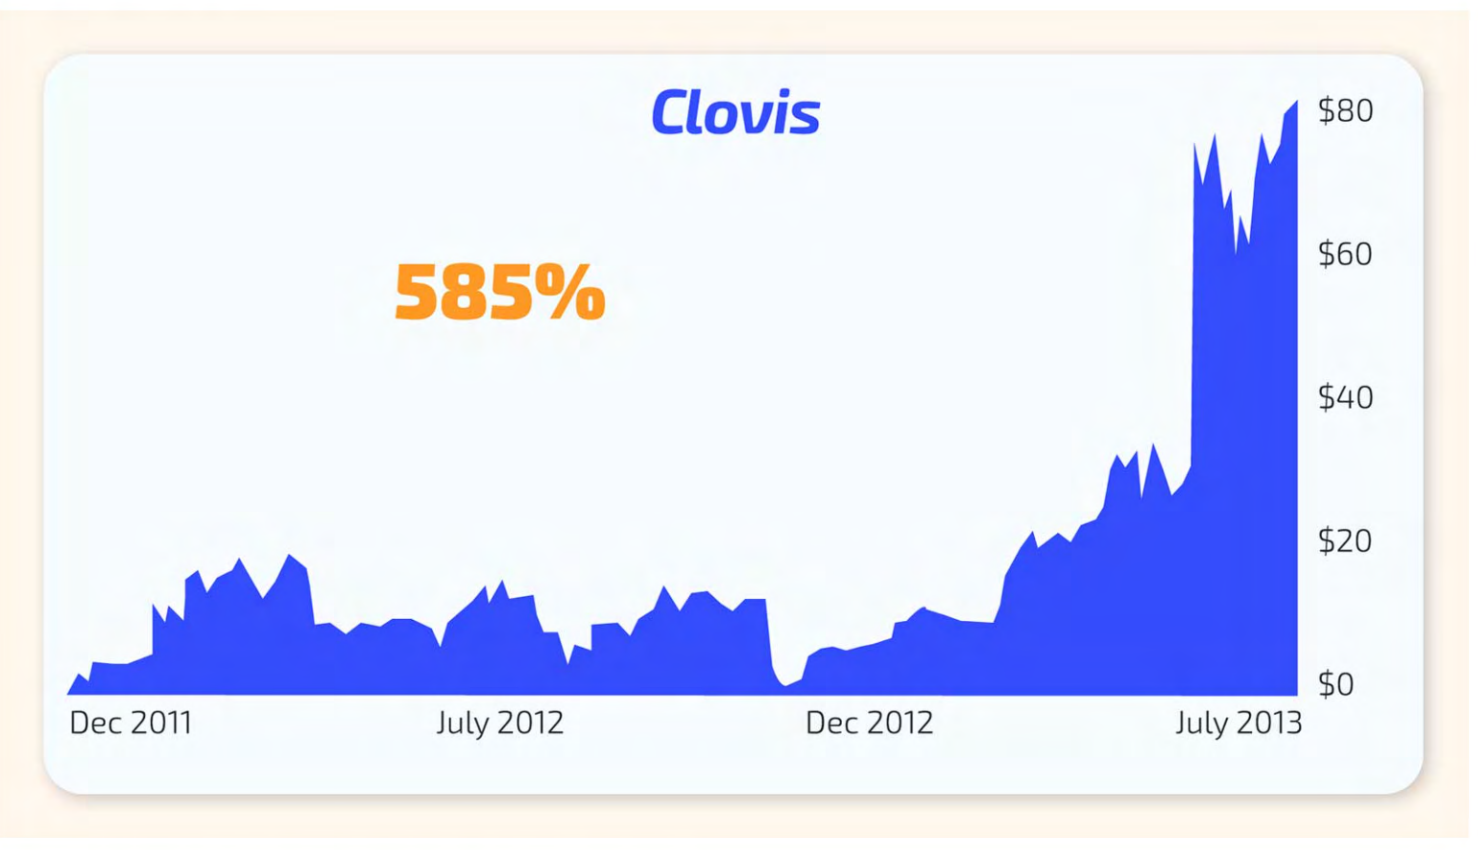
We eventually made a breakthrough…

We were able to pinpoint a small number of IPOs that greatly outperformed the rest!

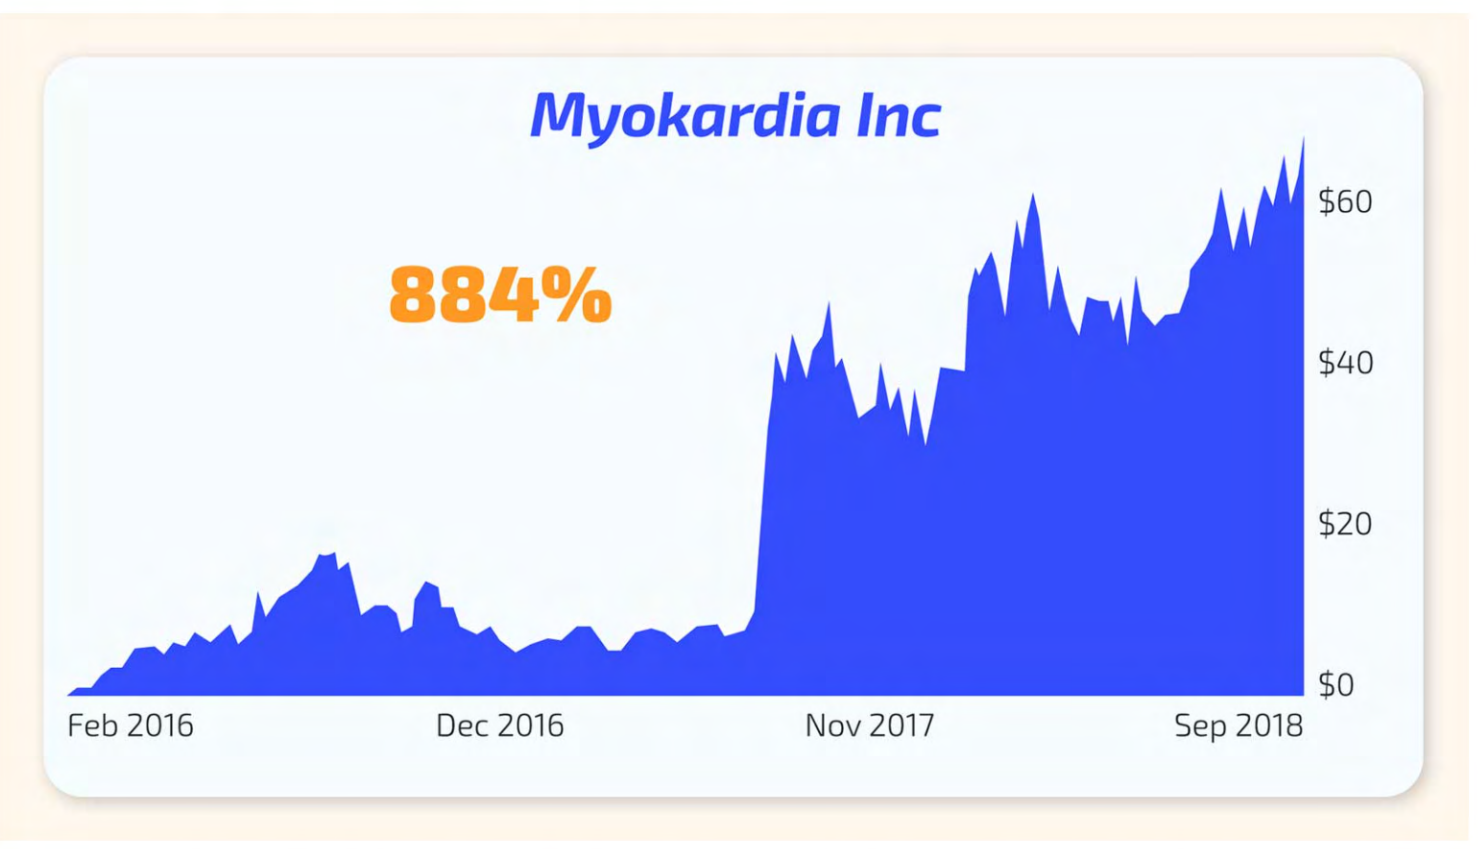
Alder, for example, went up 381%…



Clovis rose 585%…



And Myokardia climbed 884% in short order…



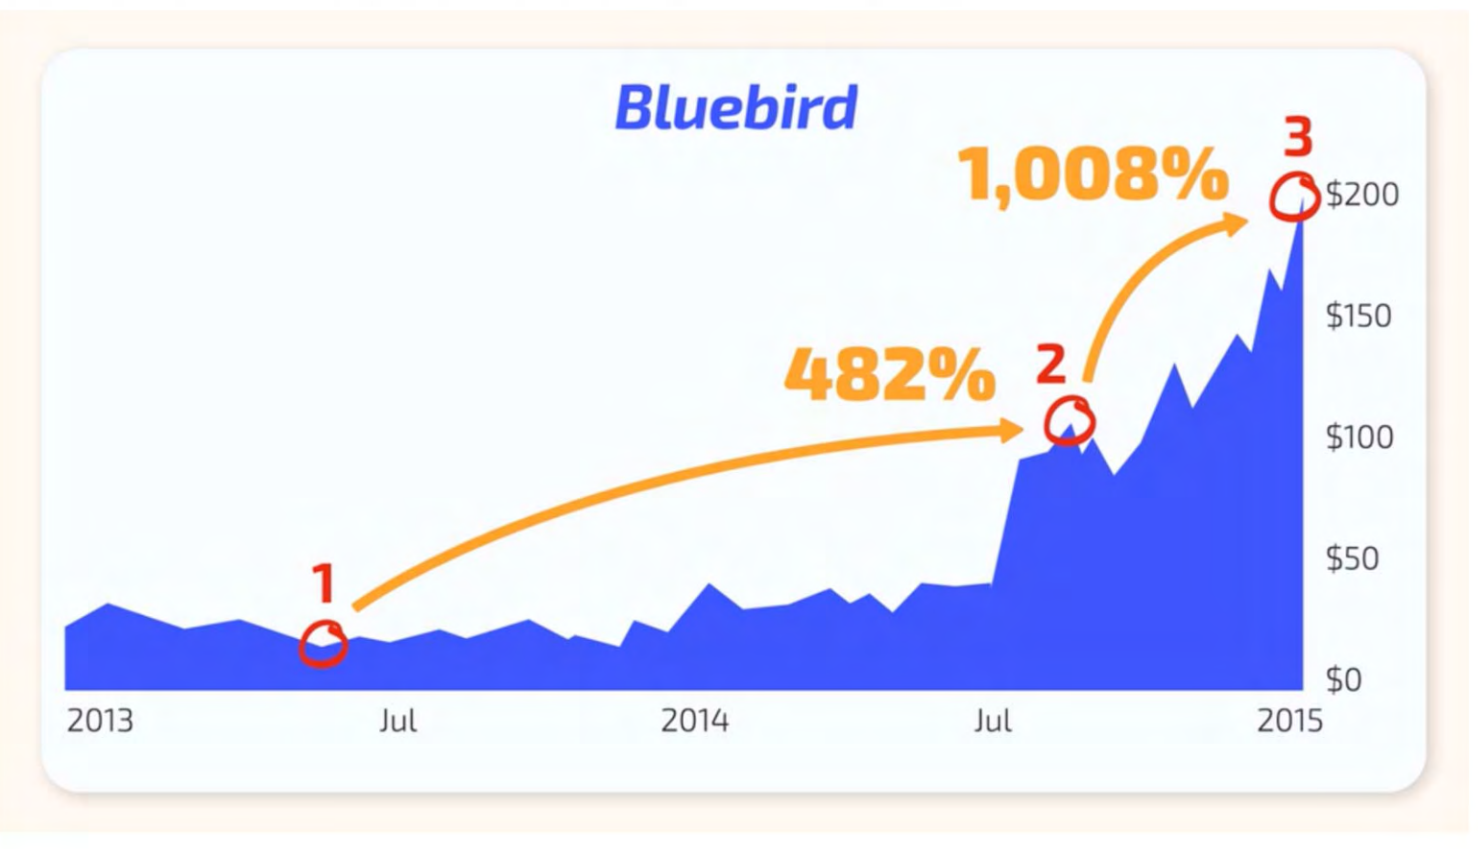
Most of these Penny IPO stocks—like Synthorx, which I mentioned earlier—were names 99.99% of investors had never heard of…

But we didn't care.

Because what they offered was truly extraordinary…

You see, on top of these huge gains, every single one of these stocks exhibited a "clockwork" like pattern!

Like Bluebird, a penny IPO that went public back in 2013…



Follow the numbers:

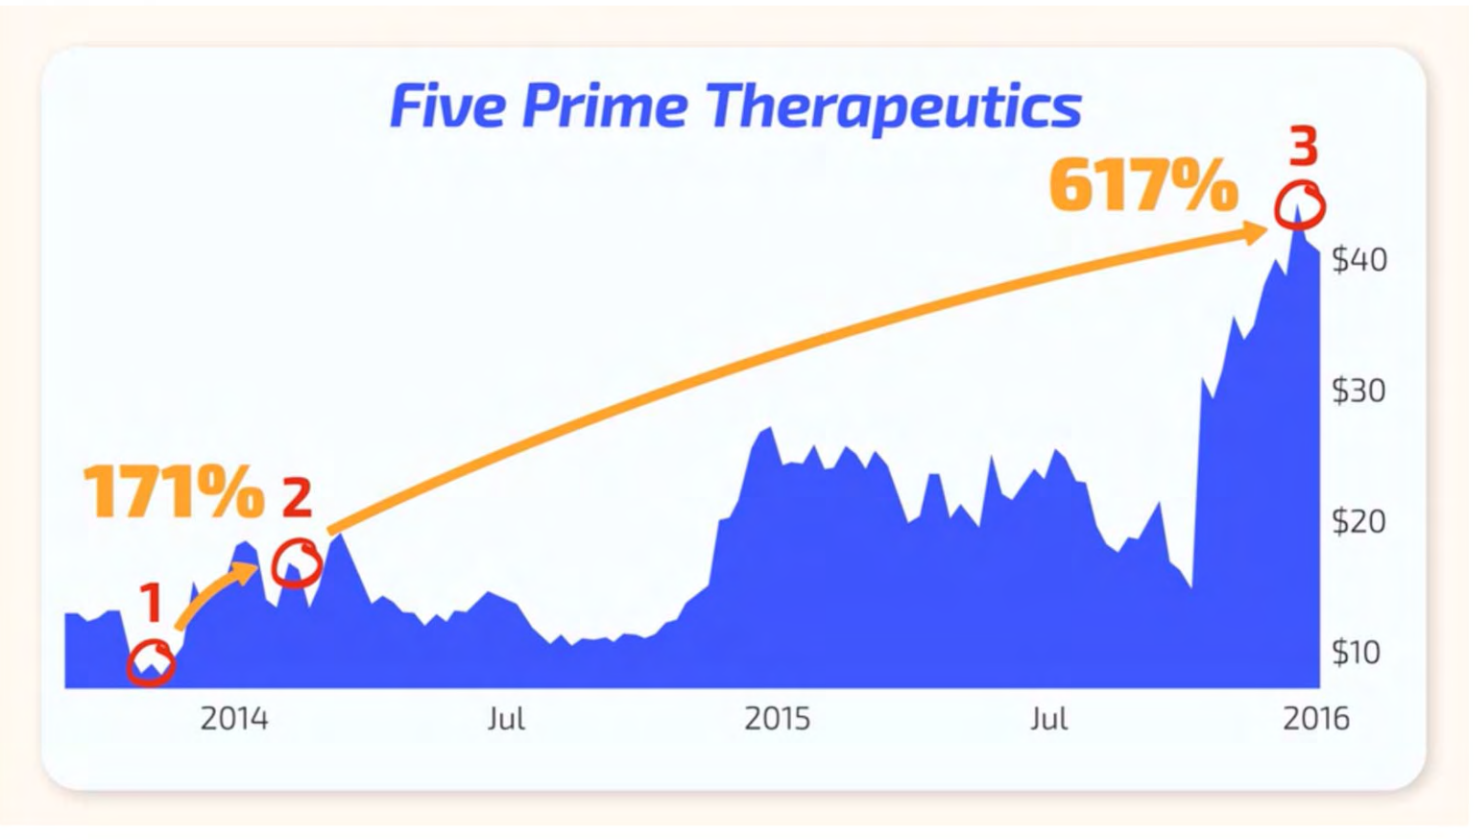
1. As you can see, after a small initial surge, Bluebird experienced a pullback. This is the perfect time to buy…
2. From there, it quickly rose up to a first big spike…
3. After that, an even bigger spike followed. *A 1,008% gain!*

1—2—3. Chart after chart after chart!

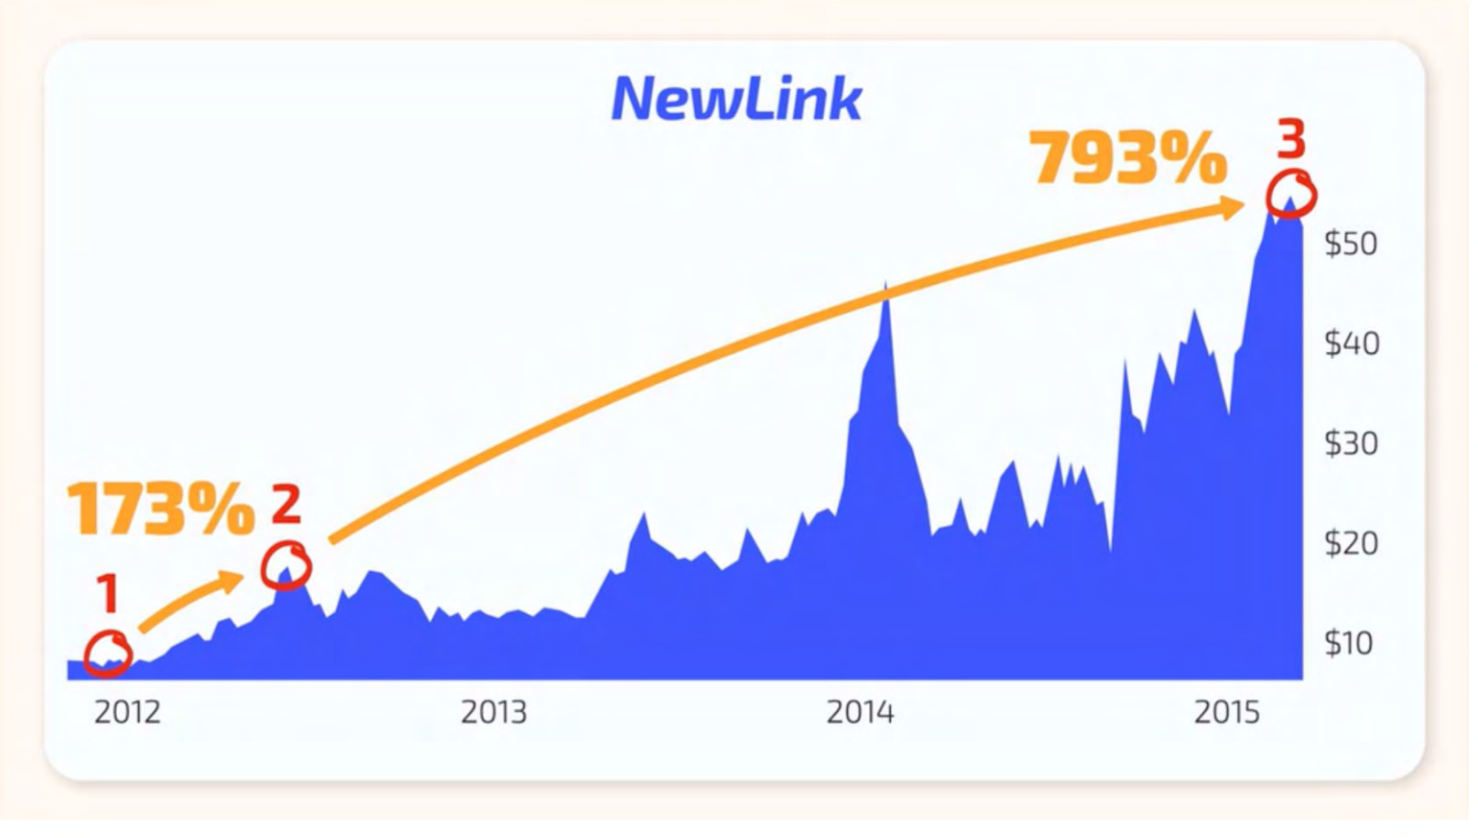
Now, if only one or two of these Penny IPOs we found did this, fine…

But, in our back-test, we found 88 stocks that followed the *exact same pattern.*

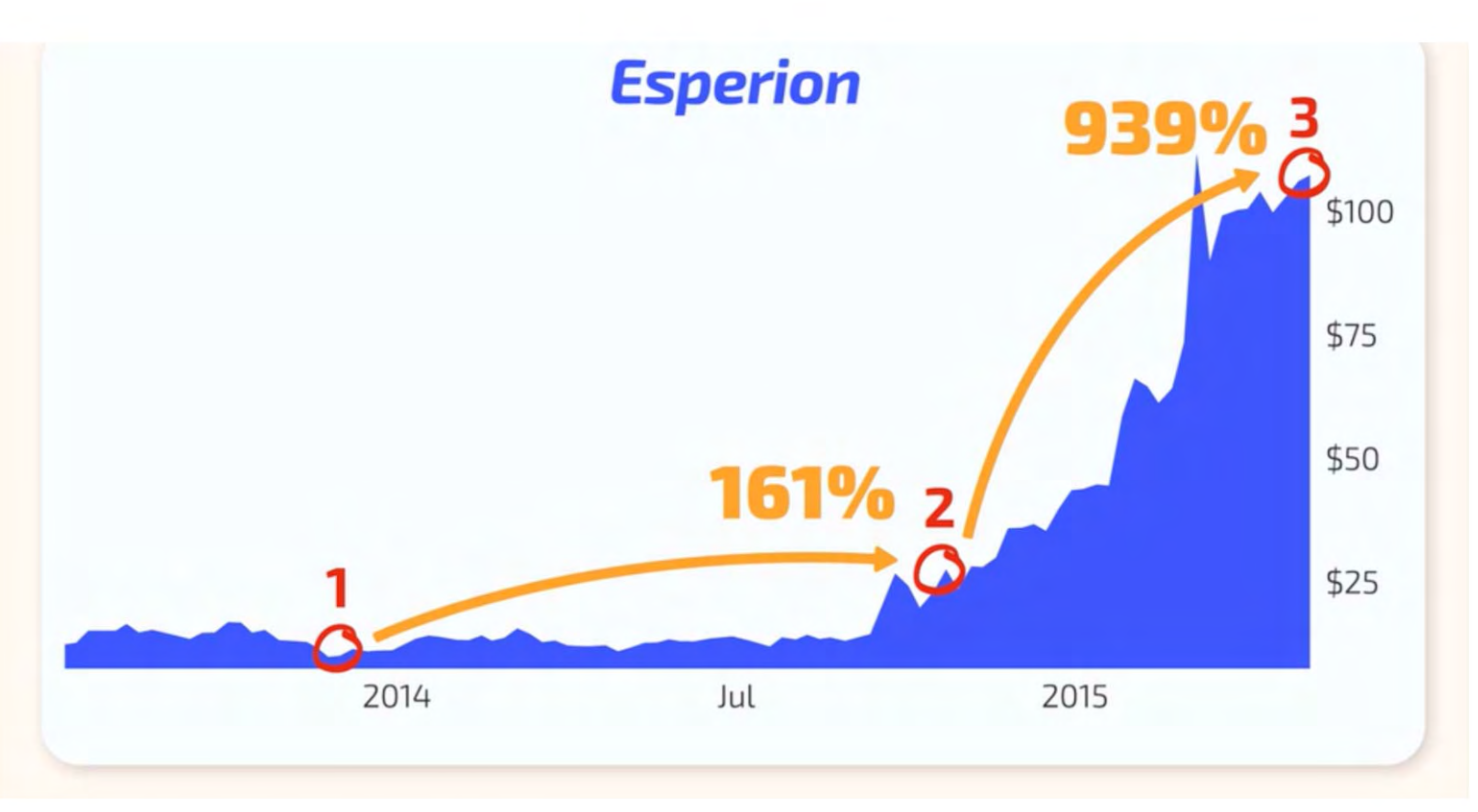
Five Prime…



NewLink…



Esperion…

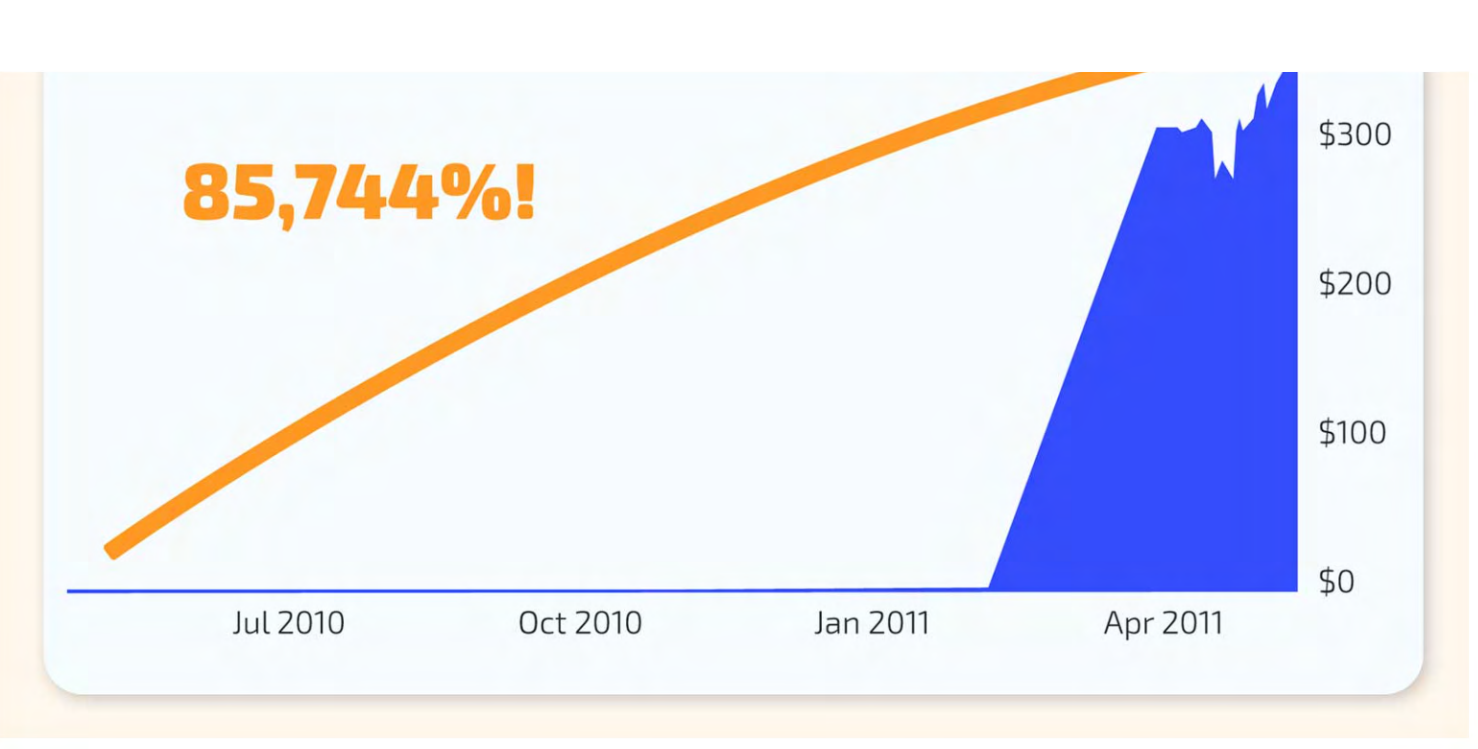


Pullback… first spike… second spike

Again and again and again.

And some of these gains were simply off the charts…

Like OncoSec Medical, that went up a staggering 85,744%… Enough to turn a single $5,000 stake into $4.3 million.



Now that's a real VC-like return. All from public stocks!

Now, obviously, I can't promise a huge gain like that. An 80,000%-plus gain is definitely not the norm and should not be expected.

However…

It's no wonder why some of the richest men of the world—like Bill Gates and Jeff Bezos—are now investing hand-over-fist into Penny IPOs.

These guys made their fortunes years ago… *when tech stocks were still cheap.*

Today, this is the best value you can find.

In three decades working at the highest levels of tech… as an executive at Qualcomm, Juniper Networks, and NXP Semiconductors… and as an early investor in dozens and dozens of private deals… I've never seen anything like this in my life.

I had to get to the bottom of it…

So, I dug in …

And here's what I eventually uncovered:

The reason all these stocks moved in lockstep **has to do with the federal government**.

Yes, the federal government!

You see—BY LAW—these Penny IPO stocks are mandated to disclose key information that pretty much assures they move like they do…

Small rise… pullback… first spike. An even bigger second one.

(I'll explain exactly why this happens in a minute.)

And, as a topper—and this stunned me…

Because these stocks move to their own rhythm…

Some Penny IPOs I found in my research also proved to be immune to shocks like the downturn of '08!

- Valeant, for example, actually went up 84% back in 2008…
- Sequenom rose 108%...
- And Emergent BioSolutions shot up 382%.

Right smack dab in the middle of the last crisis!

