New Banking Rule Set to Trigger a Boom in this Ticker:

[redacted]

Experts projecting gains as high as 1,530% by the end of 2021!

Breaking News: The Office of the Comptroller of the Currency (OCC), the main bank regulator in the U.S., has just announced a major change to our financial system... one that's set to trigger a massive money shift into this ticker symbol.

"A complete game changer"
— financial industry expert Seamus D.

Teeka Tiwari

Hi, I'm Teeka Tiwari.

And right now I want you to grab a piece of paper and a pen…

Because in just a moment, I'm going to give you the ticker symbol of what I believe will be the hottest investment of 2021.

I'm gonna give it to you… no strings attached.

Experts are already projecting this investment could rise as high as 1,530% by the end of the year.

That's 15 times your money.

Unfortunately, most people will miss out.

As Yahoo Finance wrote recently...

"Retail investors are still mostly sidelined."

I don't want you to be one of those people.

I mean, this is just not fair.

While everyday folks are in the dark, the savviest investors are investing untold amounts of money in this.

That's because the agency that regulates all banks in the U.S. has just announced a major change in this letter I'm holding in my hand.

And it's set to trigger a huge money shift.

Raoul Pal, CEO of the advisory service Global Macro Investor, believes trillions will flow into this ticker.

That's why he already invested 75% of all his liquid assets in it. He said:

"It's a once in a lifetime opportunity we're being given. We get to front-run a wall of money. This is the biggest, best, single bet I've ever seen in my career of every asset I've ever looked at."

Famous hedge fund manager Paul Tudor Jones is also betting big on this ticker.

He already poured $183 million into this opportunity..

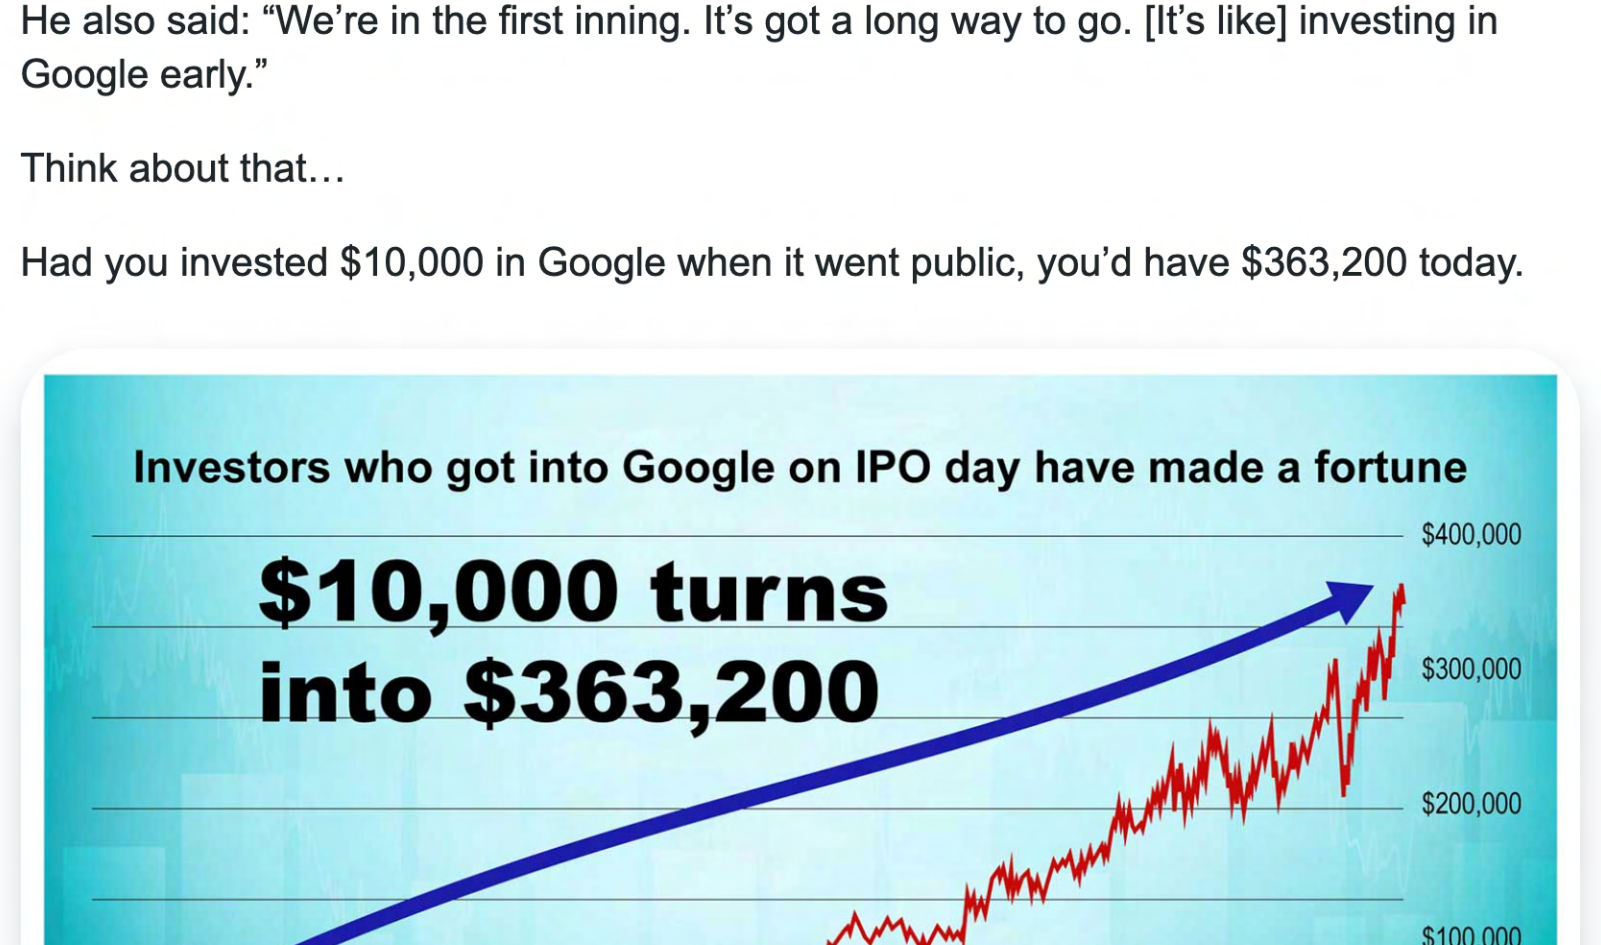
Out of all the investments in his portfolio, he says this "may end up being the best performer of all of them."