Even during the coronavirus scare…

For the last week of February—one of the worst weeks for the market ever…

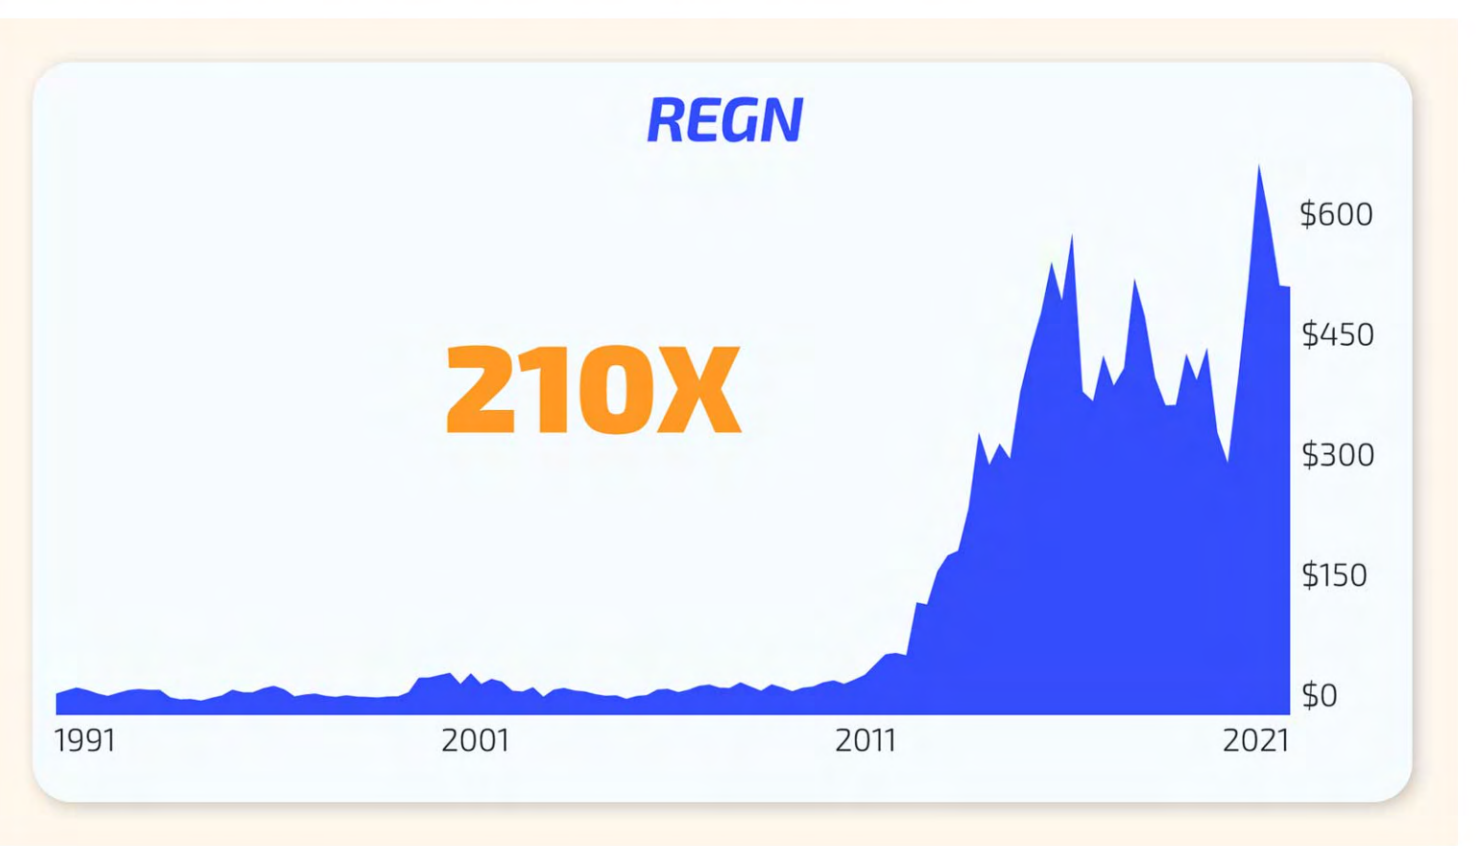
Only 7 stocks out of the 500 S&P 500 showed positive gains…

And the two biggest gainers?

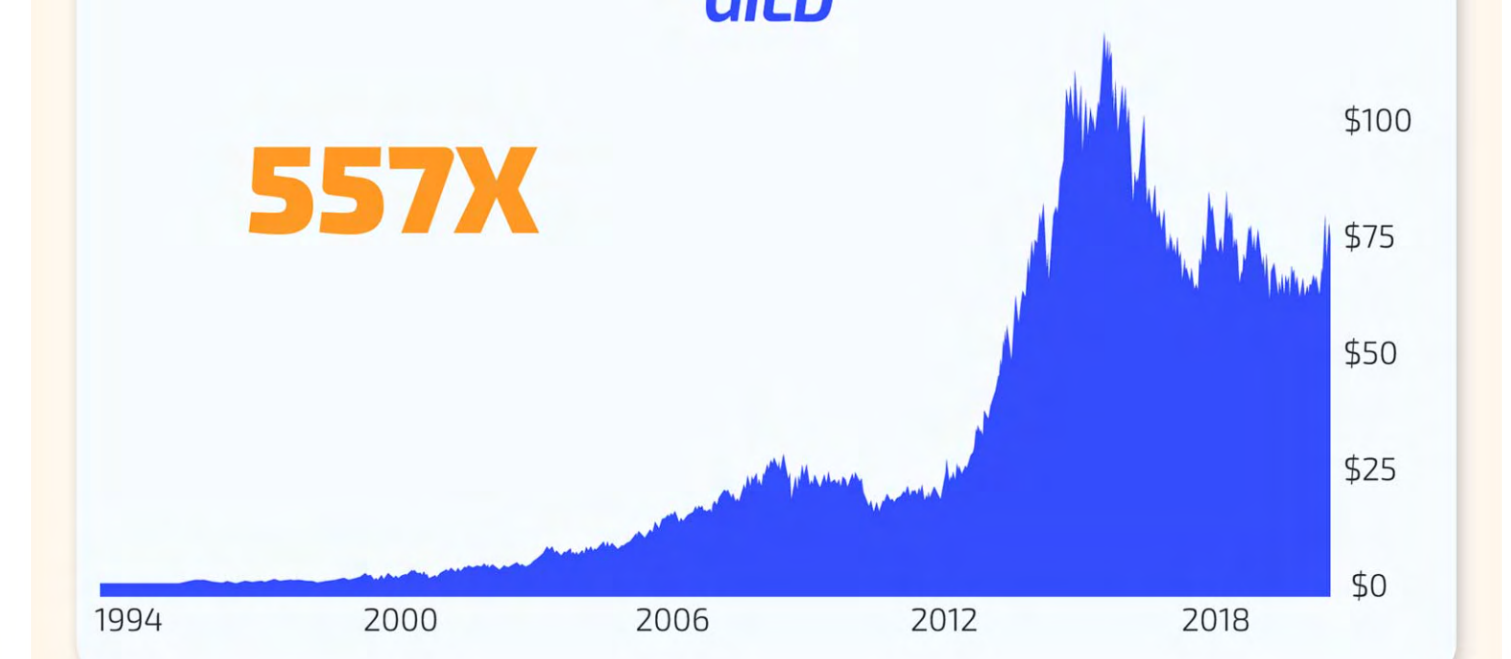
You guessed it…

"Penny IPOs!"-like stock

One of these has gone up as much as 210X in recent years…



And the other has risen **as much as 557 times over**.



Incredible…

I was puzzled…

Why wasn't everyone investing in these low-risk Penny IPO stocks?

If the General Public Only Knew…

But the reality is, it wasn't puzzling at all…

You see, in today's tech world we have a big discrepancy…

On the one hand, you have stocks like Uber, Lyft, Snowflake, and Airbnb.

Wall Street and the financial media pump up these overhyped stocks—*after* the lion's shares of the profits are already done…

On the other hand, you've got Penny IPOs, the closest thing to finding an Amazon two decades back.

These stocks shoot up sky high… follow a predictable pattern… *And, yet, as we saw with the Wall Street Journal proof, they are practically unknown!*

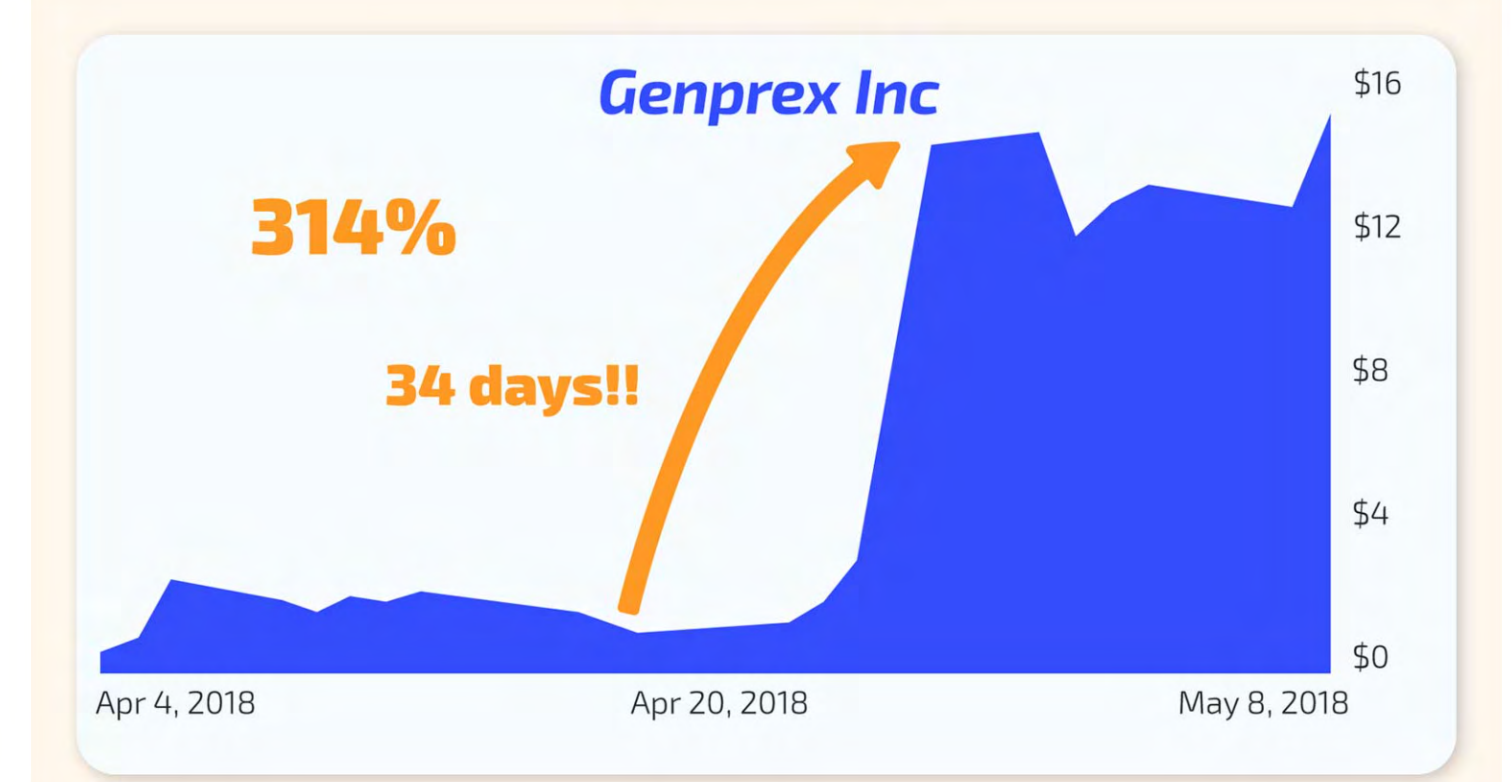
Ridiculous!

But, thankfully, it's *a very lucky* situation for you…

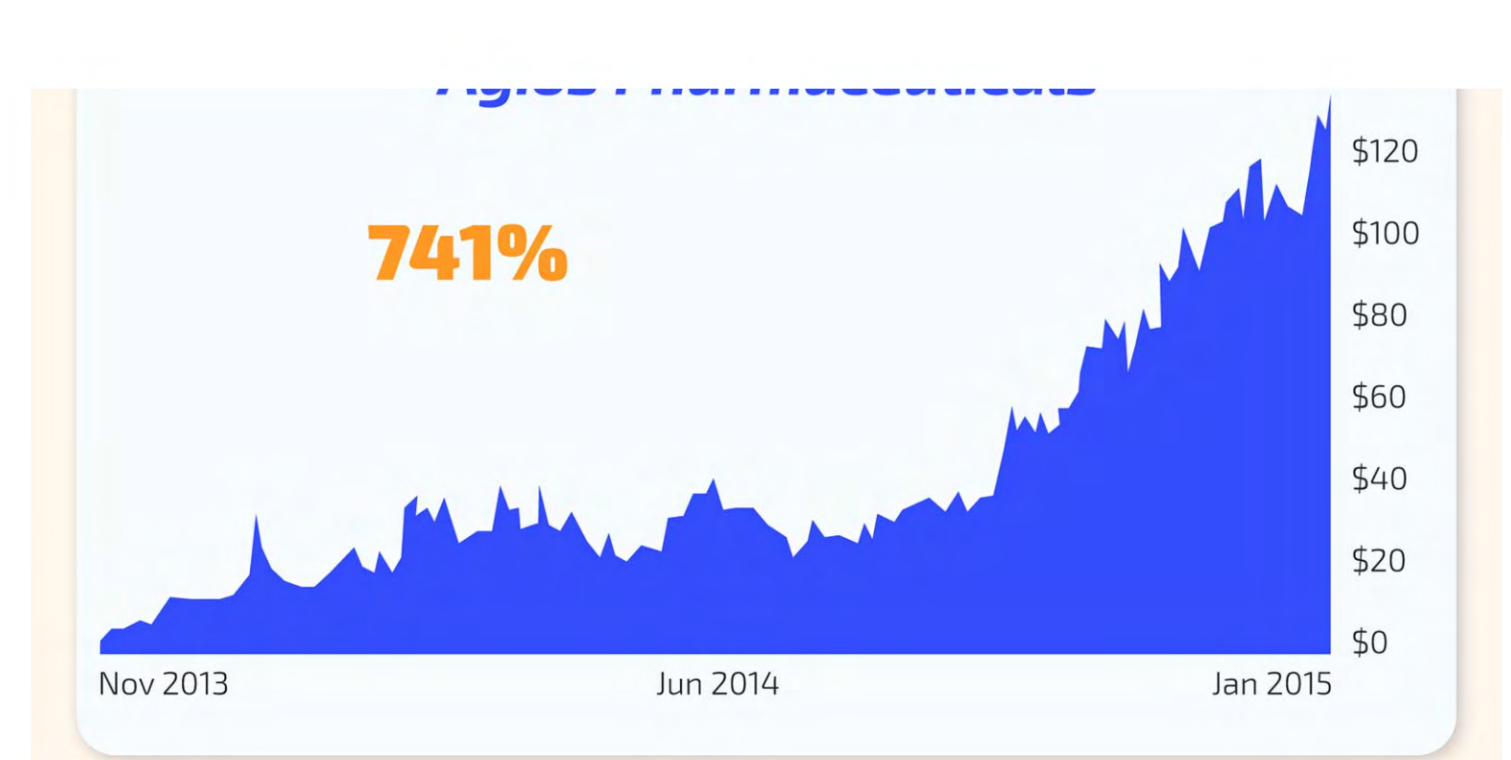
Because as long as these Penny IPOs fly under the radar, *they'll stay cheap.*

That means you'll be able to capture all the upside!

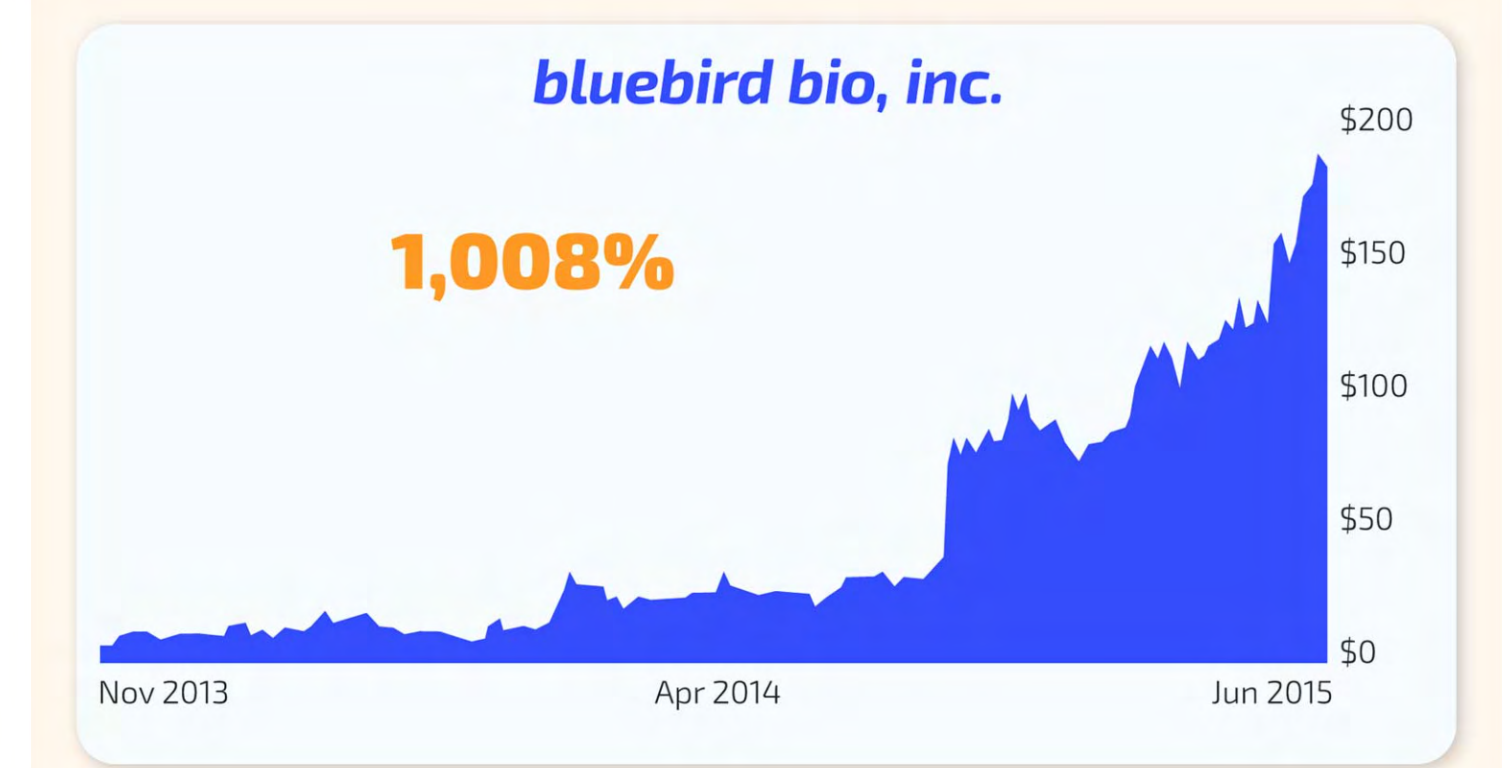
Like with GenPrex, that jumped up 314% in 34 days…



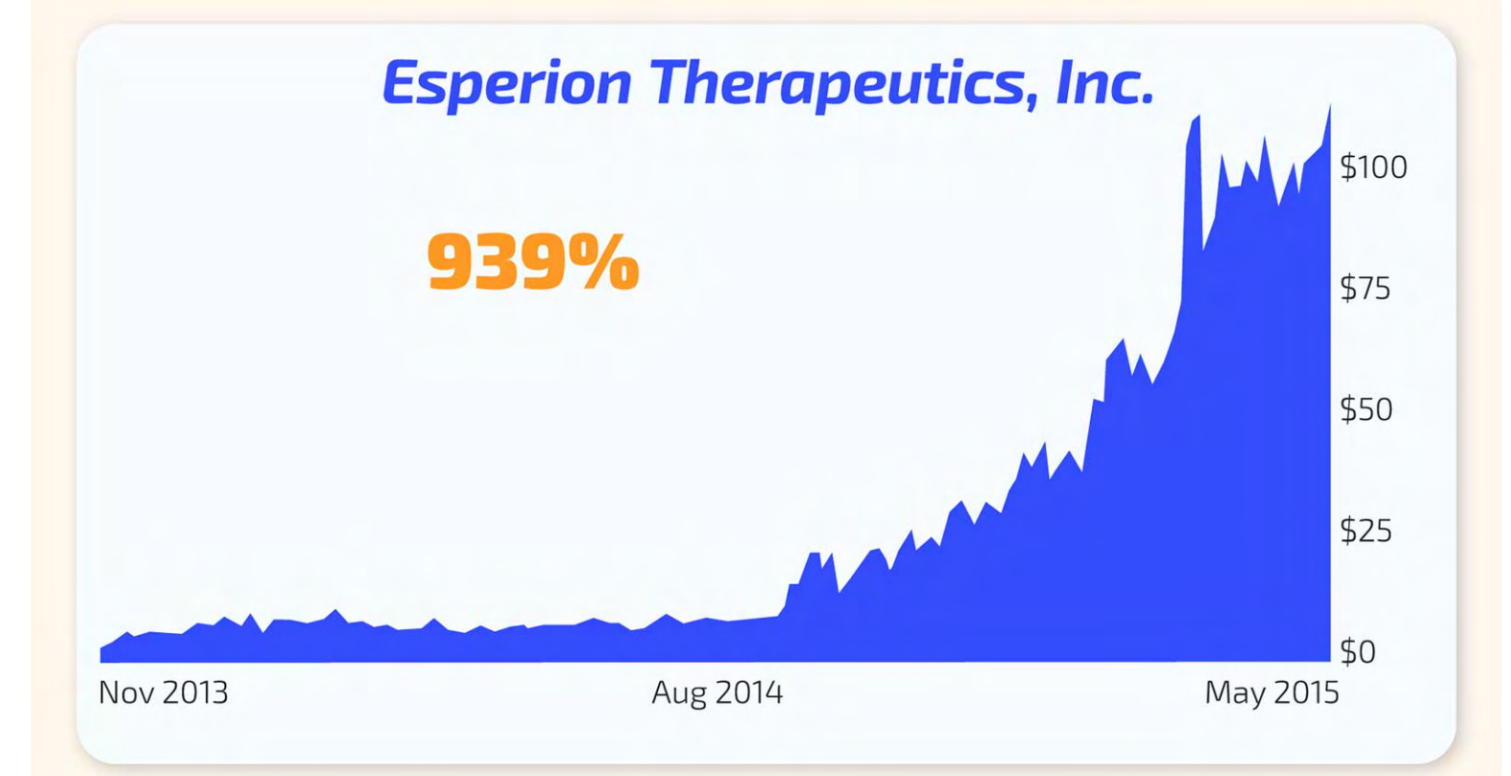
Agios Pharmaceuticals, where you could have made eight times your money…



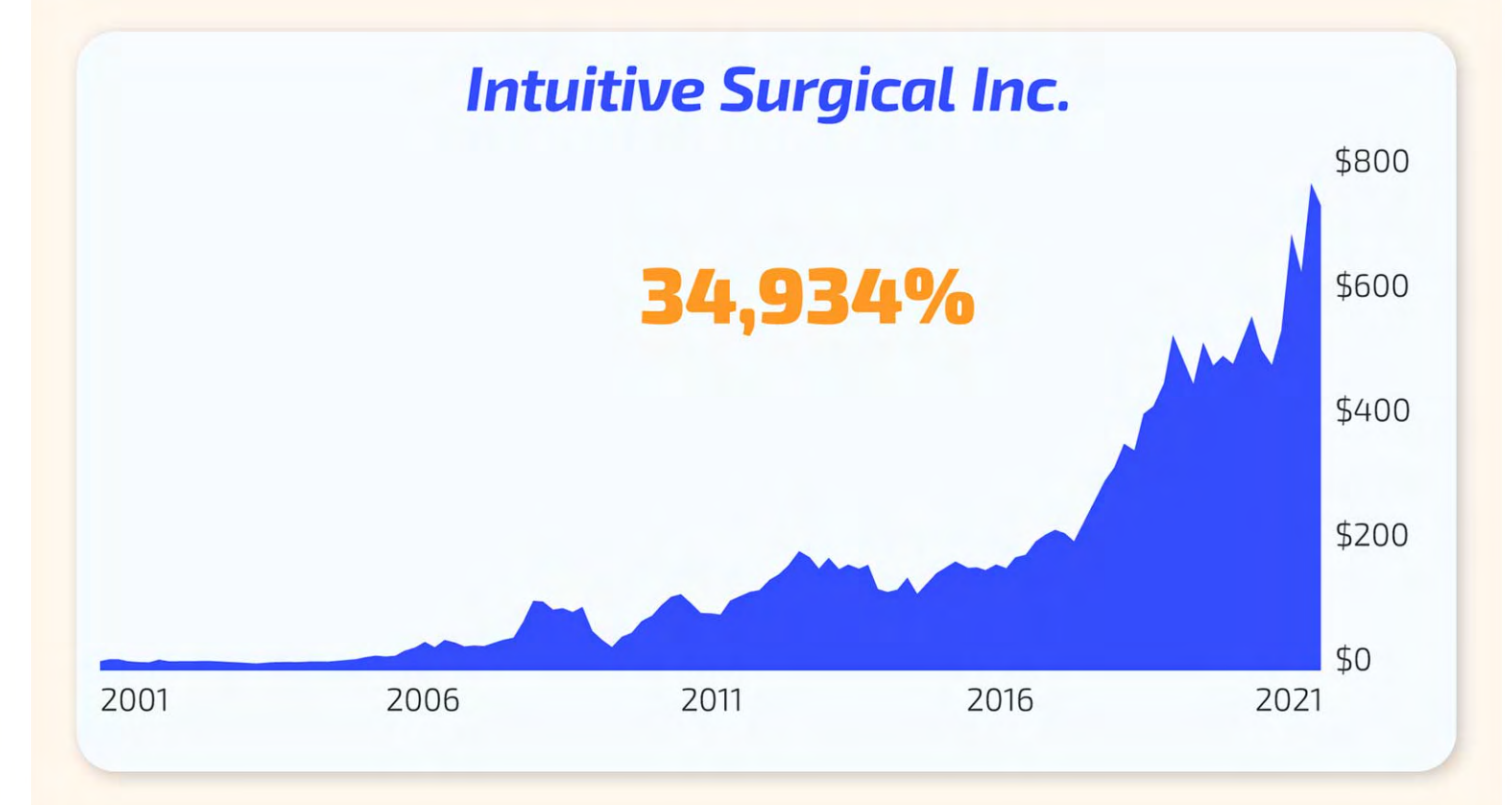
Bluebird Bio, which went up 10X…



Esperion Therapeutics…



And even Intuitive Surgical, where your money could have multiplied more than 350 times over…



Now, did you spot the secret in all these stocks?

These Penny IPO stocks, you see, are all *biotech* companies!

Early-stage biotechs, to be precise.

You see, here's what most people don't realize:

With the incredible advances we're now seeing… the small biotech firms of today are much more "tech" than "bio."

They're actually tech companies in disguise!

This is a big reason why you can still get into these companies at insanely cheap valuations.

It's also why they move in clocklike, predictable patterns…

You see, biotech companies must adhere to strict FDA guidelines. That means, they need to fill out specific FDA forms anytime they want to test a new drug or start a new trial.

If they don't, they're out of business. Plain and simple.

So, it's a perfect setup for investors—almost like getting to see the numbers for the next Powerball draw…

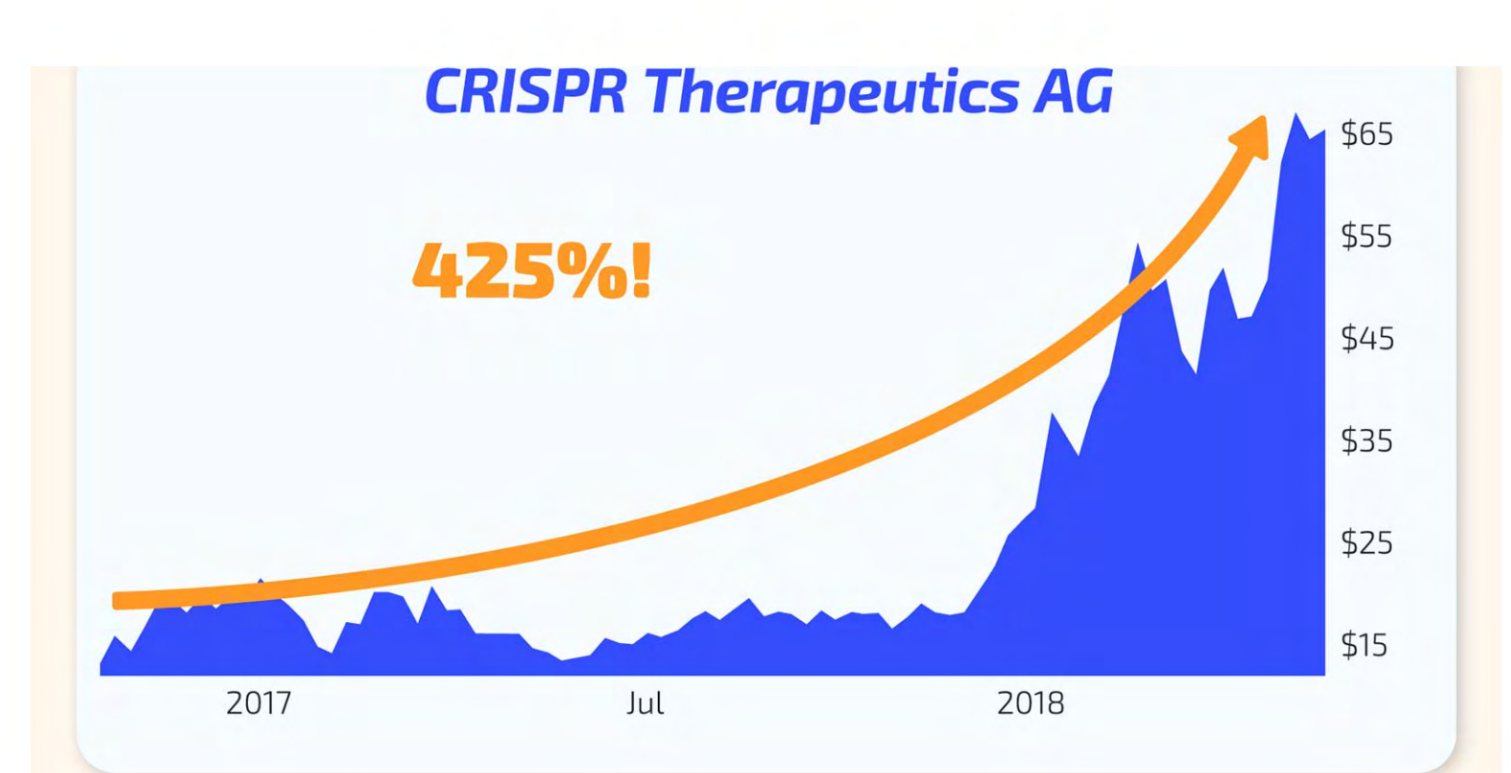
12 hours in advance!

Because—BY LAW—these companies *have* to publicly reveal the results of their trials.

It's an incredible signal. And, yet, most people miss it.

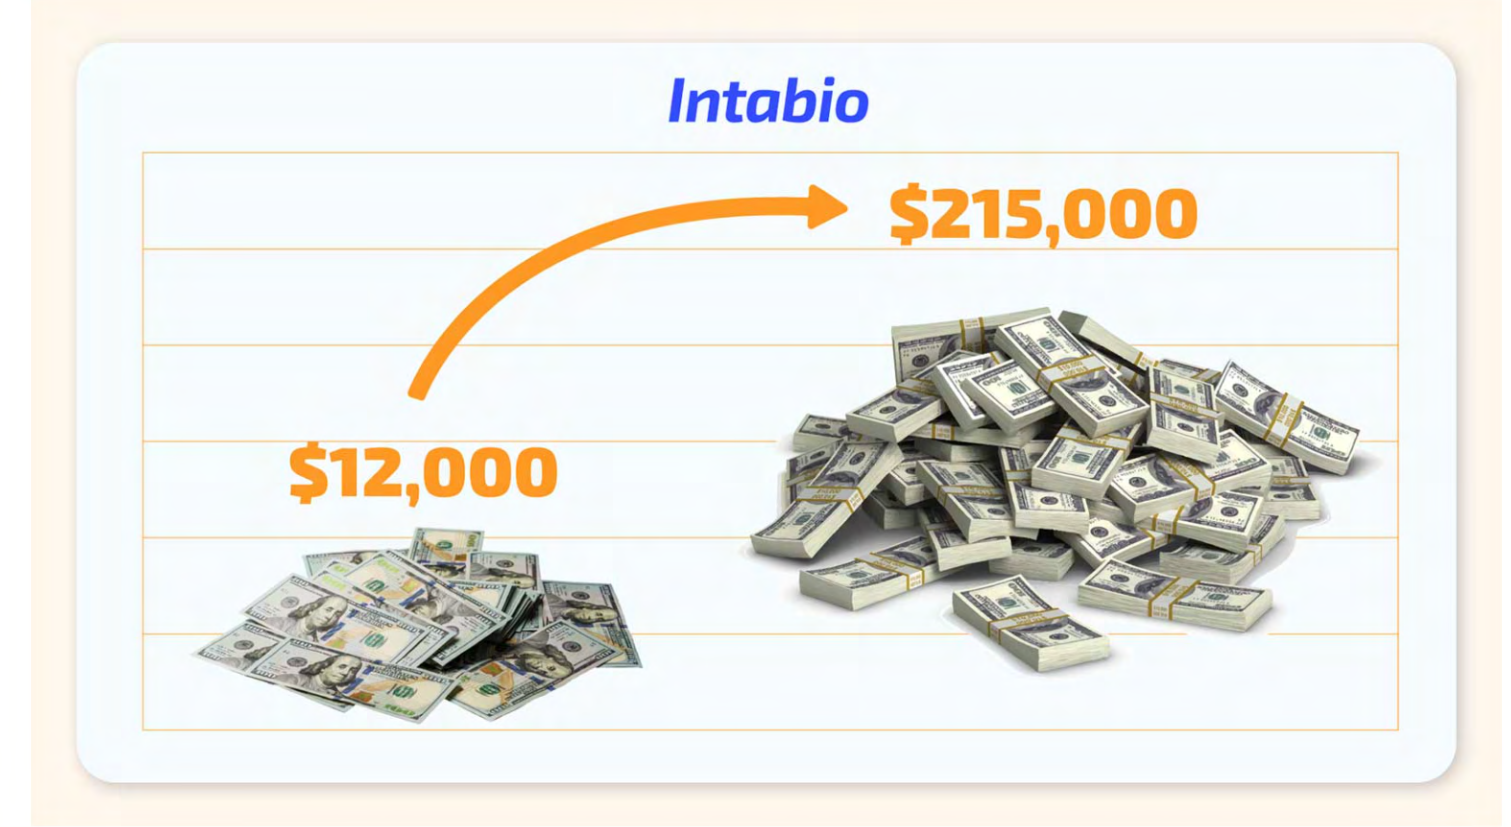
In fact, back in 2016, I was actually the first analyst to recommend CRISPR Therapeutics, the gene-editing pioneer…

After my recommendation, the stock popped as much as 425%.



"Thank you for this urgent IPO alert," said Peggy, one of my readers.

In my personal portfolio, I've also seen massive gains on biotech plays like Intabio, where I turned $12.5k into $215,000.



So, I had long suspected something peculiar was at work with these companies.

However, it wasn't until my research team and I pieced everything together that I saw how predictable and reliable these gains were… And realized the full magnitude of the discovery we'd made…

Why So Cheap?

Now, you might be wondering…

If these are great tech companies in disguise, why are these Penny IPOs so cheap?

Great question!

The reason these biotechs are cheaper, you see, is that they need to go public much sooner…

Breakthrough medical research is not cheap!

Research… new drugs… trials… patents…

It all adds up.

So, by necessity, these companies go public sooner to raise funds.

They invested millions creating the "da Vinci," and needed money to roll it out.

For example, Intuitive Surgical decided to go public shortly before its "da Vinci" surgical robot was approved by the FDA in 2000.

Intuitive's market cap was $700 million—about 100 times smaller than Uber's…

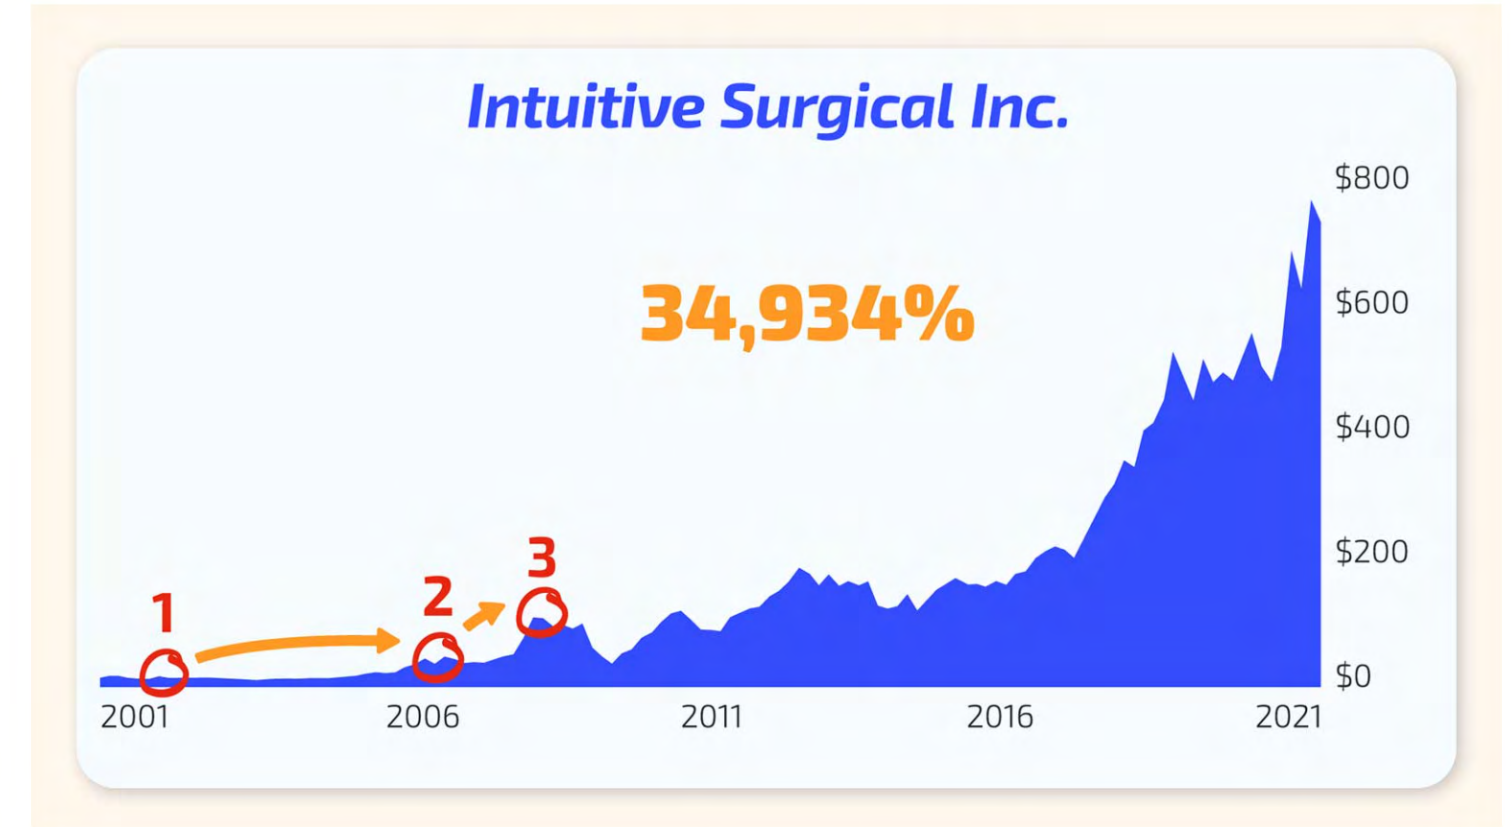
And smart investors who bought in after the IPO were richly rewarded…

That's because Intuitive followed the same predictable "1-2-3" pattern as the other Penny IPOs…

First, we saw a small rise and then a pullback…

Followed by a first spike…

And an even bigger second spike.

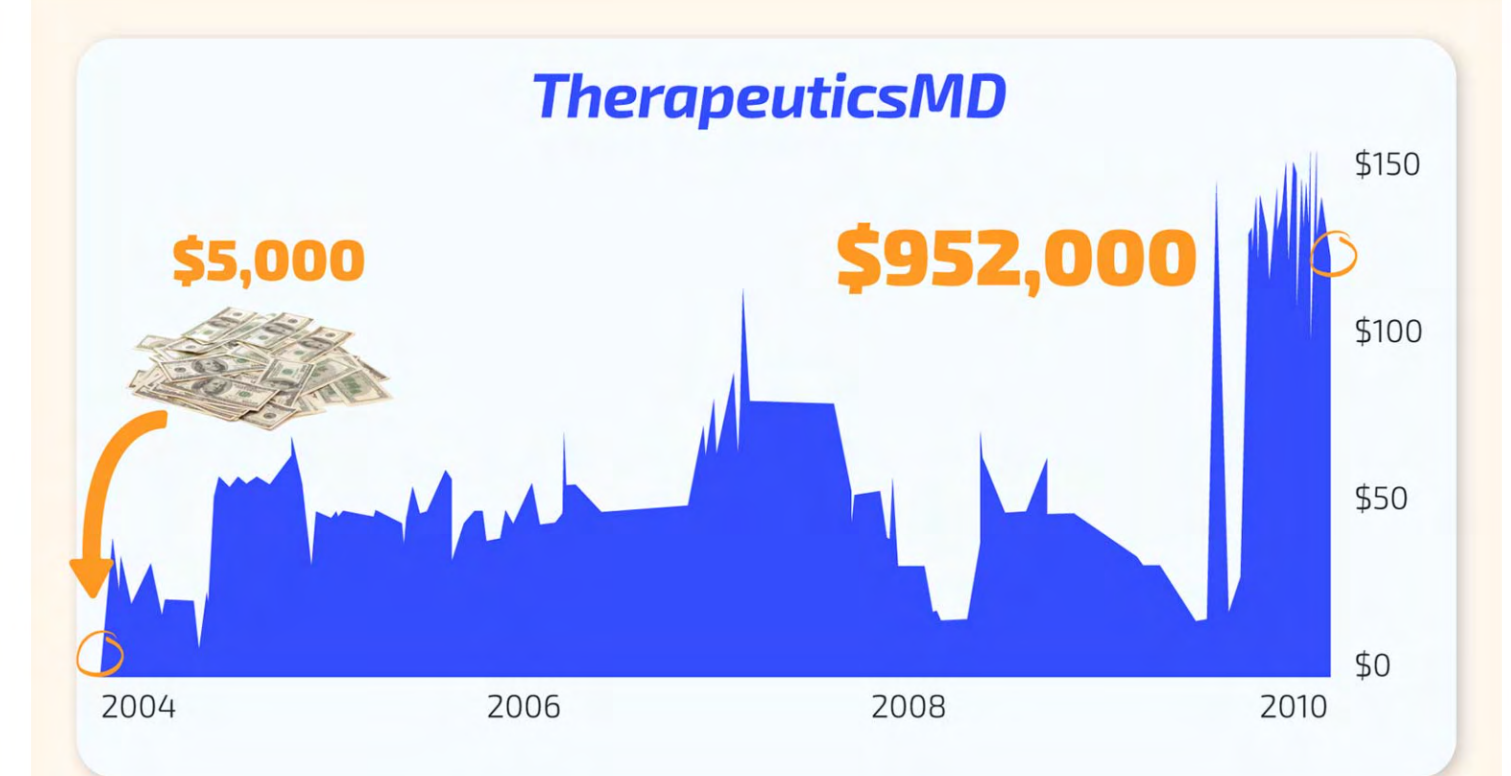


In fact, investors today are up as much as a whopping 34,934%!

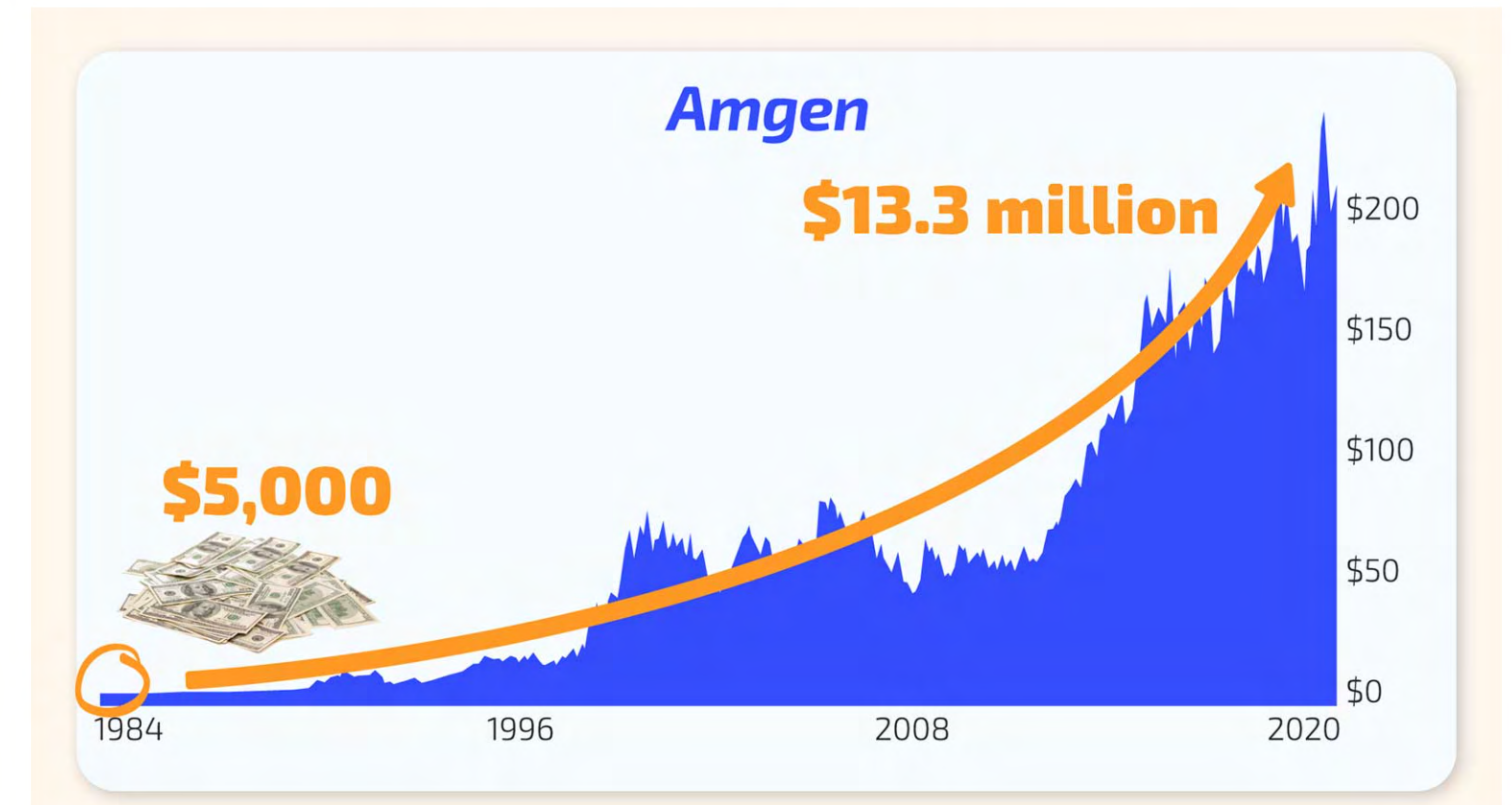
That turns every $5k invested into $1.7 million!

What would you do with that kind of money? Travel? Or simply kick back, relax, and enjoy yourself?

TherapeuticsMD saw a similar trajectory. Here, a $5k stake catapulted into as much as $952,000…



And with Amgen, $5,000 grew into a rare and astonishing $13.3 million.



That's life-changing, VC type of money.

What would you do with those types of profits?

Why 98% of Penny IPOs Have Followed the Same "Clockwork-Like" Pattern…

Now, another question you might be asking is:

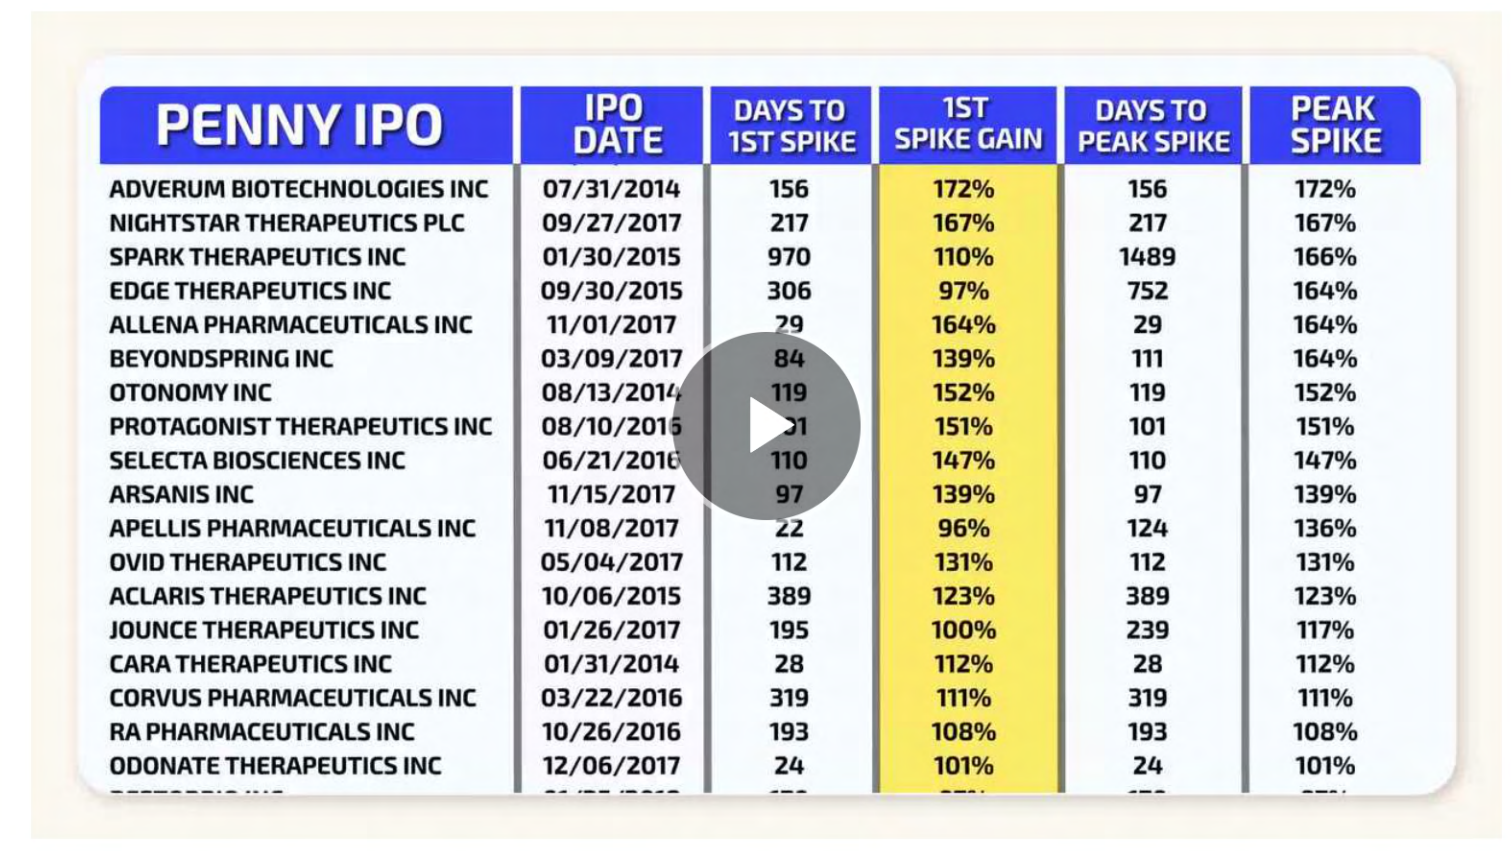
Am I cherry picking here? I mean, just how predictable are these early-stage biotech IPOs, anyway?

Here's what I can tell you.

And it's based on fact.

Not opinion.

A full 98% of the companies we studied in our back-test exhibited the same predictable pattern.



PENNY IPO	IPO DATE	DAYS TO 1ST SPIKE	1ST SPIKE GAIN	DAYS TO PEAK SPIKE	PEAK SPIKE
ADVERUM BIOTECHNOLOGIES INC	07/31/2014	156	172%	156	172%
NIGHTSTAR THERAPEUTICS PLC	09/27/2017	217	167%	217	167%
SPARK THERAPEUTICS INC	01/30/2015	970	110%	1489	166%
EDGE THERAPEUTICS INC	09/30/2015	306	97%	752	164%

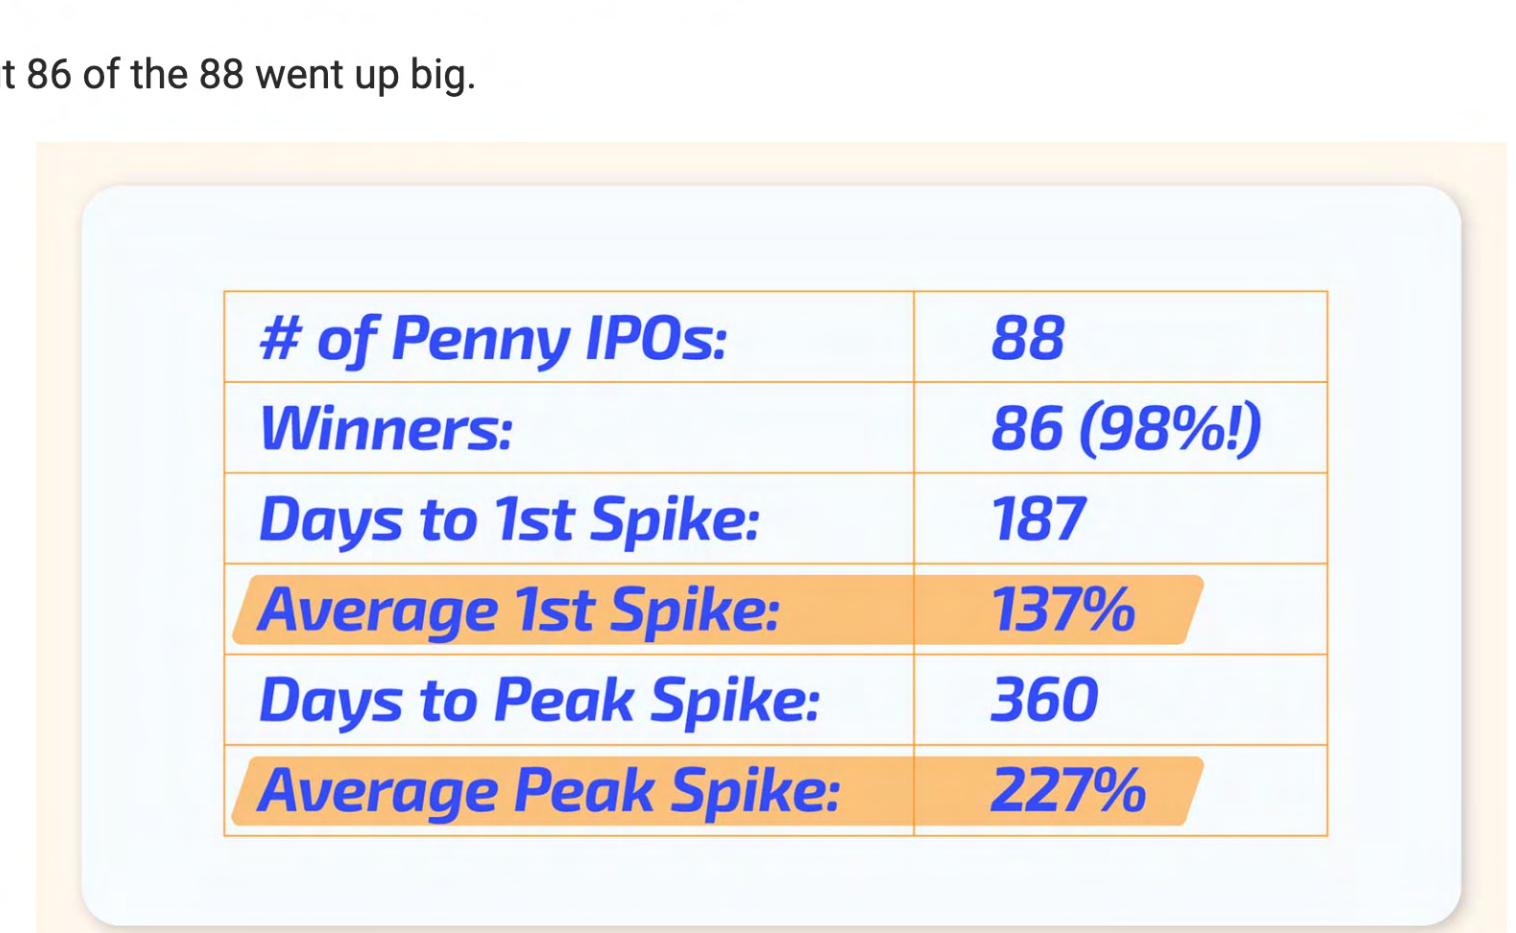
RA PHARMACEUTICALS INC	10/26/2016	193	108%	193	108%
ODONATE THERAPEUTICS INC	12/06/2017	24	101%	24	101%

So, *no,* it wasn't perfect.

We did have 2 "losers."

(One was flat, and the other went down 2%.)

But 86 of the 88 went up big.

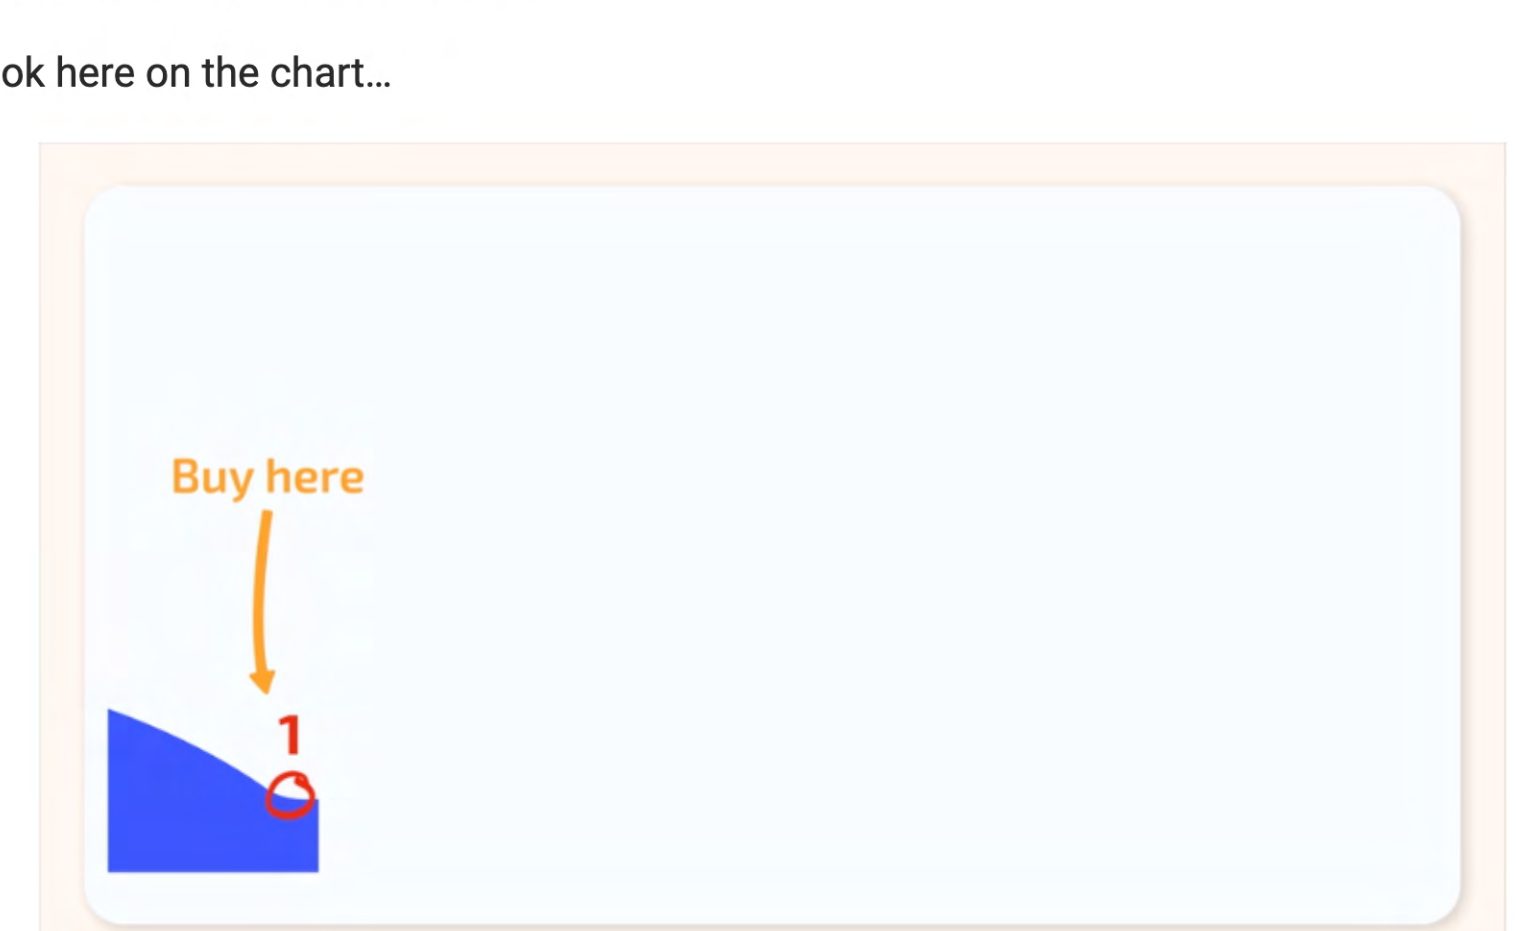


# of Penny IPOs:	88
Winners:	86 (98%!)
Days to 1st Spike:	187
Average 1st Spike:	137%
Days to Peak Spike:	360
Average Peak Spike:	227%

In fact, each of our Penny IPOs had its first spike (on average) 6 months after the first pullback…

Shooting up 137% on average.

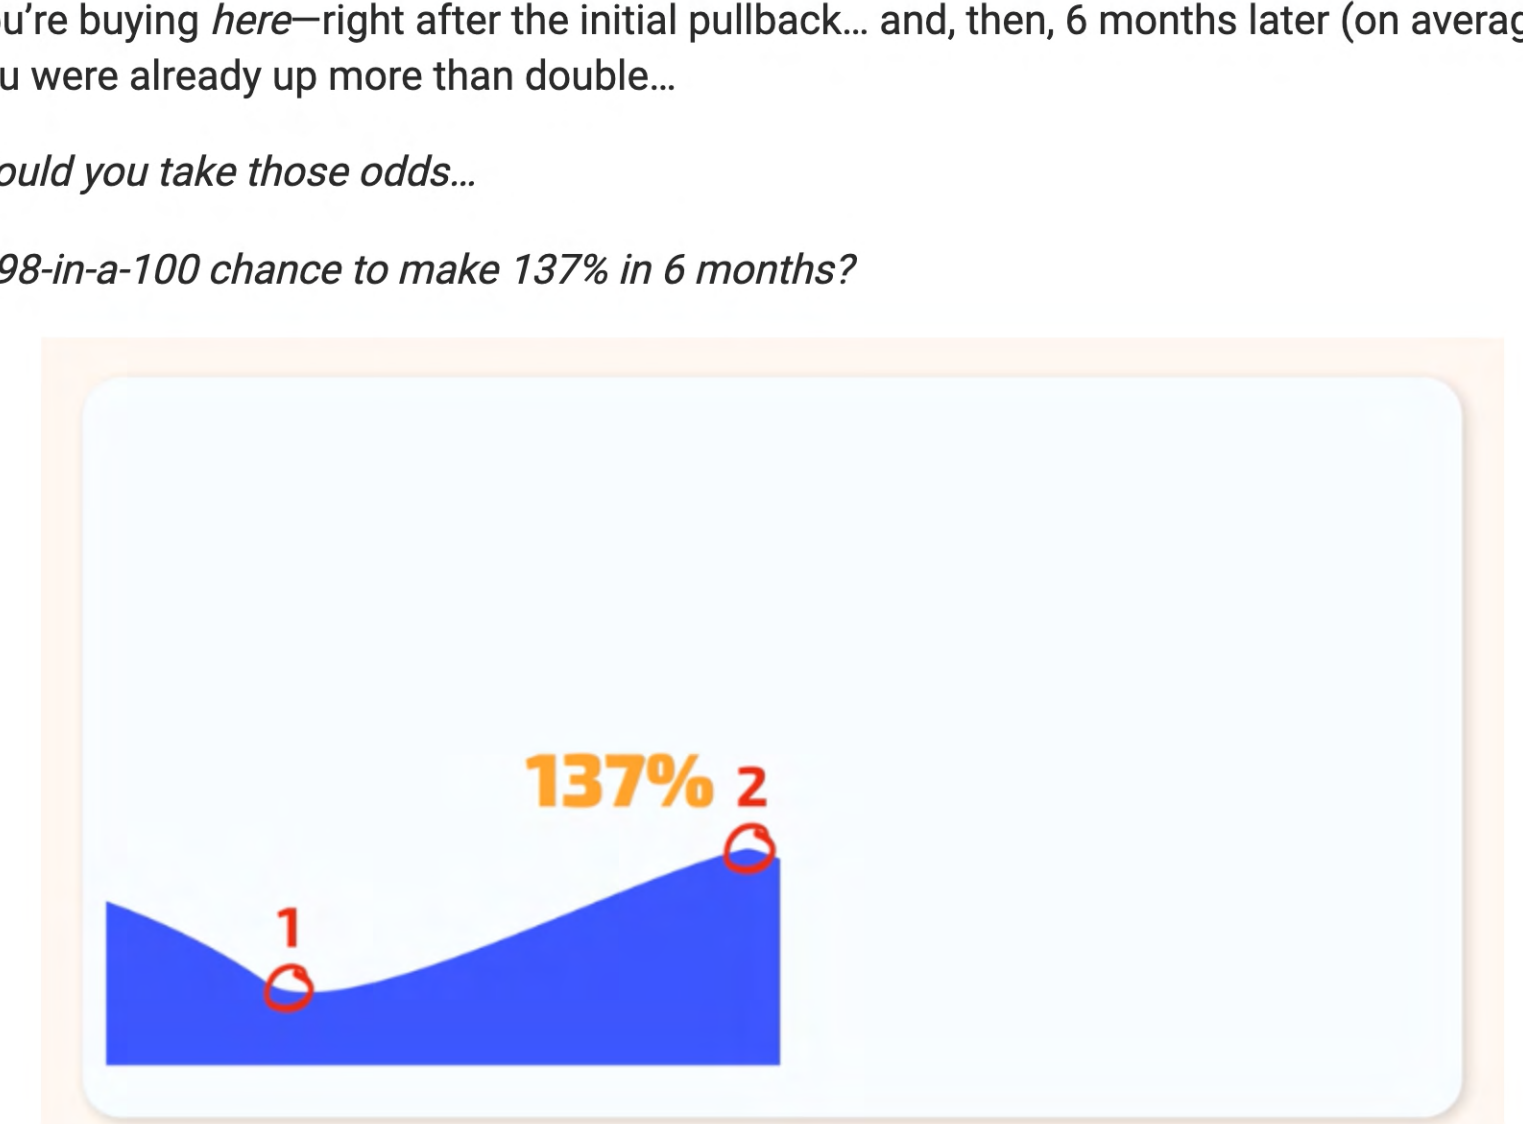
Look here on the chart…



You're buying *here*—right after the initial pullback… and, then, 6 months later (on average) you were already up more than double…

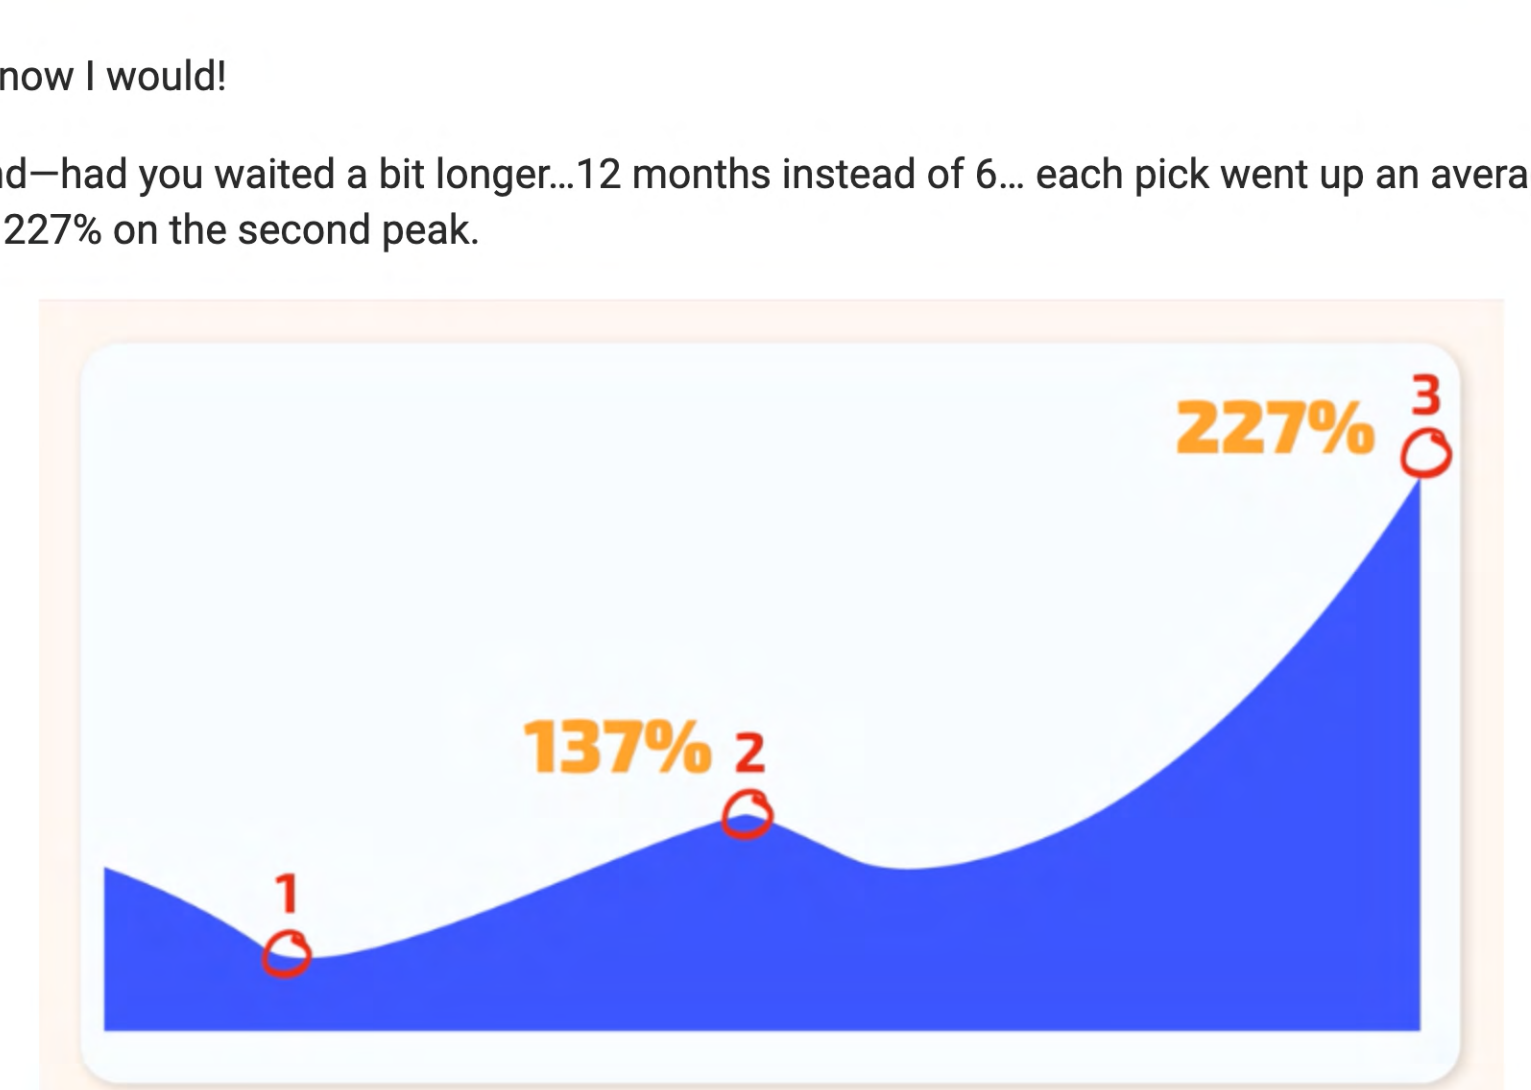
Would you take those odds…

A 98-in-a-100 chance to make 137% in 6 months?



I know I would!

And—had you waited a bit longer…12 months instead of 6… each pick went up an average of 227% on the second peak.

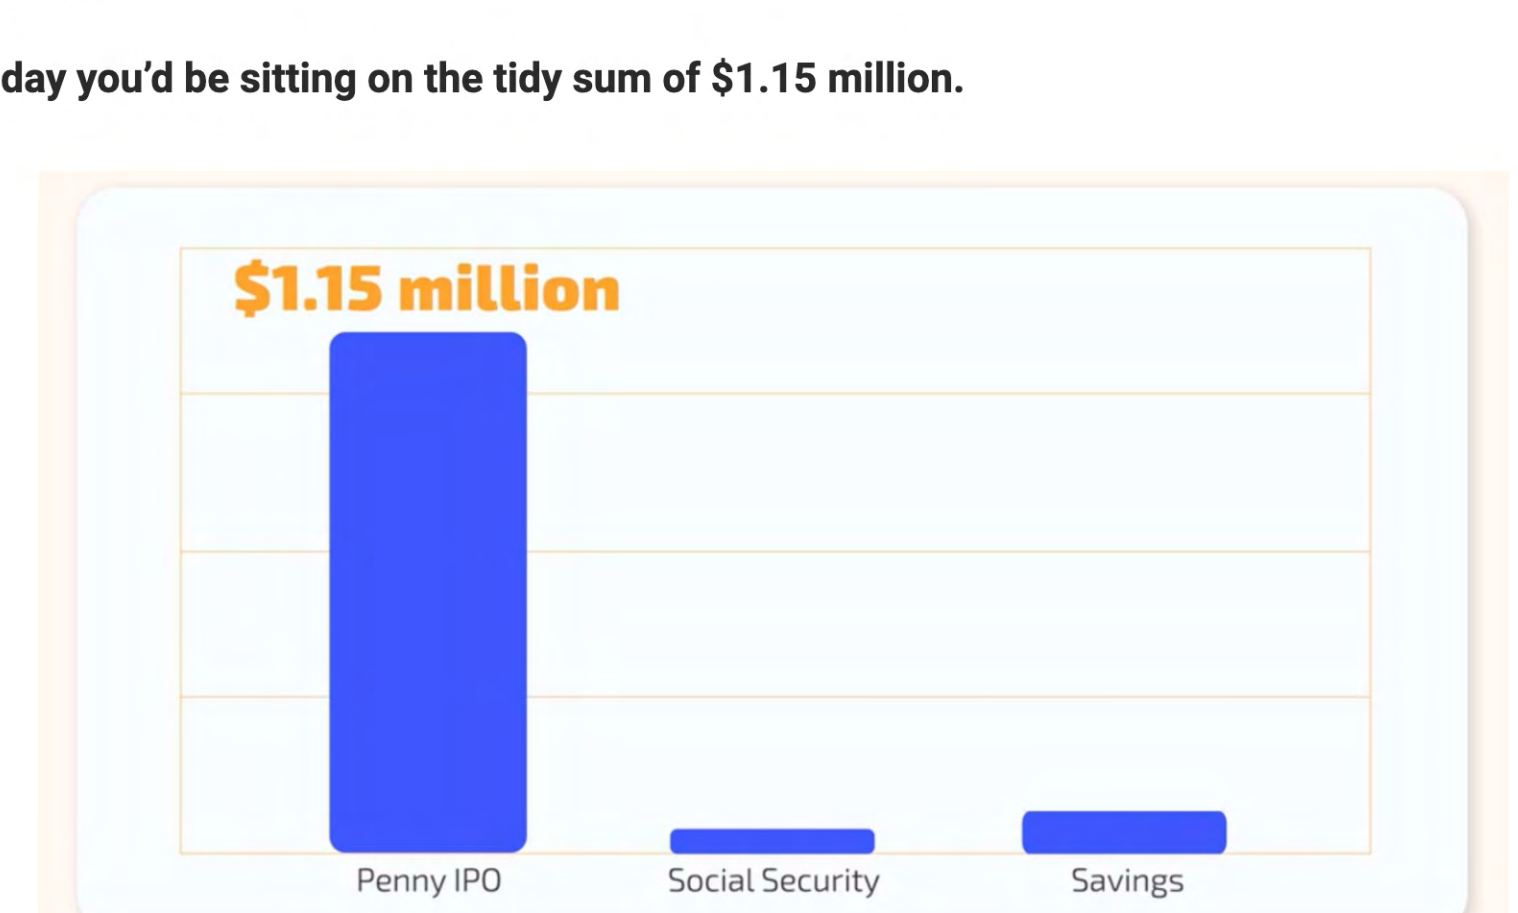


Now, obviously, you can't (and won't!) always time the exact top.

But you don't need to!

Heck, even if you just captured 80% of that total gain and put $5k into each of those stocks…

Today you'd be sitting on the tidy sum of $1.15 million.



That's 765 times more than what Social Security pays each month…

And 18 times what most 65-year-olds have saved up, according to Fidelity.

Right now, there are 3 Penny IPOs I'm especially primed for…

I believe each of these will easily reach 227%…

And, as you'll see in a minute, they could all do significantly better.

The 3 Best Penny IPOs of Today

But first, there's something I want to share with you…

And that is:

My youngest son was born with a serious medical condition.

Now, don't worry, he's doing fine.

But that experience gave me a profound appreciation of modern medical technologies…

What we're seeing today is truly inspiring…

We are witnessing the eradication of many diseases once thought incurable!

Consider:

Have you heard of beta thalassemia, a rare blood disorder that requires blood transfusions every 2 to 4 weeks?

Well, one patient was treated using cutting-edge therapy. At last count, he's been transfusion-free for 9 months…

Another patient, Victoria Gray, had sickle cell disease… which cuts off oxygen from reaching vital organs.

Victoria *has now gone nearly a year without any major symptoms!*

"Amazing," she says. "It's the change I've been waiting on my whole life."

We're now at the dawn of several truly life-changing discoveries…

And that's *exactly* what my top Penny IPOs are working on.

Today, not only can you get wealthy by supporting these breakthroughs…

But you'll also help thousands of people beat debilitating diseases in the process.

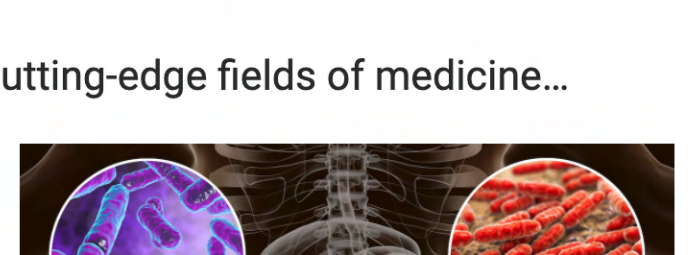
A true win-win!

Penny IPO #1: Get in at half the "Insider's" Price!

First up is Penny IPO #1…

This company is working on one of the latest, most cutting-edge fields of medicine…

The microbiome.



You see, we all have a diverse array of microorganisms that live inside us.

Collectively, these are known as the "human microbiome." And it's essential to our health.

The microbiome, for example, helps us digest our food… maintains our immune system… and regulates our metabolism.

And scientists just discovered the microbiome is linked to many illnesses!

AIDS… MS… cardiovascular disease… Parkinson's… IBS… even autism.

Dr. Jeffrey Gordon, a pioneer in the field, was recently awarded Columbia University's prestigious *Horwitz Prize* for his work on the microbiome…

(This prize is awarded each year for outstanding work in biology or biochemistry. Since 1967, 43 *Horwitz* winners have gone on to win the Nobel Prize!)

Well, get this…

Dr. Gordon is now collaborating with Penny IPO #1!

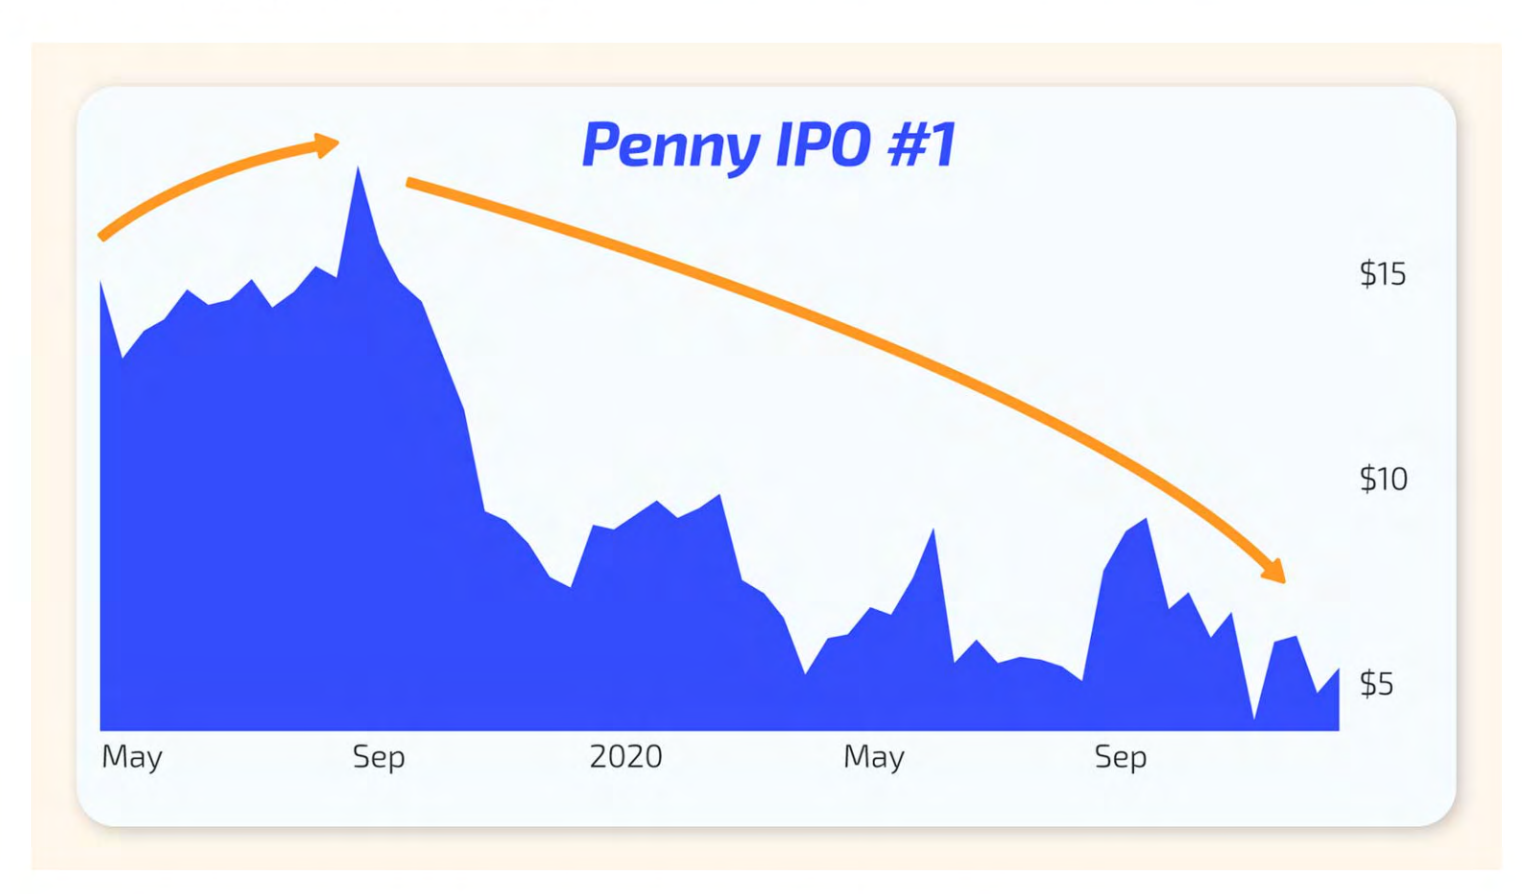
In fact, they've already created a library of more than 1,500 microbiome-based treatments to help fight… *and even prevent* … disease. (One of these, for example, is cirrhosis, which kills over 1 million people a year…)

No other company in the field comes close to Penny IPO #1!

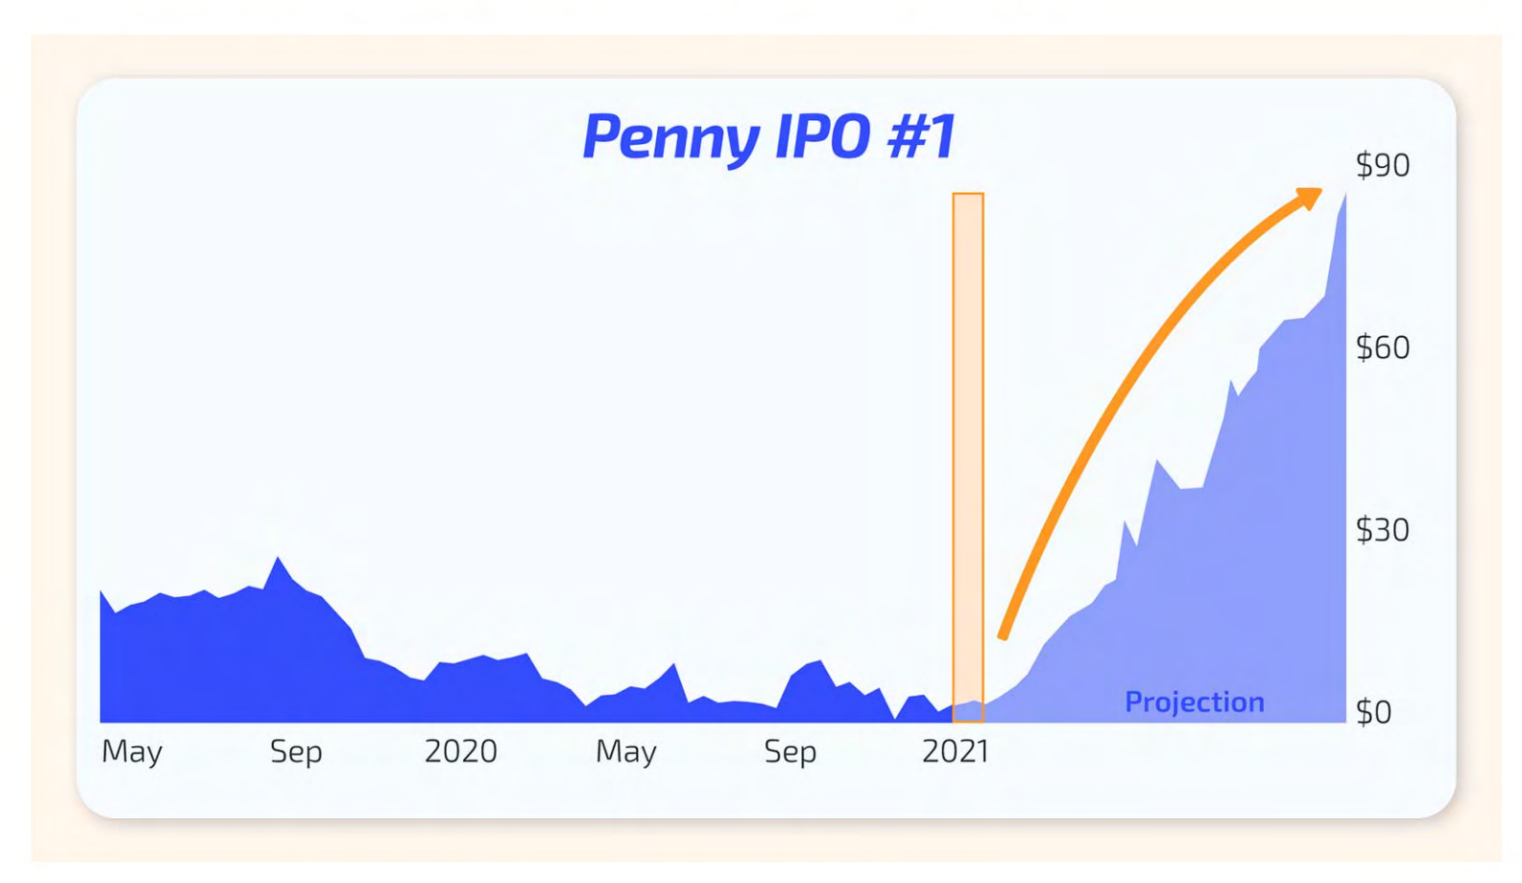
That's why several big VCs—including Fidelity Management & Research—poured over $160 million into the company.

And now is the perfect time to get in…

Because, in classic Penny IPO style… the stock has already seen its first initial small surge—right here—and its pullback, here …



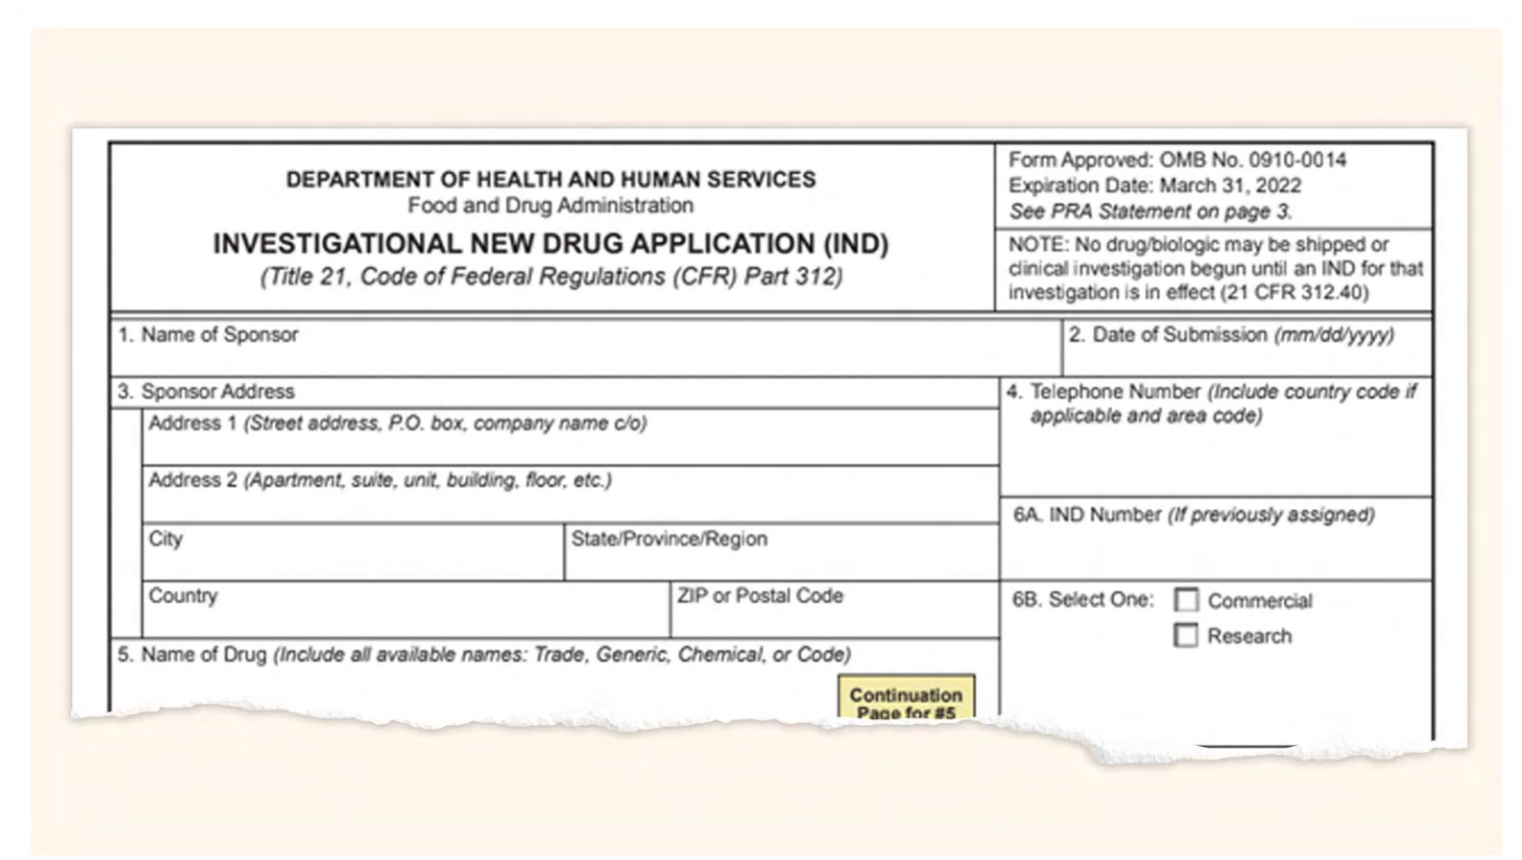
And, now, it's reversing. And is poised for its first big spike up!



In fact, the company is set to release important trial data…

That could literally be any day now…

On top of that—they are set to file a key "Investigative New Drug" or IND form with the FDA.



DEPARTMENT OF HEALTH AND HUMAN SERVICES
Food and Drug Administration
INVESTIGATIONAL NEW DRUG APPLICATION (IND)
(Title 21, Code of Federal Regulations (CFR) Part 312)

Form Approved: OMB No. 0910-0014
Expiration Date: March 31, 2022
See PRA Statement on page 3.

NOTE: No drug/biologic may be shipped or clinical investigation begun until an IND for that investigation is in effect (21 CFR 312.40)

1. Name of Sponsor

5. Name of Drug *(Include all available names: Trade, Generic, Chemical, or Code)*
Continuation Page for #5

Catalysts like this—trial results, or filing an IND with the FDA—are *almost always* what cause the big spikes we see in Penny IPOs...

In fact, they were responsible for 100% of the first spikes we saw in our research.

Do you understand the implications of this?

Let me explain:

We are recommending you buy early-stage biotech companies *that just went public*… with a built-in catalyst coming up…

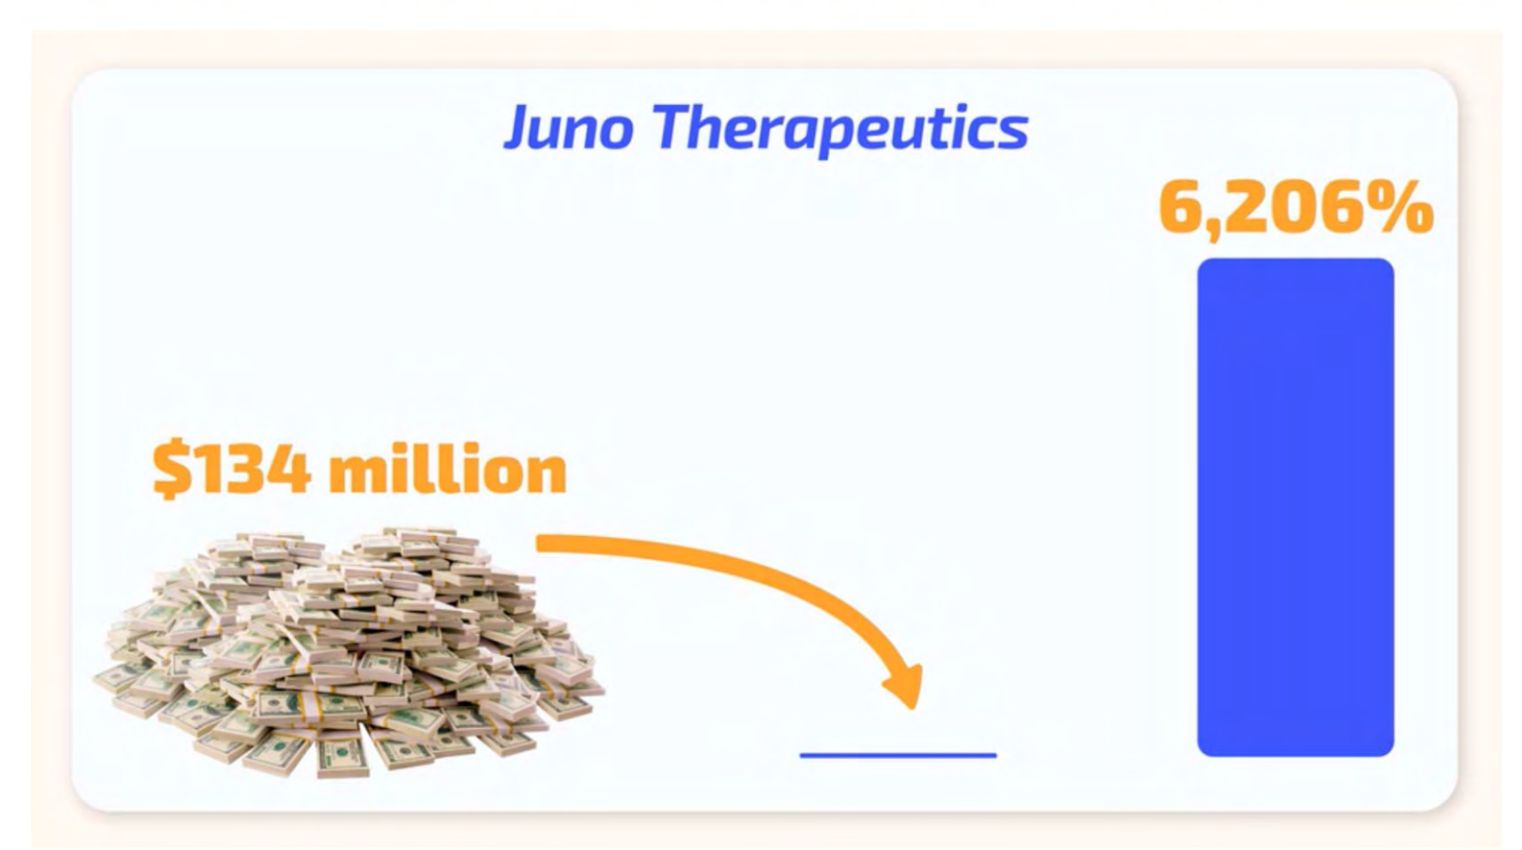
And, remember, **the FDA mandates** these companies MUST make their results public!

Now do you see why my back-test shows a 98% success rate and an average gain of 227%?

It's an almost sure path to profits!

I suspect Amazon's Jeff Bezos knows this…

Back in April 2014, he invested $134 million into Juno Therapeutics. Eight months later, the company went public and Bezos' stake shot up by as much as 6,206%.

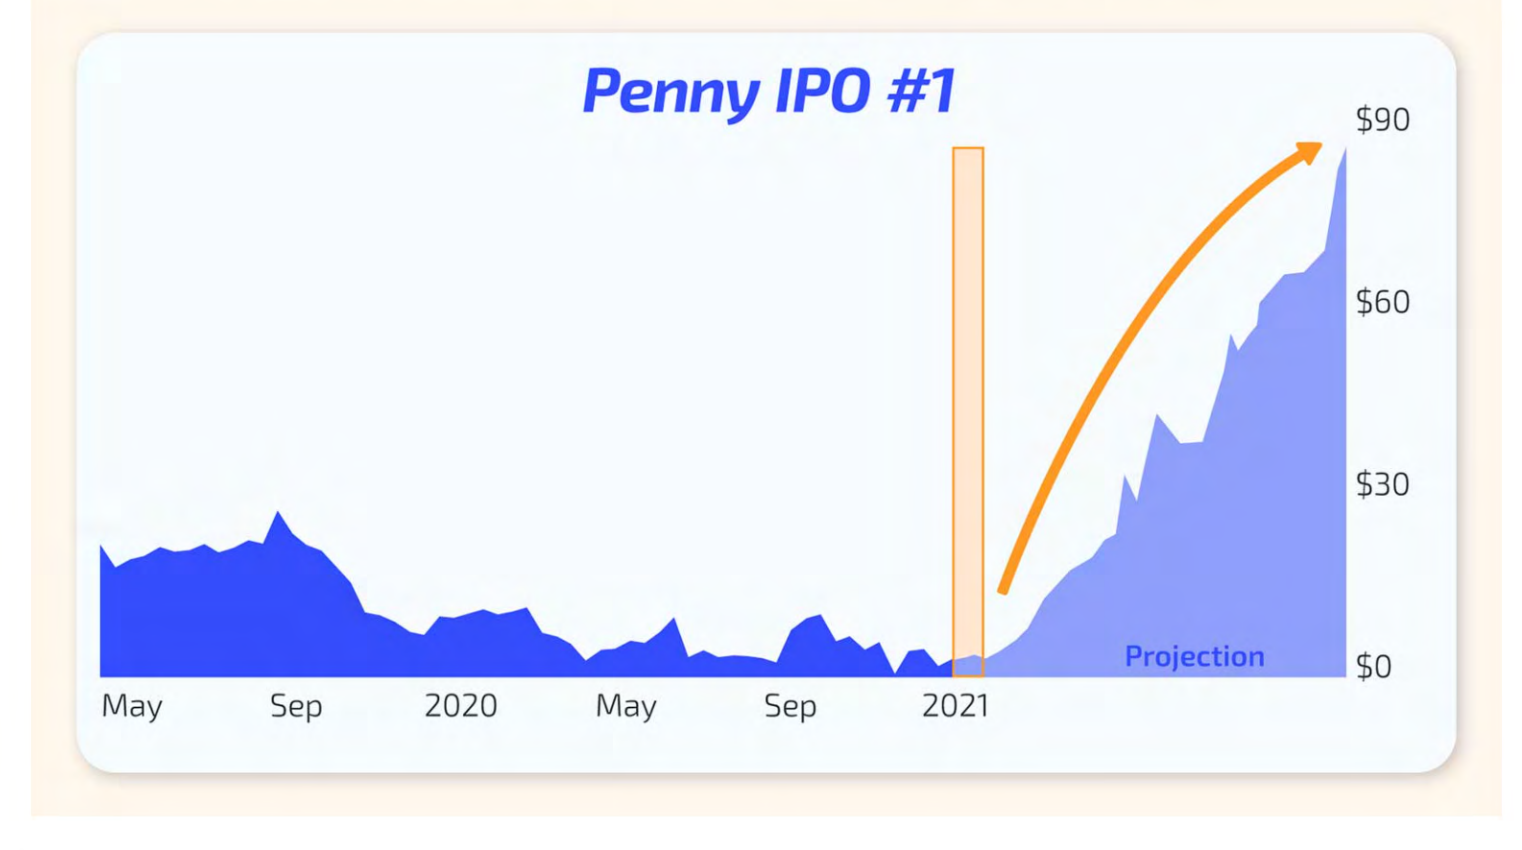


Over 60 times his money!

On top of that, shares of Penny IPO #1 right now are dirt cheap!

In fact—as of today—you can buy the stock for 30% less than what the VCs paid back in 2018… when the company was still private!

And your window of opportunity—as you can see here—is very short…



Look…

If I could log into your brokerage account right now and buy shares for you, I would!

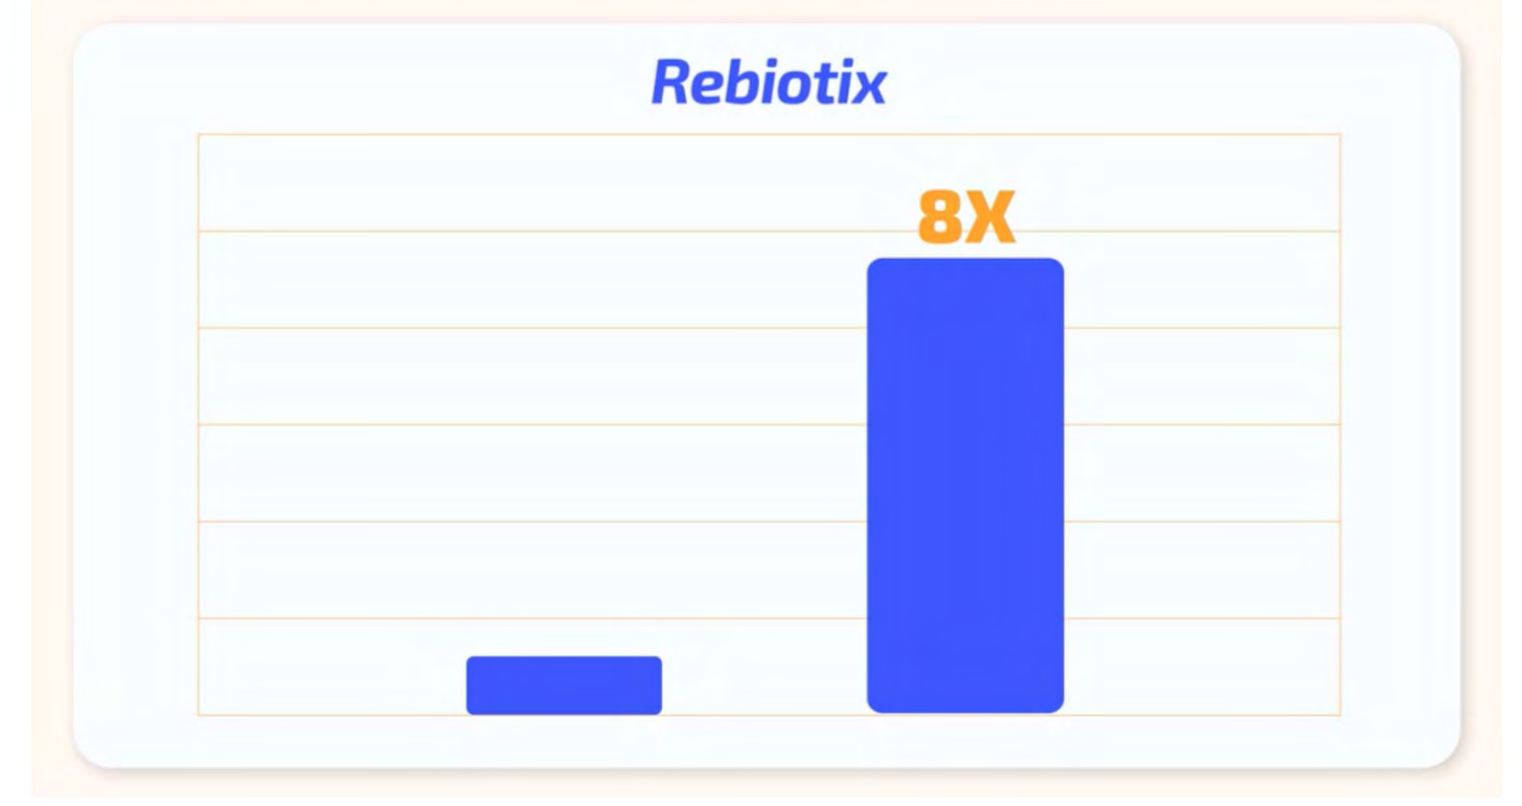
This is a *very high conviction* recommendation.

In fact, the company's wired for success…

- It's got 11 patents…
- They just scooped up the former Chief Marketing Officer of GlaxoSmithKline, the $100 billion biotech giant…
- And recently, they signed a deal to start working with *Johnson & Johnson* to help prevent allergies in children.

That's huge!

Rebiotix, another biotech working on the human microbiome, recently shot up 8X before getting acquired…



And they're not even in the same class as Penny IPO #1!

Sky's the limit.

Though nothing is guaranteed, I believe—over the long term—we could conservatively see at least another 8X here too…

Penny IPO #2: The End of Chemo?

Next, Penny IPO #2…

As you know, traditional cancer treatments *just plain stink*.

Chemo. Radiation. Surgery. These methods burn down everything in our bodies—including healthy cells.

Worse, the odds of success are often abysmally low!

Penny IPO #2 is looking to change that…

It is working on a radical new approach that works *with the body*—at the cellular level.

By "piggybacking" on our body's natural gene editing capabilities, it can edit (and even delete) faulty genes affected by cancer…

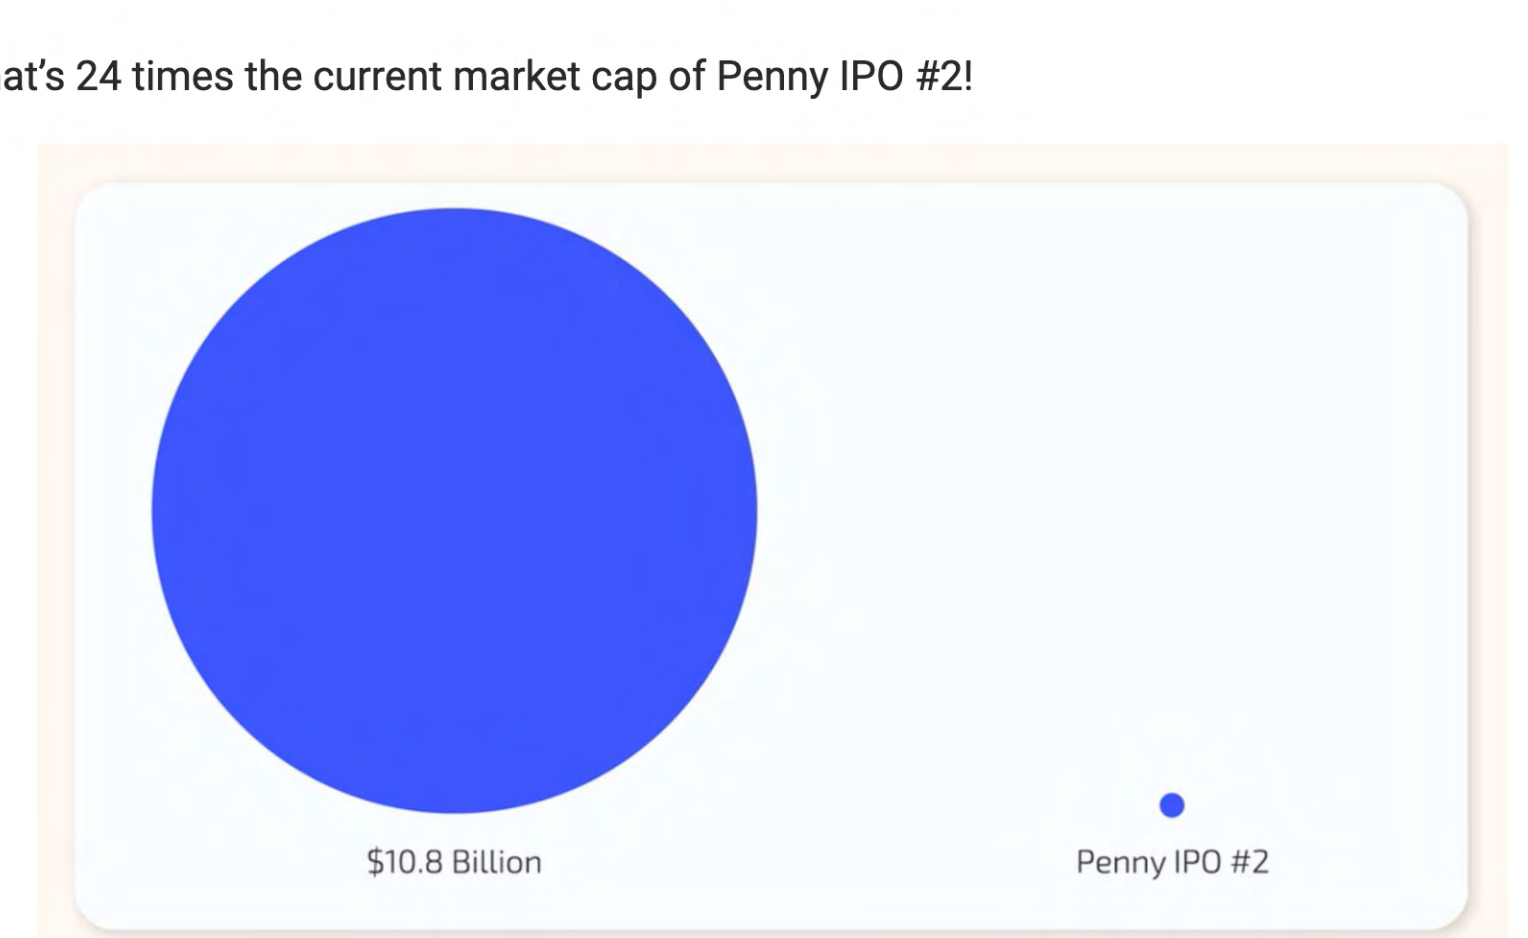
And it's totally non-invasive!

First, they are testing their technology on two types of cancer, including non-Hodgkin's lymphoma, which affects 70,000 people.

This is smart.

The global market for non-Hodgkin's treatments alone is expected to reach $10.8 billion by 2025.

That's 24 times the current market cap of Penny IPO #2!



And get this:

They just opened up a manufacturing facility to produce off-the-shelf cancer therapies… *the first building of its kind in America.*

Now, you tell me:

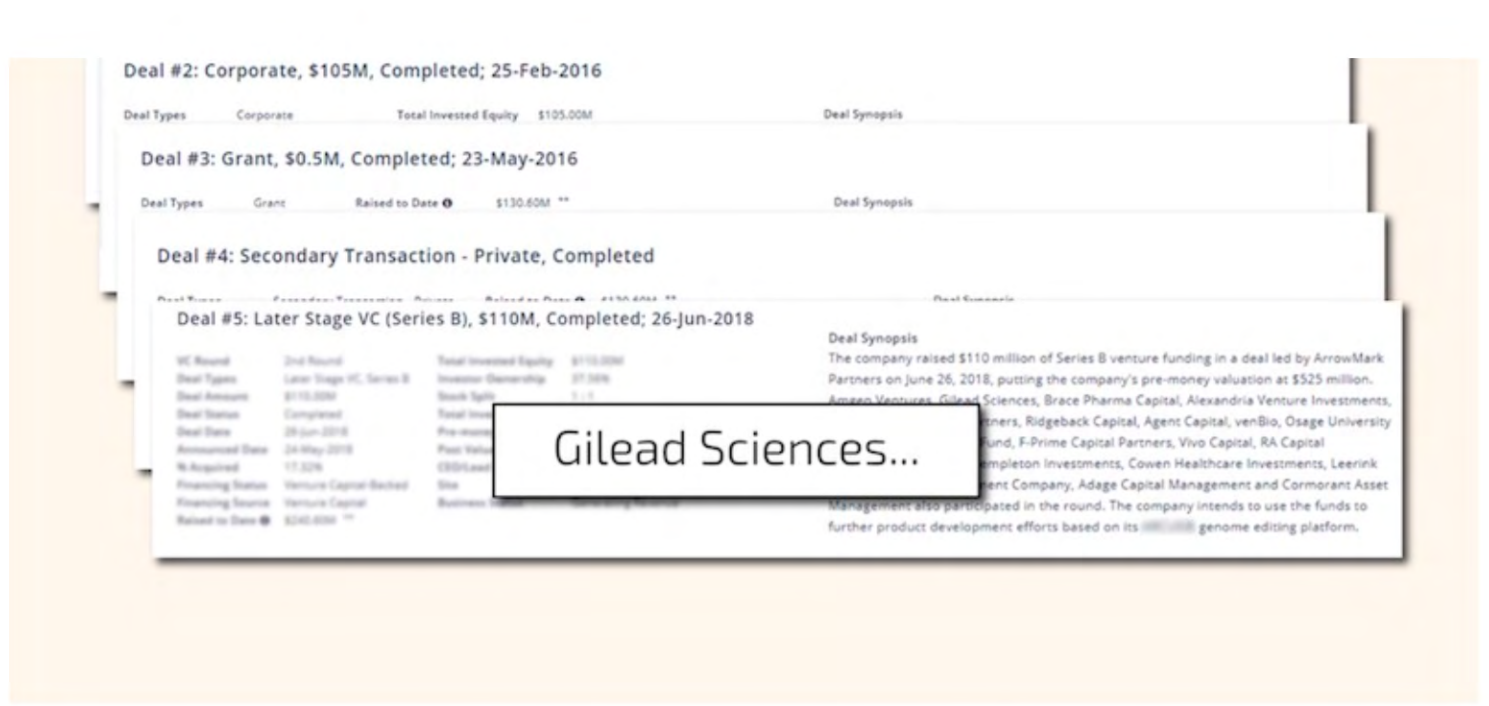
Would the board approve such a rapid roll-out if they didn't expect an immediate approval from the FDA?

Of course not!

So, we're onto something big here…

That's why the list of VCs backing Penny IPO #2 is off the charts.

- Fidelity's F-Prime is an early investor…
- As is Franklin Templeton…
- Cowen Group
- The Longevity Fund
- As well as the VC arms of several big pharma companies like Amgen, Baxter, and Gilead Sciences.



Deal #2: Corporate, $105M, Completed; 25-Feb-2016

Deal #3: Grant, $0.5M, Completed; 23-May-2016

Deal #4: Secondary Transaction - Private, Completed

Deal #5: Later Stage VC (Series B), $110M, Completed; 26-Jun-2018

Deal Synopsis

The company raised $110 million of Series B venture funding in a deal led by ArrowMark Partners on June 26, 2018, putting the company's pre-money valuation at $525 million.

Gilead Sciences…

When not one… not two… but 3 big pharmas back a small player, that's a very telling sign.

And shares are a screaming bargain right now…

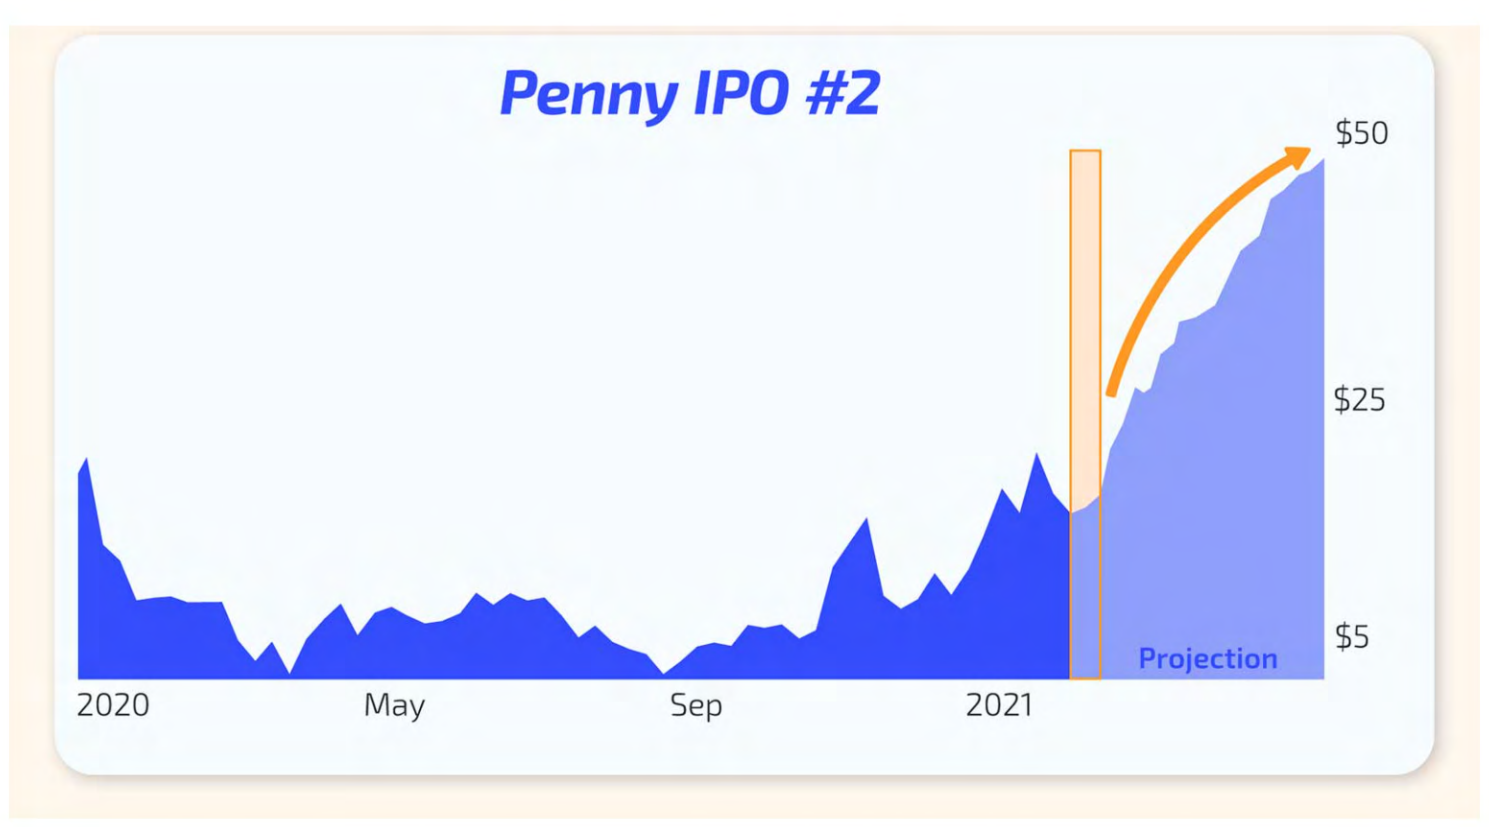
In fact, you'd pay LESS than what anyone who bought in on day 1 of the IPO did…

And the VCs know the stock is cheap, too…

Since the company recently IPOed, top holders have bought more than 2 million shares.

And even Eli Lilly invested $100 million!

I strongly recommend you load up as well. *Now.* Before the shares go skyward.

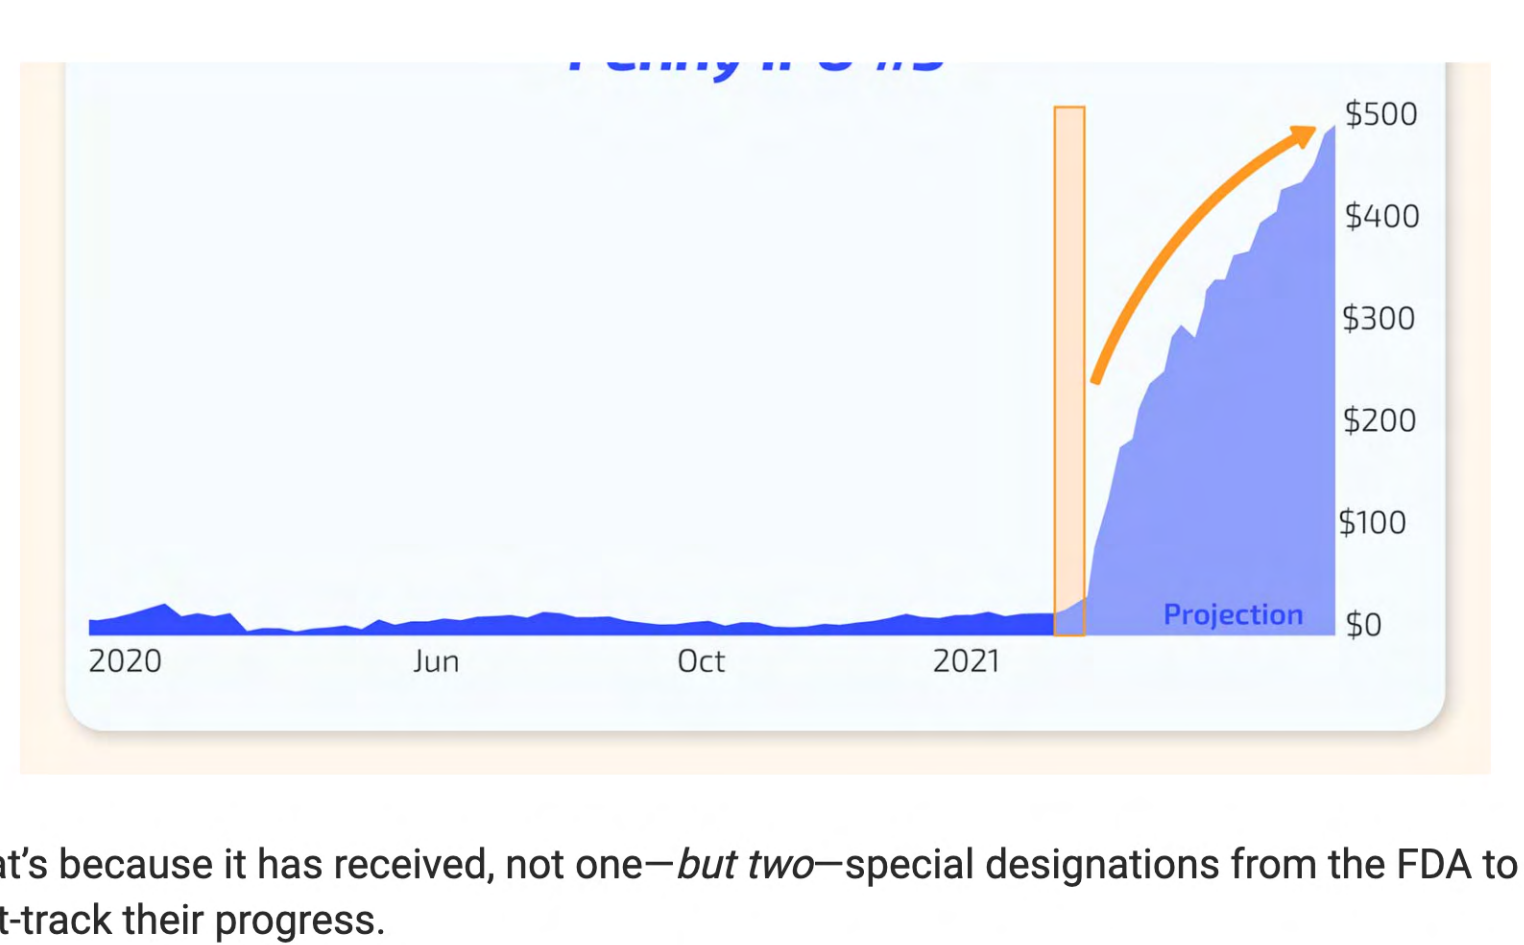


Penny IPO #3: "Fast-Tracked" by the FDA!

Last, but not least…

Penny IPO #3 could show us our biggest gain…

Faster than any other!



That's because it has received, not one—*but two*—special designations from the FDA to fast-track their progress.

And VCs love it!

In fact, even the famed "Rothschild" family has taken a big stake.

Things are moving quick…

Recently, the stock popped 33%—*in a matter of 12 days.*

And at least one important catalyst is set to hit by mid 2021.

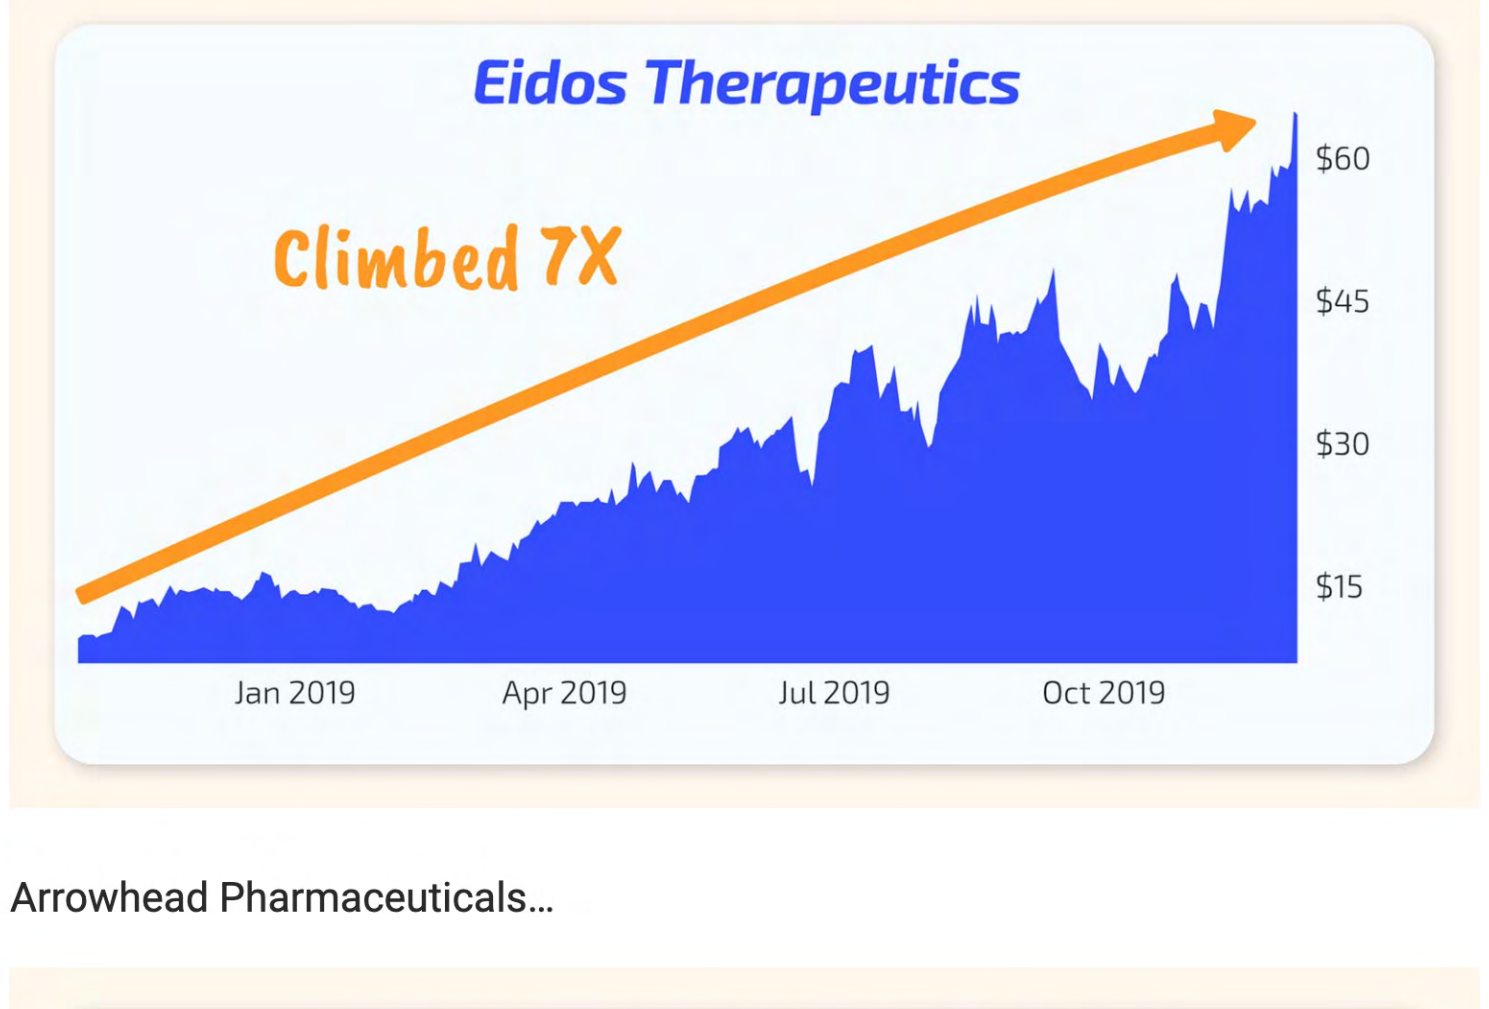
You can pick up shares today for around 65 cents on the dollar compared to folks who bought on day 1…

It's the single cheapest stock in my portfolio, a screaming bargain.

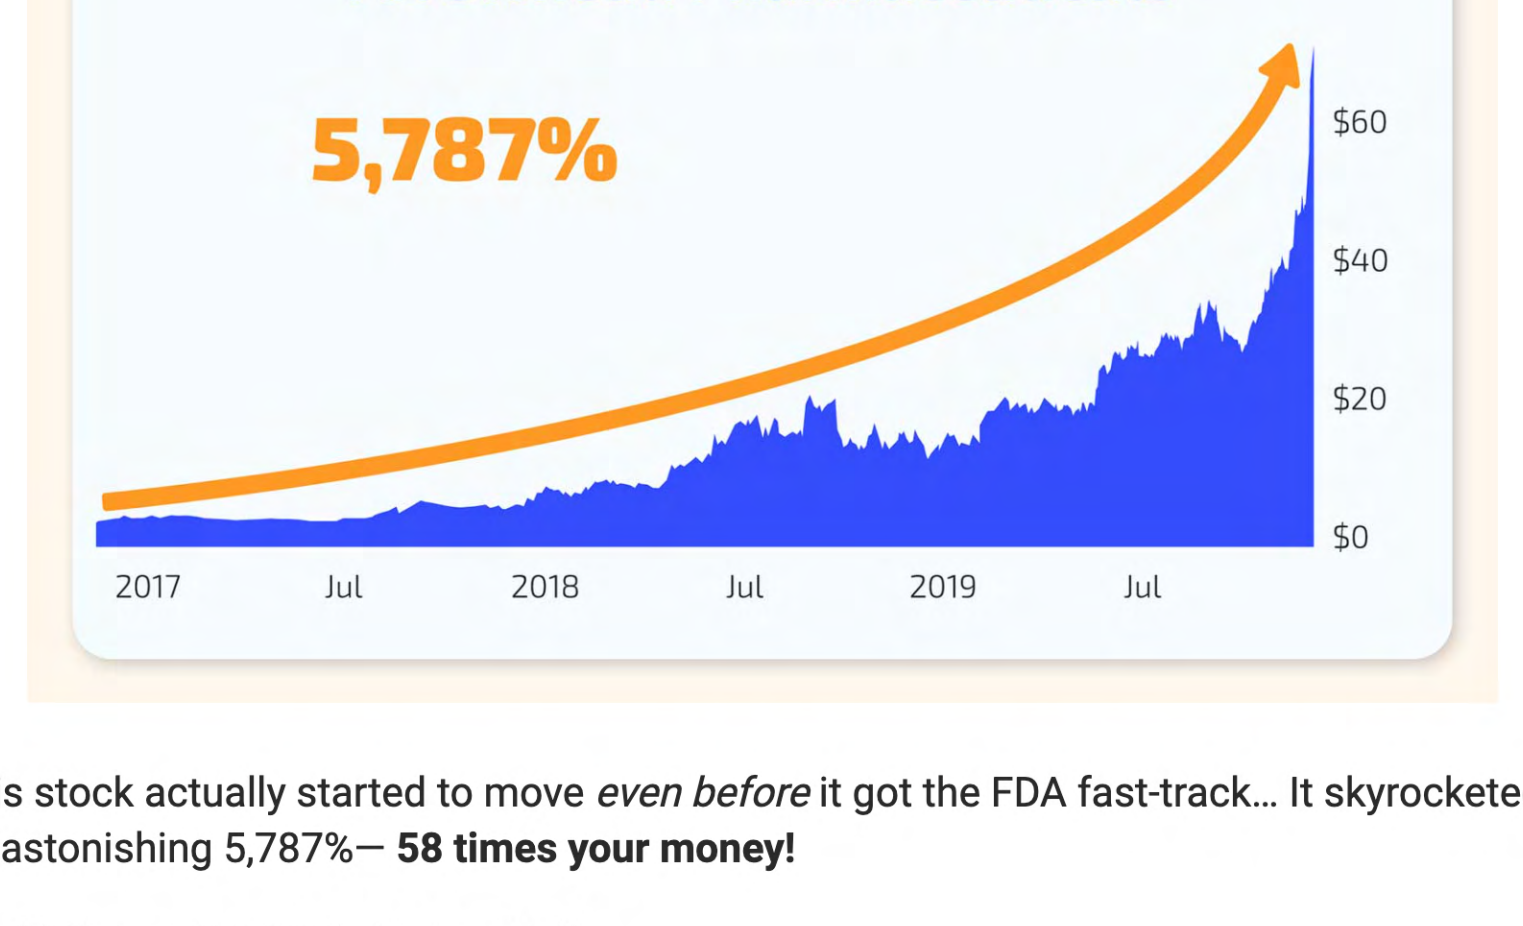
And the upside is practically endless…

That's because companies who have received similar "fast tracks" from the FDA have gone up huge…

Like Eidos Therapeutics, that climbed 7X in just over a year…



And Arrowhead Pharmaceuticals…



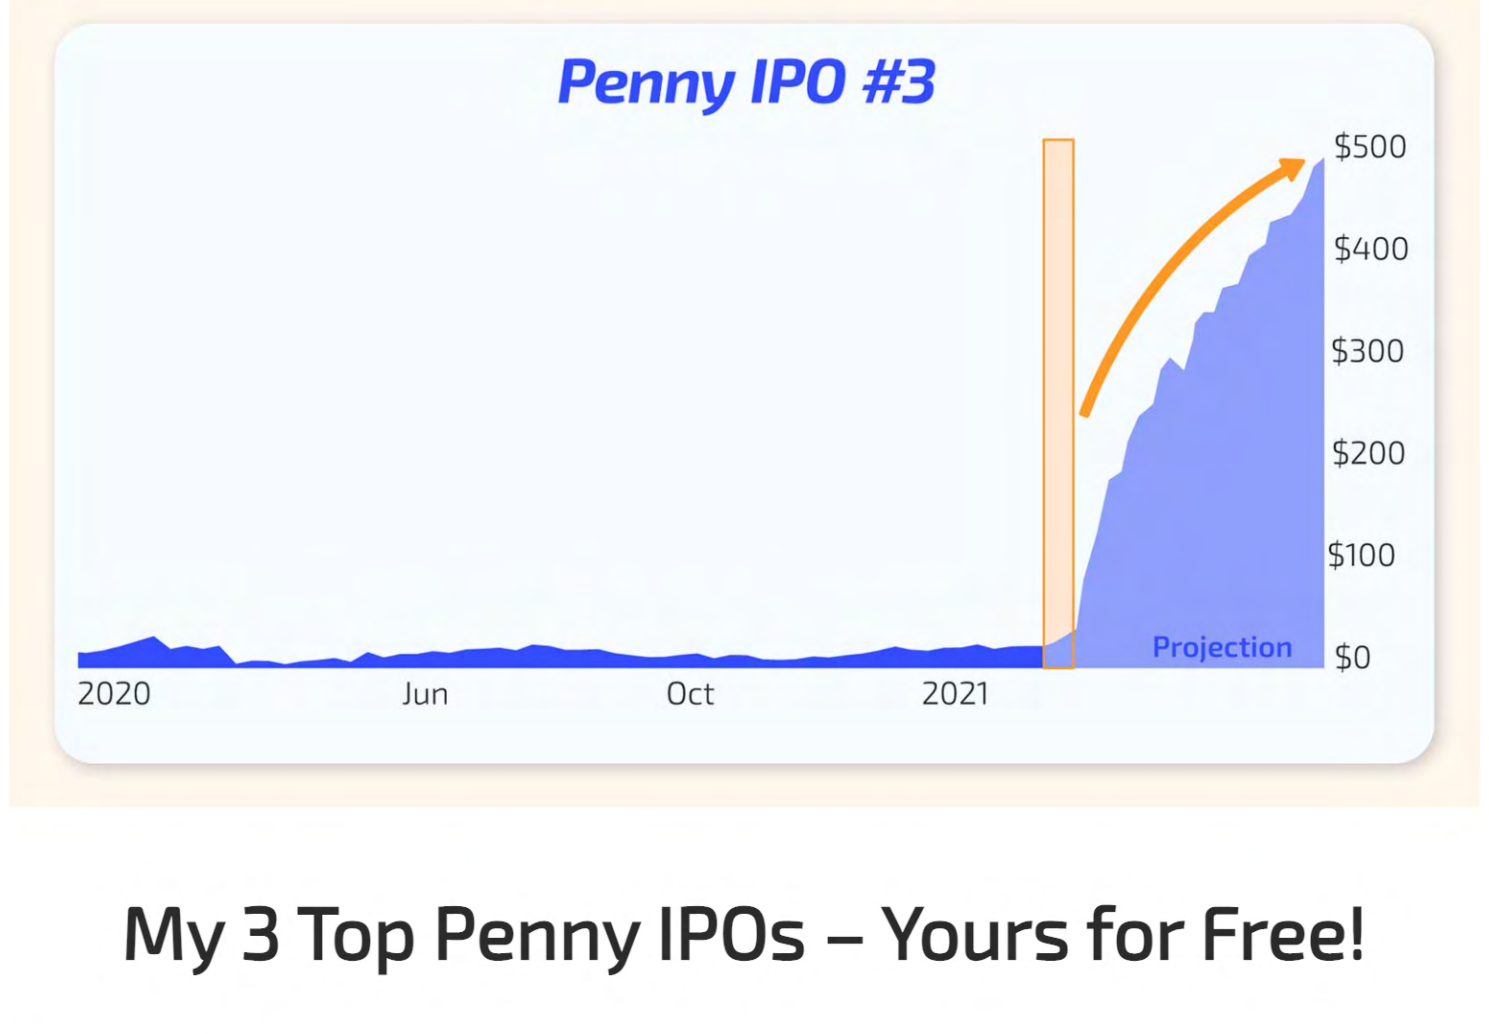
This stock actually started to move *even before* it got the FDA fast-track… It skyrocketed an astonishing 5,787%— **58 times your money!**

Could Penny IPO #3 do just as well?

While nothing is guaranteed, I believe it could.

Buy this stock *now.*

Before the day is out, if you can.



My 3 Top Penny IPOs – Yours for Free!

To help you get started…

I put together everything I know about my top 3 Penny IPOs…

Including their names, ticker symbols—a breakdown of their breakthrough medical research—VC backers, buy-up-to prices, as well as important upcoming catalysts…

Inside a premium research report called:

"Predictable Profits: My Top 3 Penny IPOs of 2021."

Predictable Profits

And, today, for the first time, I'm making it available to anyone who's seriously interested in investing.

Now, I mention "seriously" for good reason.

You see…

Yes, it's true these stocks are cheap…

And *yes,* they're predictable—unlike anything else I've ever seen.

But you have to do it right!

You have to buy only the *right* companies. At the *right* price. And sell only when the time is *right.*

We worked 5 years on this. Whittled down 630,000 stocks down to 1,182 tech IPOs…

And from there, only 88 stocks—about 1 in 7,000—illustrated the predictable, clocklike pattern that we were looking for.

I mentioned a few elements of my system earlier…

How I only look for tech stocks trading in the U.S. and that have good VC backing.

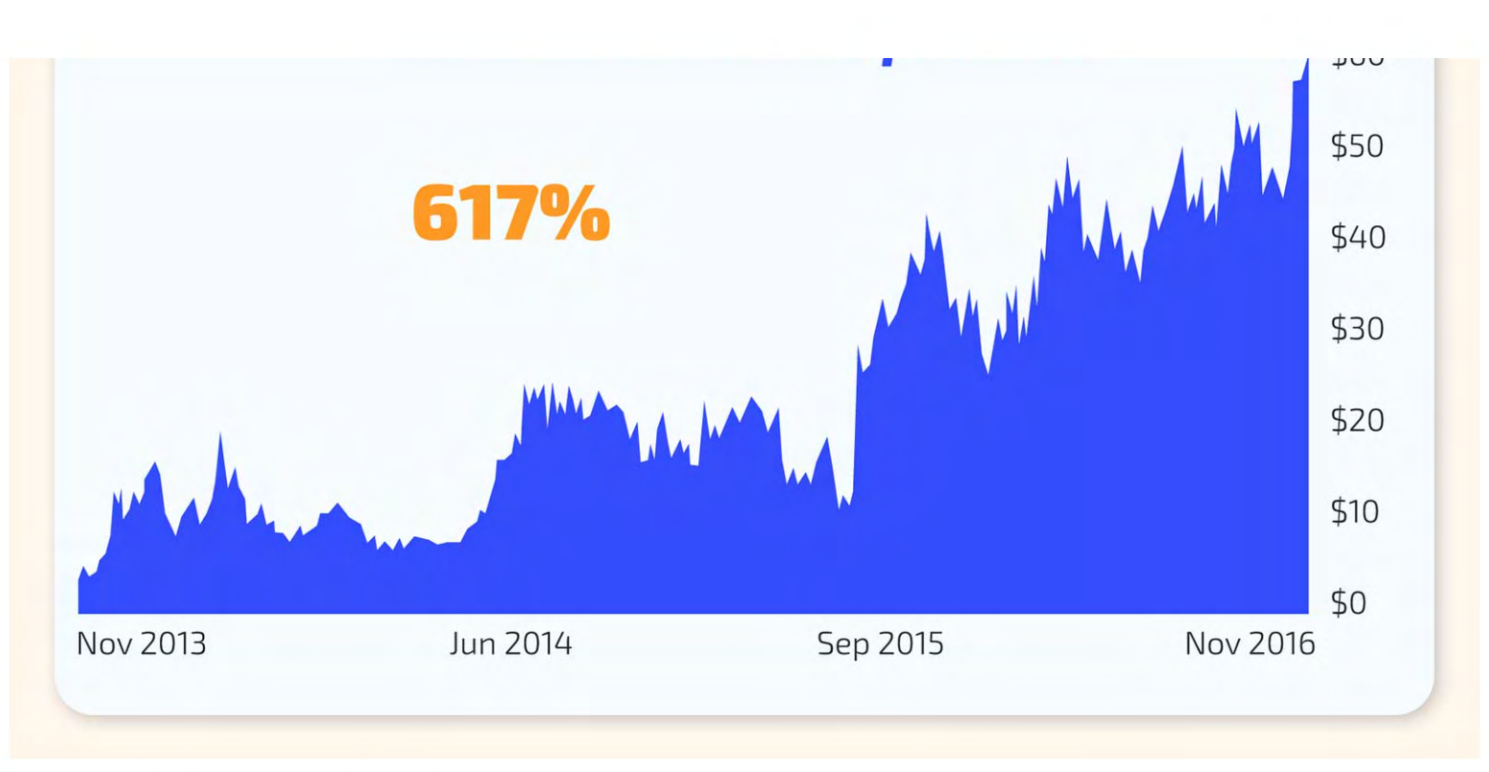
But that's only part of it!

- It also has to be a *very specific* type of biotech—that is, one most likely to spike up big thanks to an FDA filing…
- It also has to have the *right type of backer*… not all VCs, you see, are created equally. (For example, all three of my top Penny IPOs are backed by arguably *the single best biotech VC in the world*. This firm is coming off a 21X. And has invested in more billion-dollar "unicorns" than anyone else.)
- It has to be doing research based on proven, high-level science…
- In addition, they need to have what I call "bleeding edge" technology which targets a "greenfield" opportunity… meaning they invent something that—quite simply—didn't exist before!

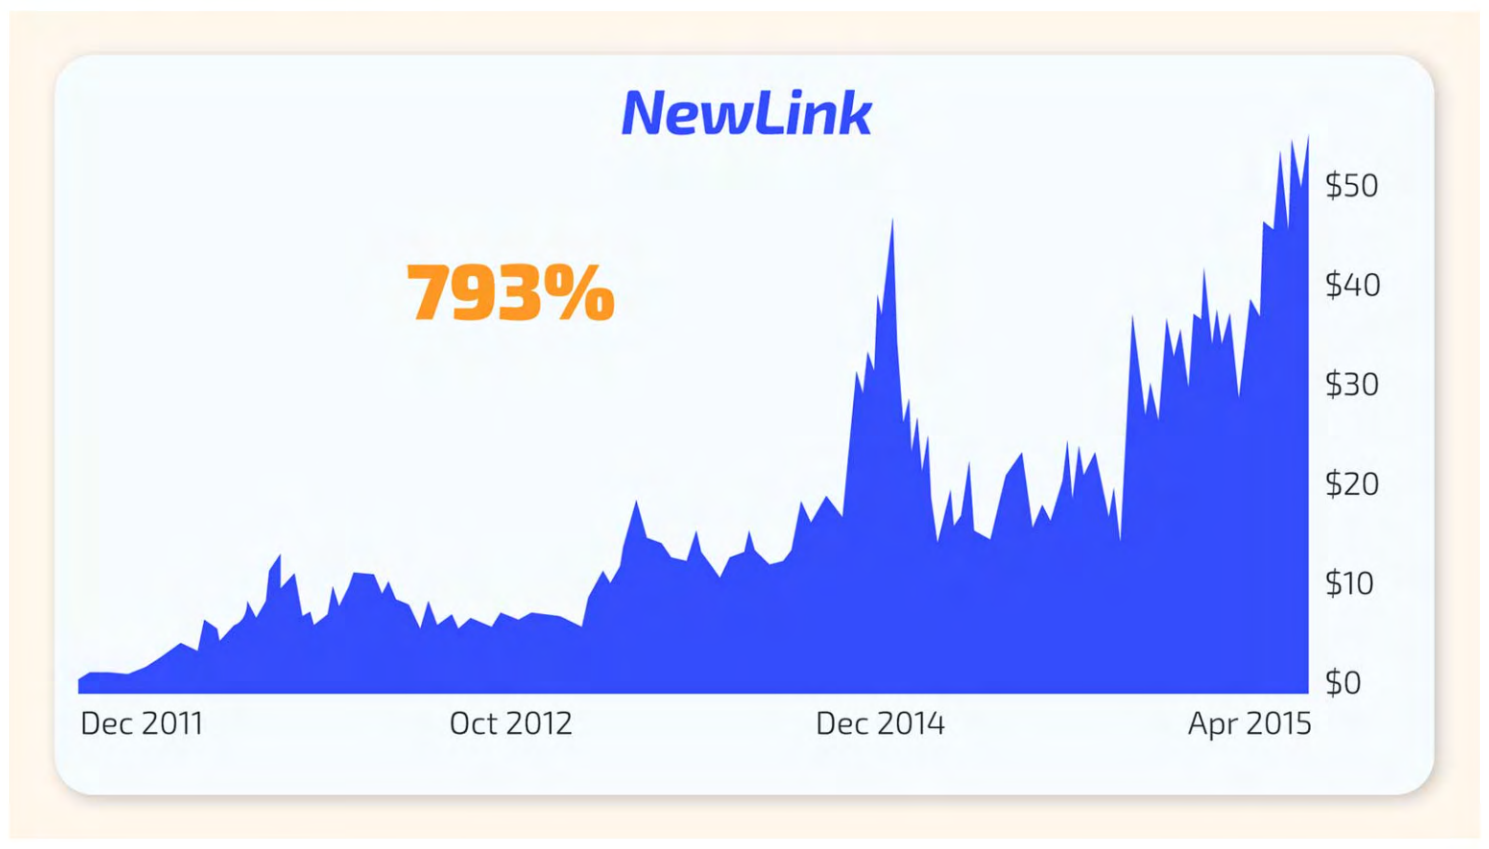
In short: I'm not just throwing darts in hopes to get lucky.

Before I launched this service, I did an extensive back-test that pinpointed Penny IPO winners 98% of the time… and delivered an average gain of 227%.

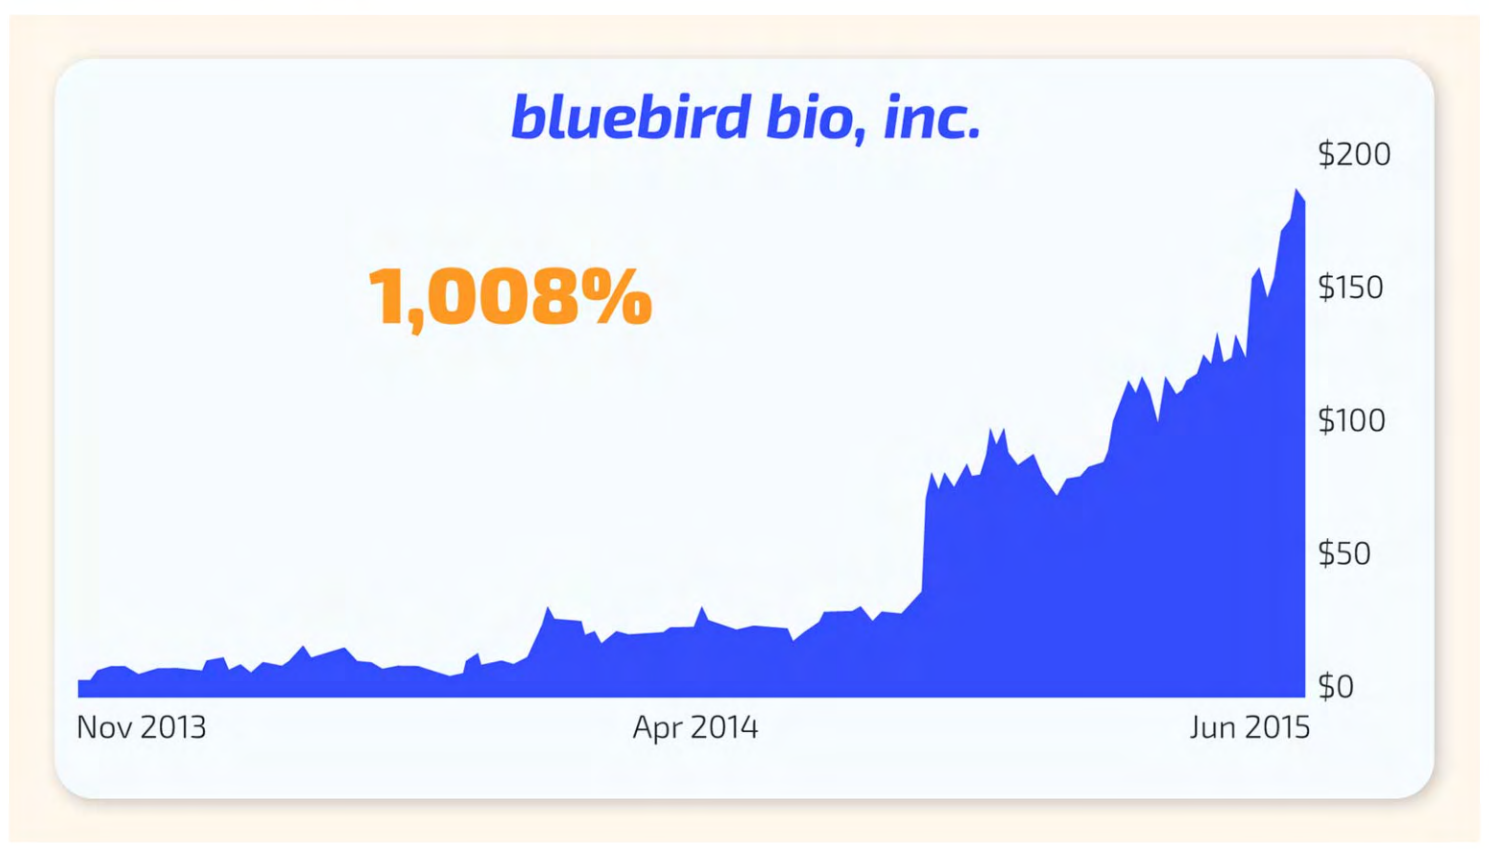
Like Five Prime, that rose 617%…



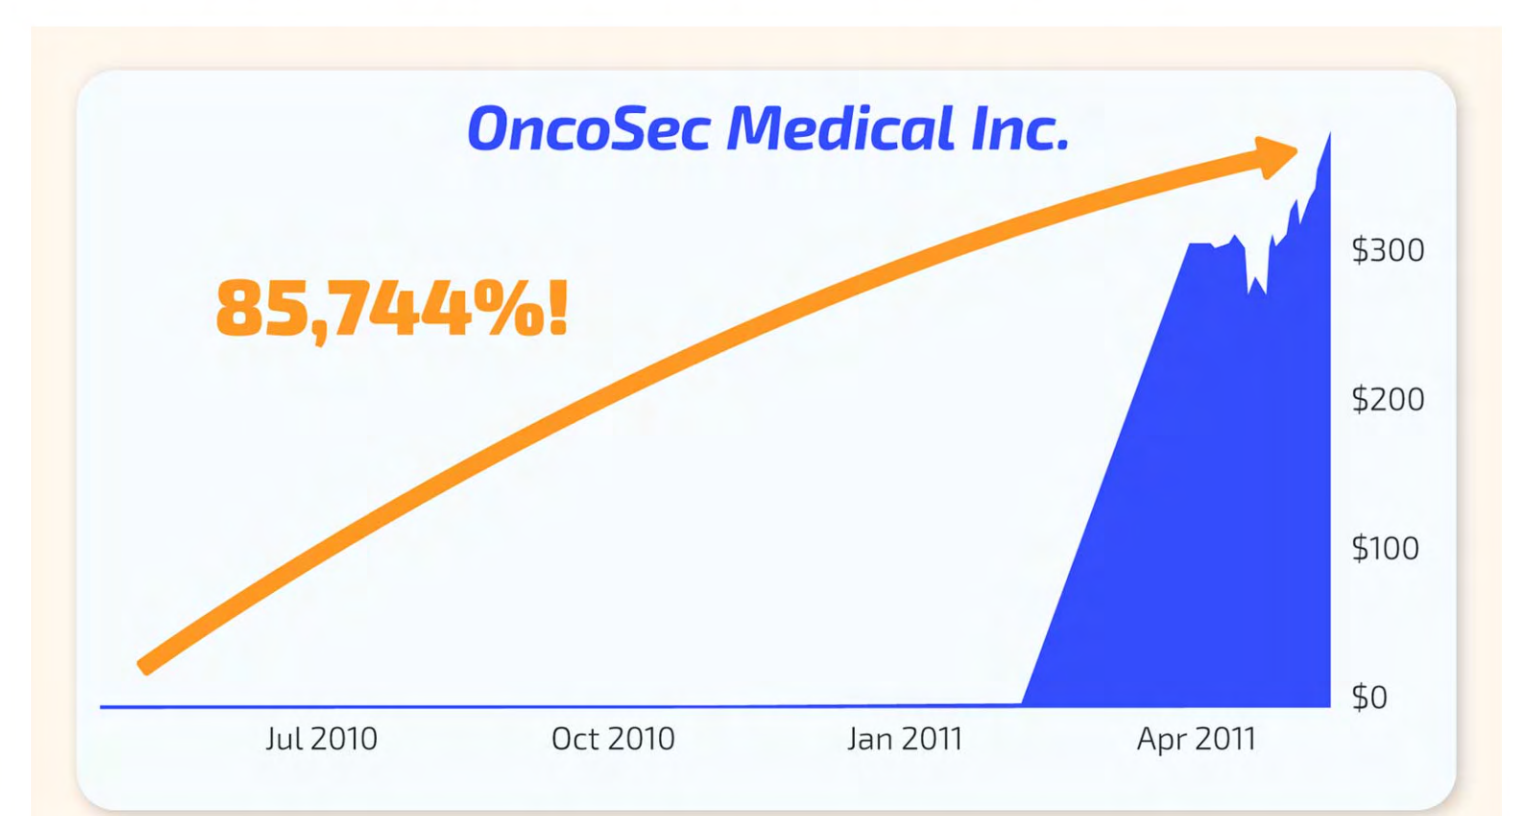
NewLink that delivered 793%…



And Bluebird that 10Xed …



Recently, I even saw an example of a Penny IPO called Oncosec, which shot up an incredible 85,000%, turning every $5,000 invested into $4.3 million.



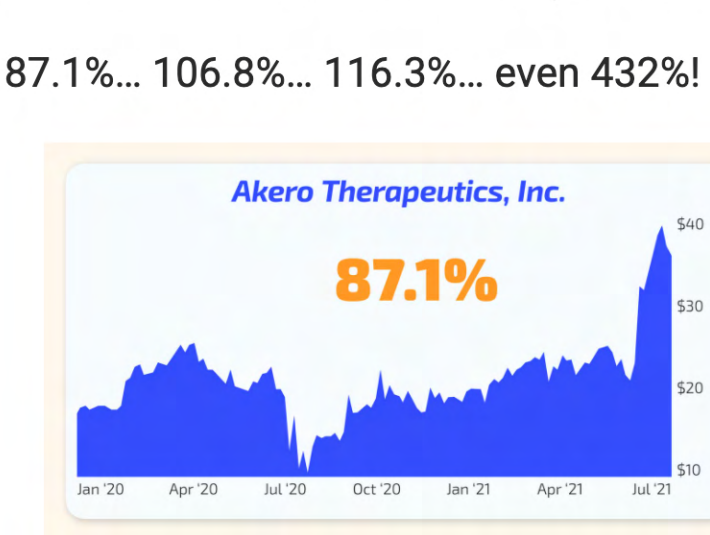
Now, obviously, those are exceptional results. And you shouldn't expect an 85,000% gain.

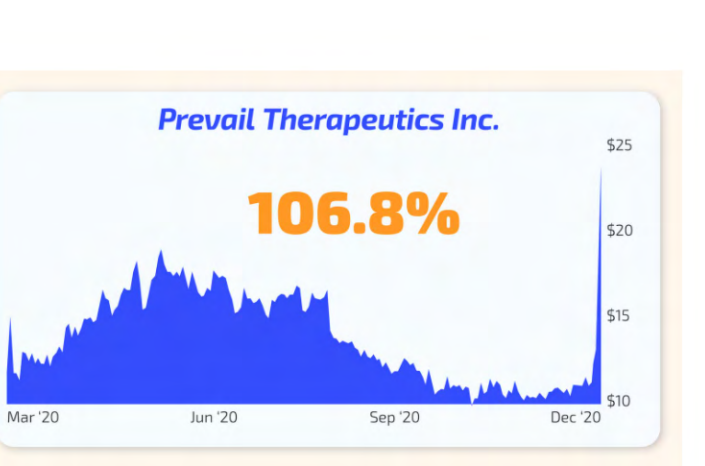
But it goes to show the astonishing potential.

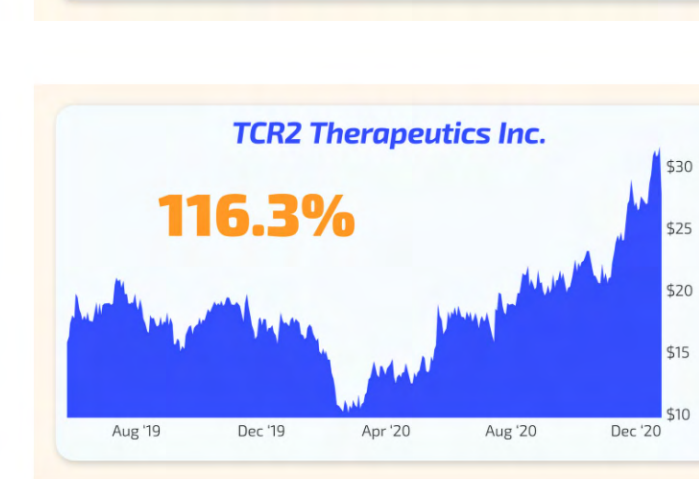
And now I've launched *Early Stage Trader* to take advantage of this amazing research. And I have put into place (and follow) a proprietary system I spend $250,000 on a year to maintain.

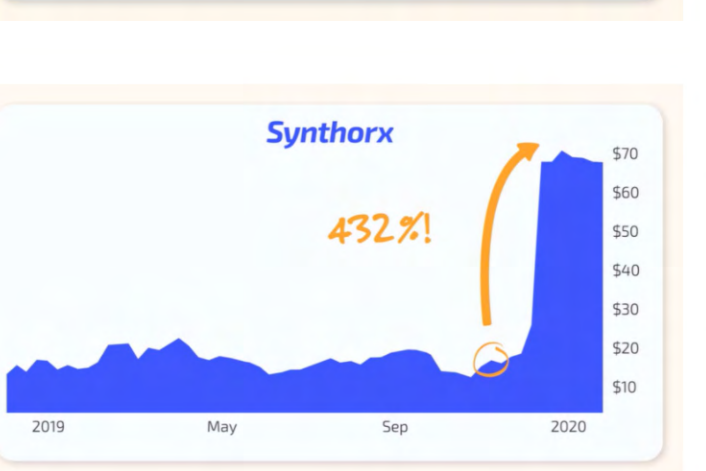
Since we started, we've already closed out on several monster winners…

87.1%… 106.8%… 116.3%… even 432%!









And that's on top of two of our open positions that are sitting as high as 167% and 136%…

And I believe that's just the beginning.

Now, of course, you could try doing this all on your own…

However, to get your hands on the raw data and research alone would set you back a quarter of a million dollars.

And, then, you'd have to know what to do with it!

Remember, it took my team YEARS to sift through all this…

Or, you could simply give my research a try.

When you do, I'll send you a copy of my ***Predictable Profits*** report for free.

All I ask in return is that you try out *Early Stage Trader,* my new research service devoted exclusively to early-stage, Penny IPO stocks.

Introducing *Early Stage Trader*

You see, here's the thing…

There aren't just 3 Penny IPOs worth looking at today.

At least one Penny IPO goes public every month…

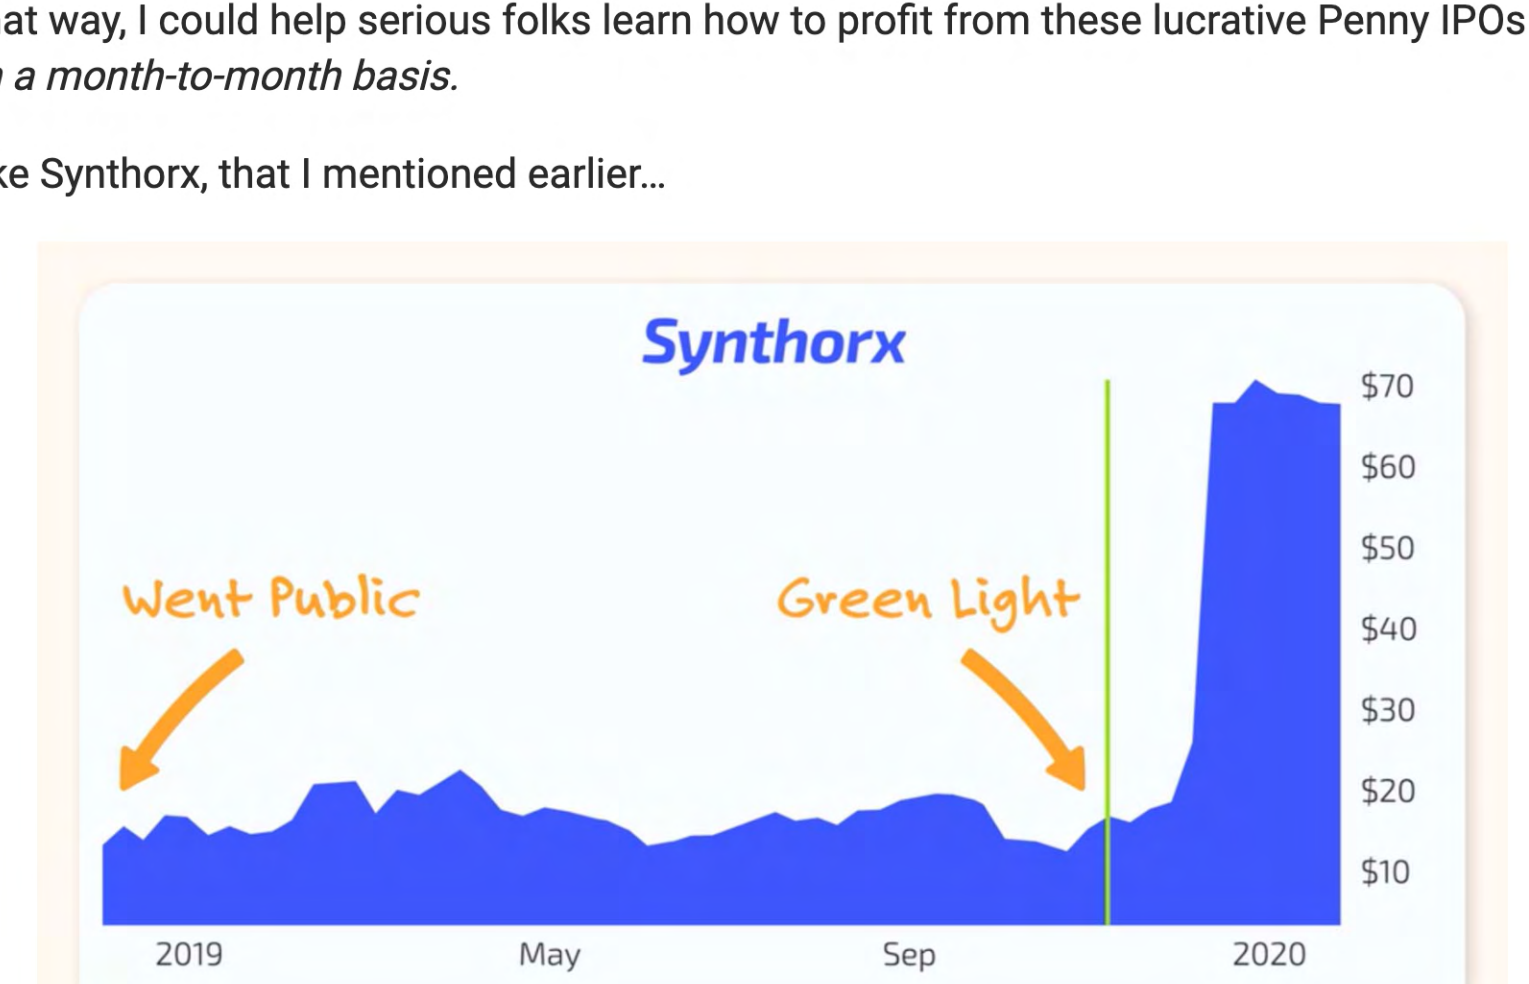
Sometimes there are as many as one a week!

This opportunity was just too massive to leave at just 3 stocks.

So, I decided to build an elite research service around it.

That way, I could help serious folks learn how to profit from these lucrative Penny IPOs—*on a month-to-month basis.*

Like Synthorx, that I mentioned earlier…



This is one of the first Penny IPOs I recommended to my *Early Stage Trader* subscribers.

Now, even though Synthorx went public back in December 2018…

I didn't recommend it right away!

That's where another part of my proprietary system comes in…

We waited for the initial pullback. And then, on October 29, 2019, my system gave me the "green light".

The timing was perfect…

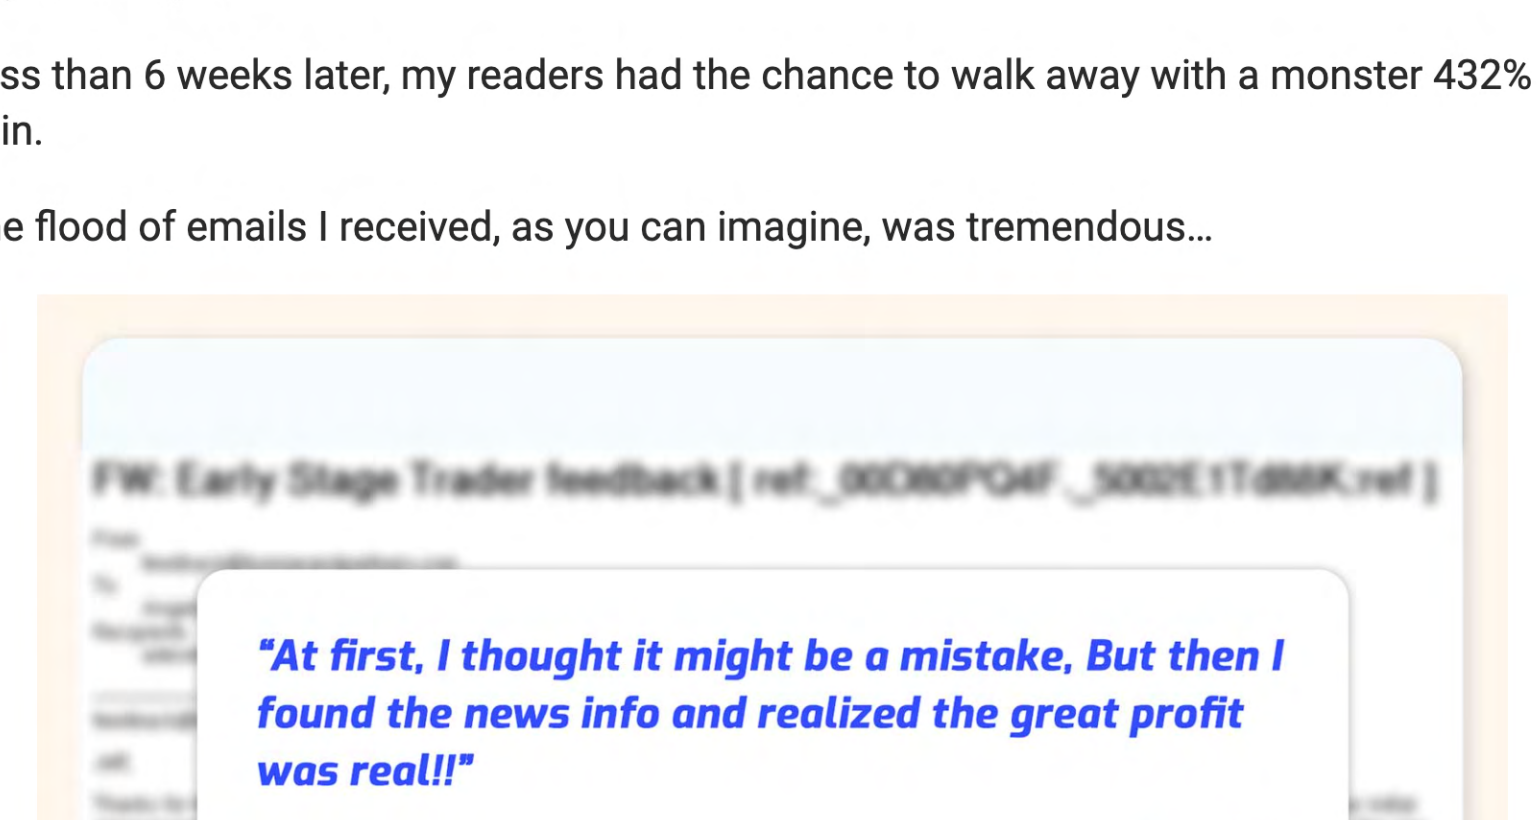
As I told my 2,600 subscribers:

"Our patience has given us a fantastic buy window… We have very little downside risk from here. Now is the time to place our trade."

Boy was I right!

Less than 6 weeks later, my readers had the chance to walk away with a monster 432% gain.

The flood of emails I received, as you can imagine, was tremendous…

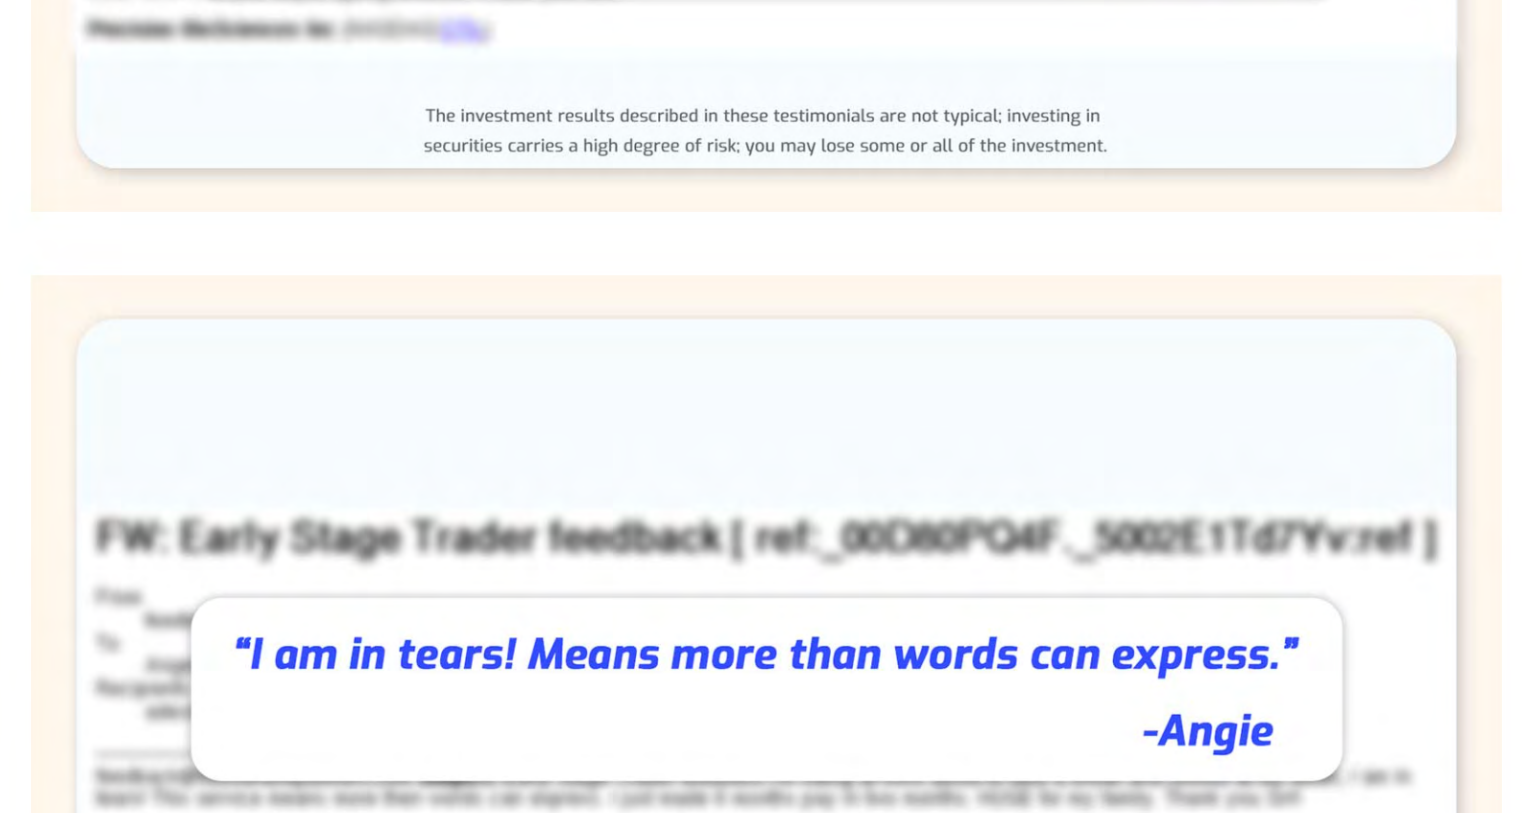


FW: Early Stage Trader feedback

"At first, I thought it might be a mistake, But then I found the news info and realized the great profit was real!!"

— David B.

The investment results described in these testimonials are not typical. Investing in securities carries a high degree of risk; you may lose some or all of the investment.

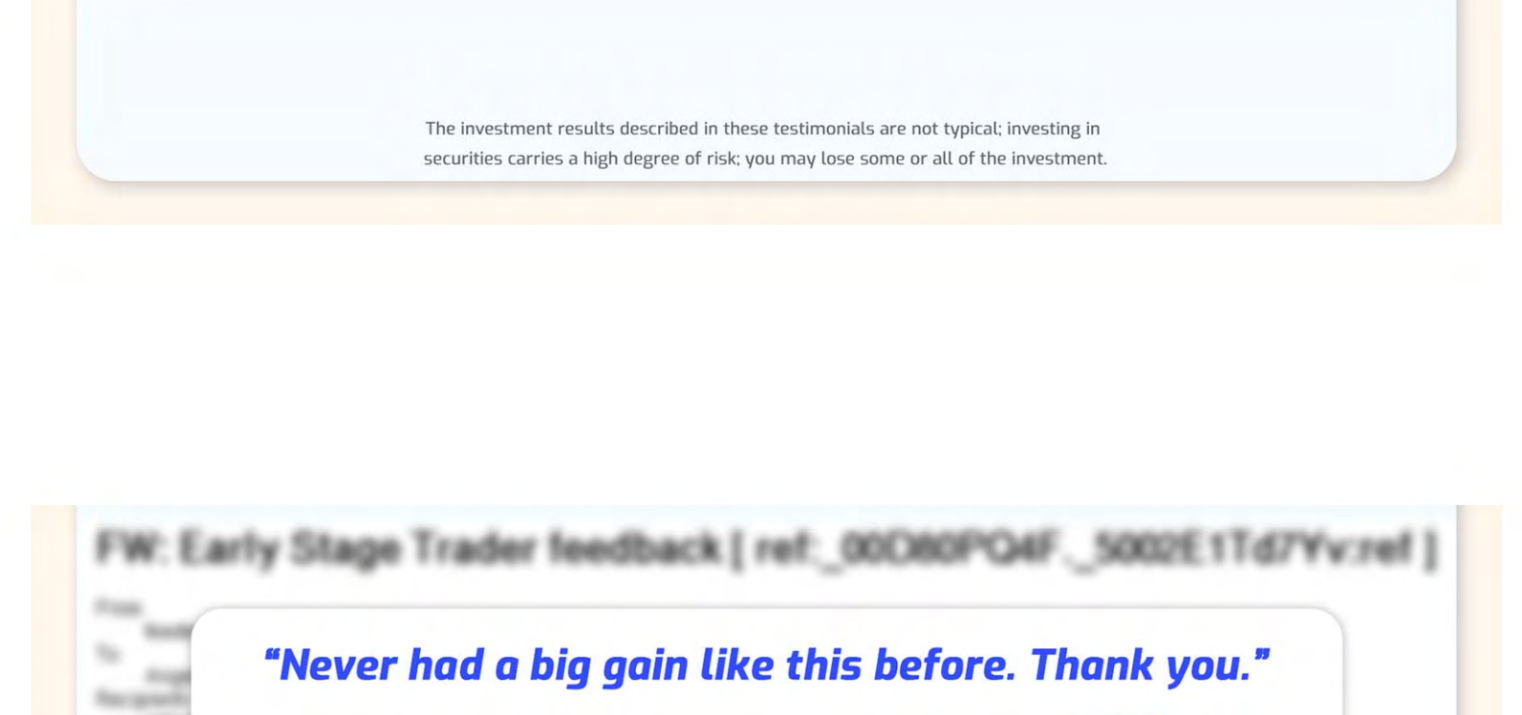


FW: Early Stage Trader feedback

"I am in tears! Means more than words can express."

-Angie

The investment results described in these testimonials are not typical. Investing in securities carries a high degree of risk; you may lose some or all of the investment.



FW: Early Stage Trader feedback

"Never had a big gain like this before. Thank you."

-William C.

The investment results described in these testimonials are not typical. Investing in securities carries a high degree of risk; you may lose some or all of the investment.

Why did I launch *Early Stage Trader*?

It's for people like Angela and William.

I've had a great life.

And I've been blessed with a great family and two young sons who inspire me every day.

But the fact is, early-stage investing has provided me with all of this.

And I just love what I do way too much to retire!

That's why, even though I recently turned 50 and am now at an age where most of my peers are slowing down…

I keep aggressively pursuing new degrees and advanced certificates.

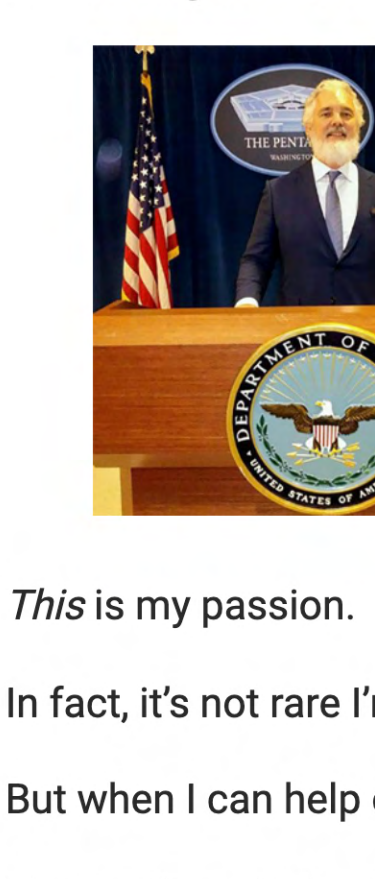
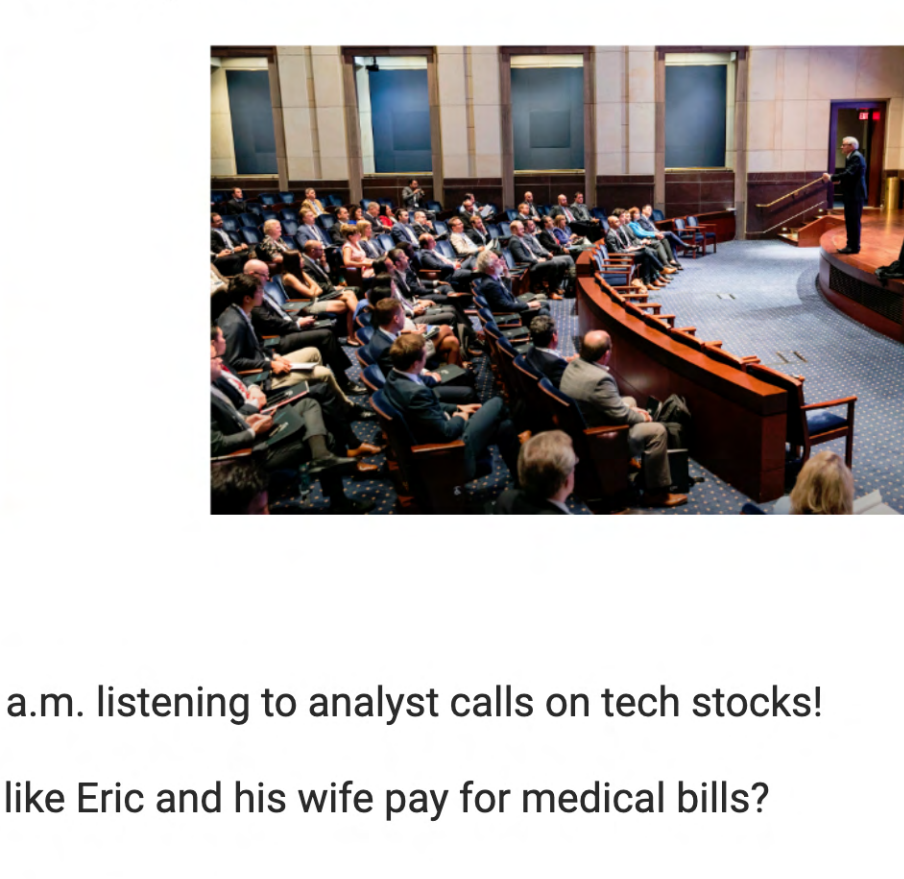
It's why I also recently met with members at the highest levels of our national defense and intelligence community to share my expertise…





This is my passion.

In fact, it's not rare I'm up at 5 a.m. listening to analyst calls on tech stocks!

But when I can help out a guy like Eric and his wife pay for medical bills?

That makes all the difference.

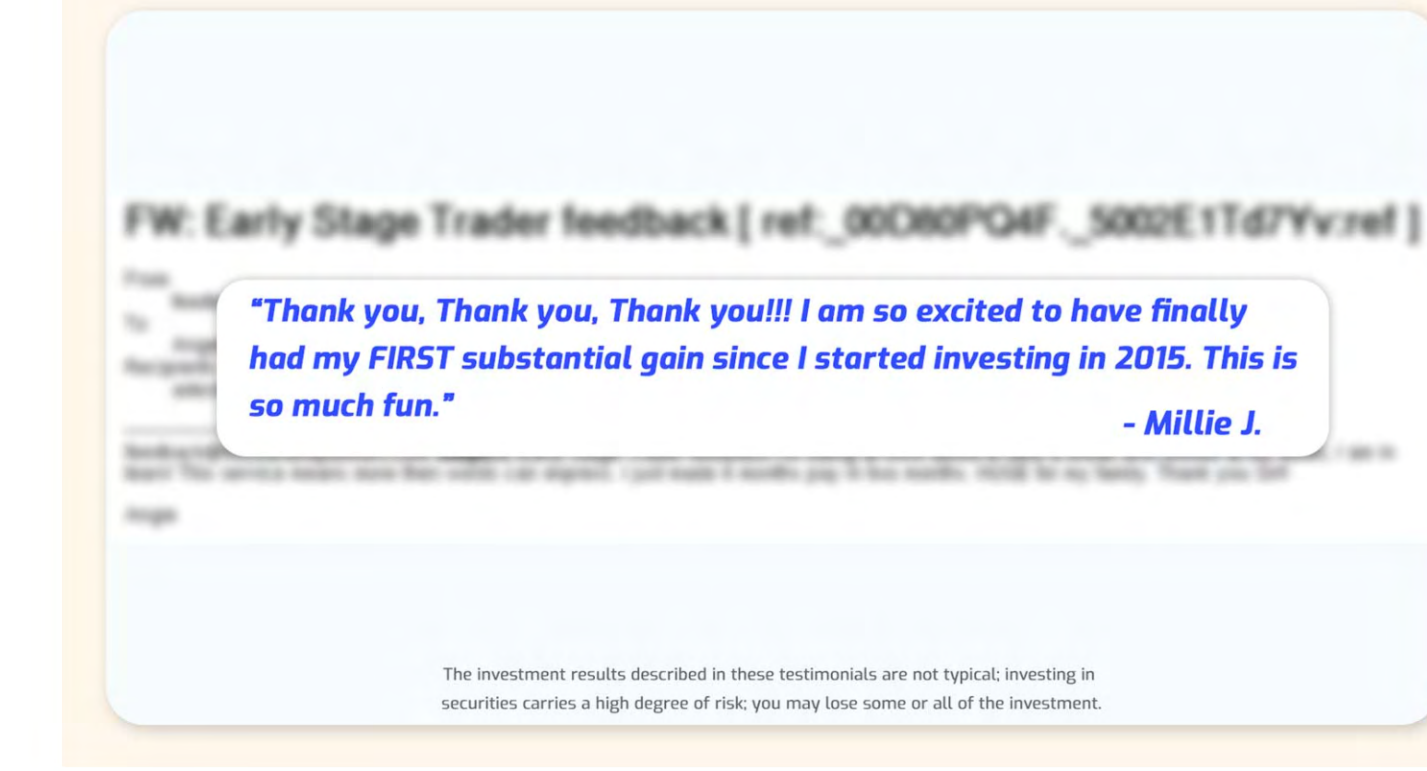
And is what really keeps me going.

With *Early Stage Trader,* I finally have the tool I've always wanted.

This is a service for people who are *fed up* with getting Wall Street's scraps. For people who want to profit from early-stage investments *the right way* … where we are aiming to win 98% of the time.

In short, this is a service for people who finally want to claim their fair share!

Like Millie, who emailed me back in January to say…



FW: Early Stage Trader feedback

"Thank you, Thank you, Thank you!!! I am so excited to have finally had my FIRST substantial gain since I started investing in 2015. This is so much fun."

- Millie J.

The investment results described in these testimonials are not typical. Investing in securities carries a high degree of risk; you may lose some or all of the investment.

Now…

Since this is my most elite research service…

And it's the only one of its kind on the planet to my knowledge…

It does come at a somewhat steep price.

Which is necessary…

Remember, one million people around the world follow my work.

And these Penny IPOs are *tiny!*

In fact, I recently looked at the numbers… and the stocks I recommend in *Early Stage Trader* are… on average… 200 times smaller than those I recommend in my flagship research letter, *The Near Future Report.*

So, I can't possibly share my Penny IPO research with everyone.

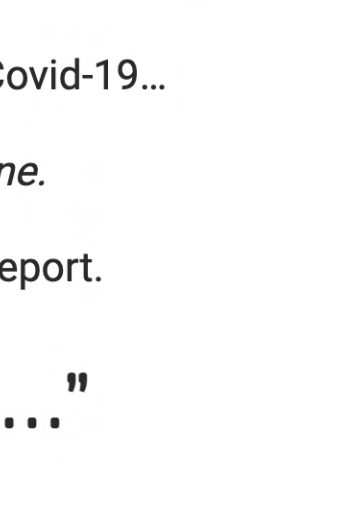
Not even close.

The only way to keep this a small group is by charging a price that truly reflects its value.

Having said that, I spoke with my publisher. And—for a brief period of time—we've put together a generous offer to reward the serious type of folks we're looking for.

But, before I get to that, there are two additional resources I want to put in your hands right away…

The Secret of the "Magic Window"!



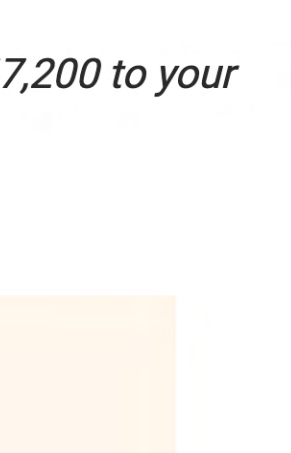
The first is a report we put together called **"The Secret of the Magic Window: How Penny IPOs Can Add $347,200 to Your Portfolio."**

This report explains every part of the predictable, clockwork Penny IPO pattern in detail…

Including what I call the "magic window," which can let you multiply your returns as much as 6 times over.

While obviously every portfolio size is different… Inside the report, I show an example of how this secret could boost an average portfolio by as much as $347,200. Or even more!

My Penny IPO "Watch List"



Then, there's my Penny IPO "Watch List" …

I'm going to let you "peek over my shoulders" and see the stocks I'm tracking for future recommendations.

There's one stock in there *I'm extremely bullish on…* Another is backed by Apple's Tim Cook. And another two are backed by Bill Gates!

As you can see, tech moguls are investing big money in today's small biotechs…

And it's not just because of all of the interest drummed up because of Covid-19…

But because they offer the highest-potential in the market today, *bar none.*

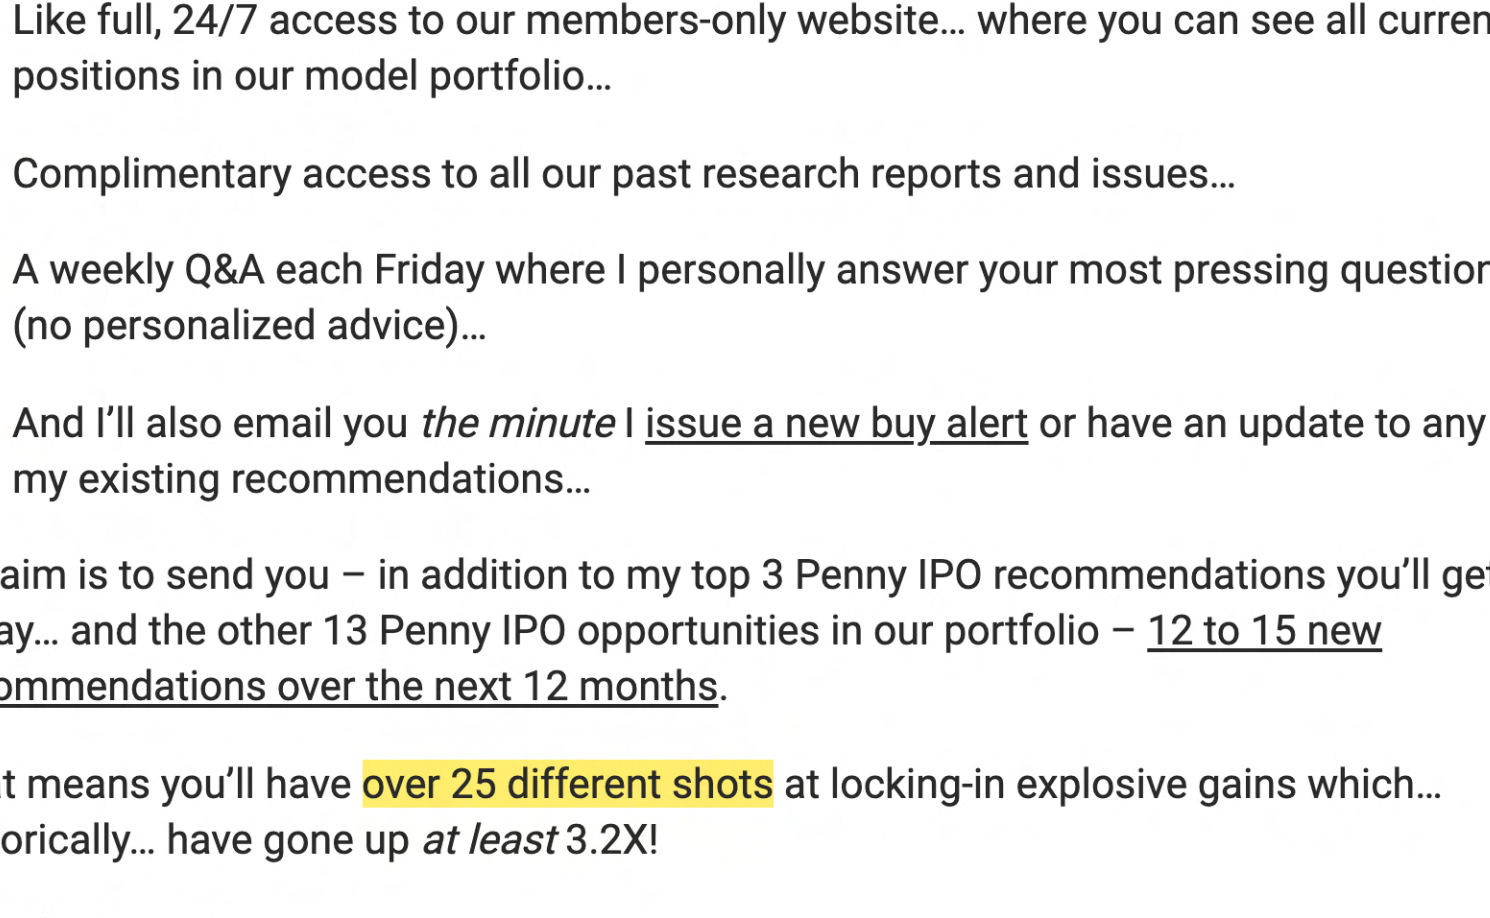
And you'll get my full "next 10" inside my special "Watch List" insider's report.

"My Special $151,740 Guarantee…"

So, to recap…

By accepting one of our membership slots today, you'll receive – instantly, and by email – my three premium reports:

1. *Predictable Profits: My Top Three Penny IPOs of 2021*
2. *The Secret of the Magic Window: How Penny IPOs Can Add Up to $347,200 to your Portfolio*
3. As well as my IPO "Watch List"



EARLY STAGE TRADER
The Secret of the Magic Window
Predictable Profits
Jeff Brown's Penny IPO Watchlist

These are all current, up-to-date reports. And each could be worth a small fortune to you. But you're getting them for free with your membership!

And, of course, that's on top of everything else that comes standard with your *Early Stage Trader* membership…

- ✓ Like full, 24/7 access to our members-only website… where you can see all current positions in our model portfolio…
- ✓ Complimentary access to all our past research reports and issues…
- ✓ A weekly Q&A each Friday where I personally answer your most pressing questions (no personalized advice)…
- ✓ And I'll also email you *the minute* I issue a new buy alert or have an update to any of my existing recommendations…

My aim is to send you – in addition to my top 3 Penny IPO recommendations you'll get today… and the other 13 Penny IPO opportunities in our portfolio – 12 to 15 new recommendations over the next 12 months.

That means you'll have over 25 different shots at locking-in explosive gains which… historically… have gone up *at least* 3.2X!

Now, for the price…

Listen, I respect your intelligence.

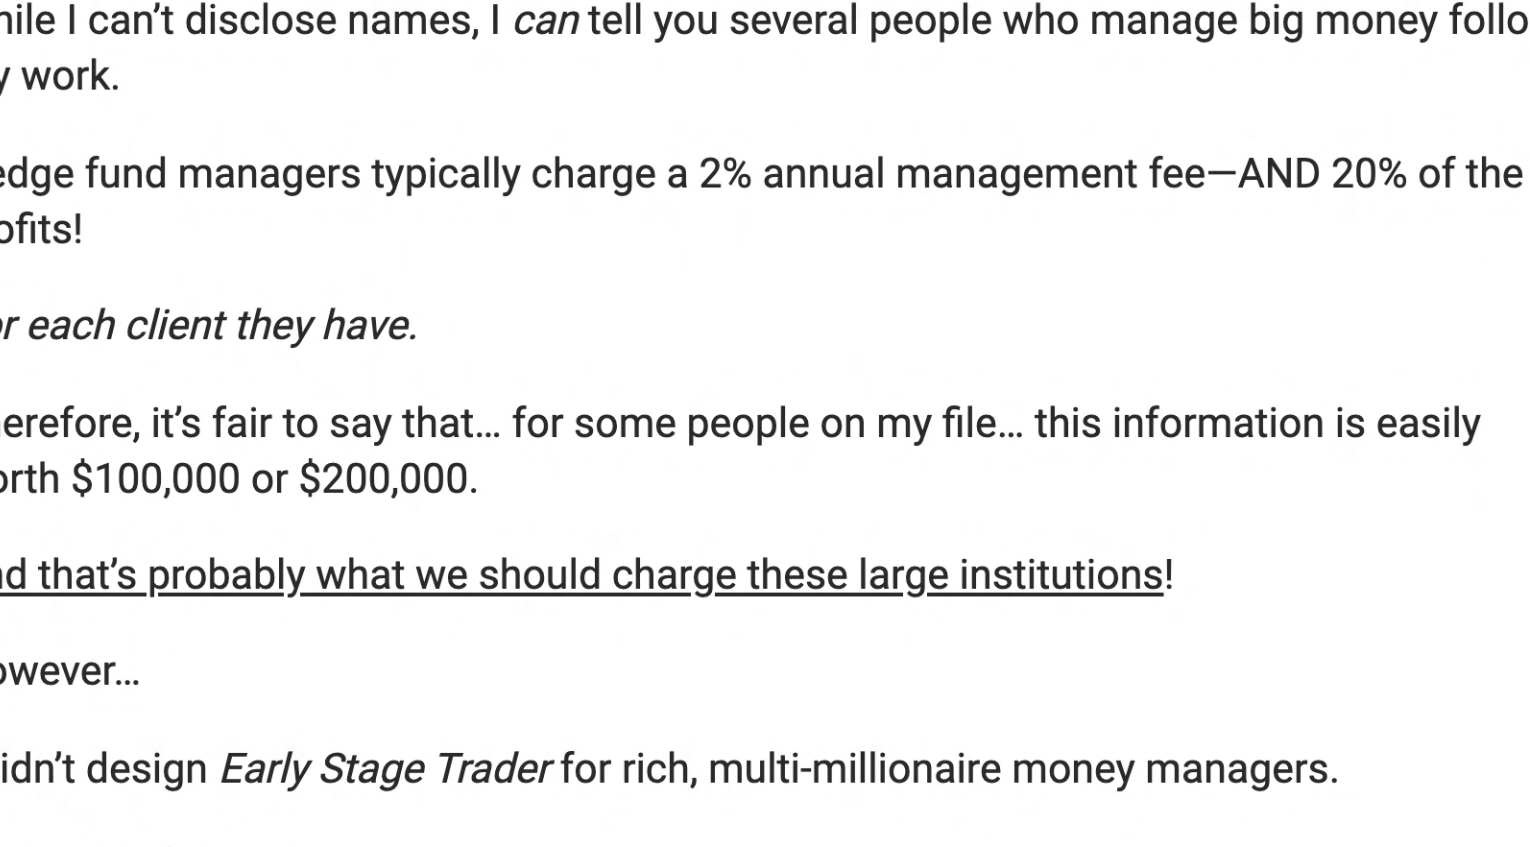
So, let me ask you…

What do *you* think this service like this is worth?

It took my team and I five years to develop my proprietary Penny IPO system. And it costs $250,000 a year to maintain…

On top of that, my first four closed trades are averaging 185.6%.

(For comparison, that's 25 TIMES what the average hedge fund makes in a year!)



What is research like that worth to you?

Now…

While I can't disclose names, I *can* tell you several people who manage big money follow my work.

Hedge fund managers typically charge a 2% annual management fee—AND 20% of the profits!

For each client they have.

Therefore, it's fair to say that… for some people on my file… this information is easily worth $100,000 or $200,000.

And that's probably what we should charge these large institutions!

However…

I didn't design *Early Stage Trader* for rich, multi-millionaire money managers.

I created it for you!

That's why the retail price is not $200,000, $100,000, or even $50,000.

It's only $5,000.

Now, to be sure, that's not "cheap."

And if that's too much for you right now, that's totally fine.

However…

If you are in a position to act today…

Remember that… while nothing is guaranteed…

Just one single recommendation could be enough to buy *several years' worth* of the service…

For example, if you put 10K into Synthorx your stake would have gone up enough to pay for 10 years of *Early Stage Trader!*

That's why I consider $5,000 a more than fair price.

But given this situation is so urgent…

And I want to encourage you to take action *today…*

Here's what I decided to do:

I spoke with my publisher. And, for the duration of this campaign… for as long as new membership slots are available… we've agreed to make the following offer:

We're going to knock off $2,500 from the retail price. So, all you pay today is $2,500.

Half off!

Here's what I suggest:

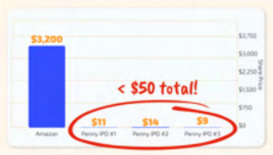
I recommend you take this $2,500 savings and invest it in my top 3 Penny IPO plays.

This "seed" money could go up big…

Remember, a competitor to Penny IPO #1 recently went up 8X …

And other "fast track" stocks like Penny IPO #3 have gone up as much as 58 times over!

If you see even a fraction of those gains it could be life changing…



Now, of course, no investment is guaranteed. And past performance does not equal future success. So, you should never invest more than you are willing to lose…

But, in my opinion, the path forward right now is clear.

All you need to do right now is simple:

1. Get the report
2. Buy the 3 stocks
3. Just sit back and wait for the potential spikes to come.

I'll tell you exactly when to cash out.

All you need is a regular brokerage account.

I recommend – at the very least – you buy a small stake in each of the three Penny IPOs.

OK?

And, of course, you risk virtually nothing by acting today on this offer…

That's because you're covered by **my personal $151,740 "Triple Sure-Shot" Guarantee**!

Simply put, give my *Early Stage Trader* a try today.

I will personally promise you that:

Personal Guarantee

Jeff Brown's Personal $151,740
"Triple Sure-Shot" Guarantee!

Inside our model portfolio, you will see *at least* 12 recommendations over the next year that will each double, bare minimum…

At least one recommendation will soar 1,000%…

And, at the end of 12 months, you'll see our model portfolio grow **by at least $151,740**, given $5,000 into each recommendation…

It's pure math, based on the predictable results we saw in our backtest!

Simply put: If I don't go "3 for 3," I hereby guarantee that I will work for an extra year for you… for free! You'll get another 12 months of *Early Stage Trader* "on the house."

Now, of course, you don't have to invest $5,000 into each recommendation. Only invest what feels right to you. I believe you'll see great gains no matter what.

But, as you can see, I'm *very* confident in my research…

That's why I'll even send you a signed certificate that you can download (or even print) for future reference!

Jeff Brown's
$151,740 "Triple Sure-Shot" Guarantee

Mark this day down!

Because, in a year from today, I expect you will be significantly much better off.

And as if that weren't enough…

If, for some reason, you sign up today but have a change of heart…

No problem!

I'll give you 90 days to receive a full credit that you can apply toward any of my other premium services… or any research service from my partners at Legacy Research Group.

I believe this is the most powerful guarantee that has ever been offered in the history of the financial publishing industry. Because *I'm just that confident* these Penny IPOs can work a financial miracle in your life.

Last…

Here is another thing I will guarantee:

The price for *Early Stage Trader* will likely never be this cheap again.

In fact, when discussing this offer, at first my publisher wanted to set the price at $3,000—*minimum.*

Remember, these are *tiny* stocks…

100 to 300 times cheaper than Uber.

And cheaper even than Amazon was 20 years ago!

And there simply aren't enough Penny IPOs to go around!

So, unfortunately, the price will need to keep going up in the future.

That means…

If these early-stage Penny IPOs appeal to you, *now* is the time to act.

Today.

When you can still get into *Early Stage Trader* for $2,500.

(And, even better, you'll be locked into today's low yearly price. So, it's really the best time to try it out.)

You should now see a link underneath this video.

Click it.

It will take you to our secure order form.

I recommend you fill it in right now. Because we're going to keep a close tab on how many people sign up…

Because these are very small stocks, at any moment—and without notice—my publisher has reserved the right to close down this offer.

The most important thing for us is to keep our integrity to our members.

Alright, I think that's about it.

I want to sincerely thank you for taking a few minutes today to learn about something new.

Look, I'm a technologist. And I *love* tech stocks. *Especially early-stage investments!*

But in three decades, I've never found such a safe, predictable way to make big gains on cheap "penny" IPO stocks.

Billionaires have been made…

And many of the big tech winners of yesteryear… like Bill Gates and Jeff Bezos… are now HEAVILY investing in small biotechs.

This is where the Amazons and Microsofts of tomorrow will be found!

I encourage you to take advantage of this situation while these stocks are still unknown and dirt cheap!

But there might not be much time left…

Penny IPO #2, for example, recently shot up 29%…

In a single day!

Listen…

The time to get in isn't when these small biotechs are plastered on the cover of *The Wall Street Journal.*

It's now.

When there are practically no mentions!

And our closed trades prove the case…

We saw 87%… 106%… 116%… and even a massive 432% gain in just 6 weeks.

Is this your time?

I'm not going to push you and pretend I know what's best for you.

Obviously, I'd love to see your name on my subscriber list tomorrow…

Because I want to see you win big.

There are *at least* a dozen new Penny IPOs I'd love to send you over the next 12 months. And each one could change your life. Much sooner than you think.

But only you can decide…

Either way, I want to thank you again for listening today.