Better than all the stocks he already holds, like Google, Amazon, and Apple.

He also said: "We're in the first inning. It's got a long way to go. [It's like] investing in Google early."

Think about that…

Had you invested $10,000 in Google when it went public, you'd have $363,200 today.



And Paul Tudor Jones is not alone.

One River Asset Management has set up a fund that will invest about $1 billion in this one ticker.

How crazy is that?

Hedge fund manager Mike Novogratz has invested at least a whopping $700 million in this market. He said:

"Everyone should put 2% to 3% of their net worth in [this ticker] and look at it in five years. And it's going to be a whole lot more."

Wall Street legend Bill Miller, the founder of investment manager Miller Value Partners, also "strongly" recommends buying this ticker now.

He said:

"I think every major bank, every major investment bank, every major high net worth firm is going to eventually have some exposure."

Or look at another famous billionaire, Stanley Druckenmiller.

He became famous after him and his partner George Soros famously "broke the Bank of England" when they shorted the British pound in 1992…

And walked away with $1 billion in profits.

Recently, he just announced he's also invested in this ticker. It's truly a mad rush right now.

All the big players are getting in.

In fact, institutions like hedge funds, pensions, and endowments are already pouring up to $400 million into this market…

Every single week.

Think about that…

$400 million… every single week.

Do they know something that you don't?

Fidelity also reported that "financial advisors, high net worth individuals and family offices" are getting into this as well.

Even some public companies are now investing in this ticker.

Look at MicroStrategy, a Virginia-based software company that trades on the Nasdaq.

After putting a whopping $250 million in this ticker….

They issued a press release saying this "would provide the prospect of earning a higher return than other investments."

I can't blame them.

I'm personally doing the same with my own money…

You see, I'm a former VP at a major investment bank in the U.S…

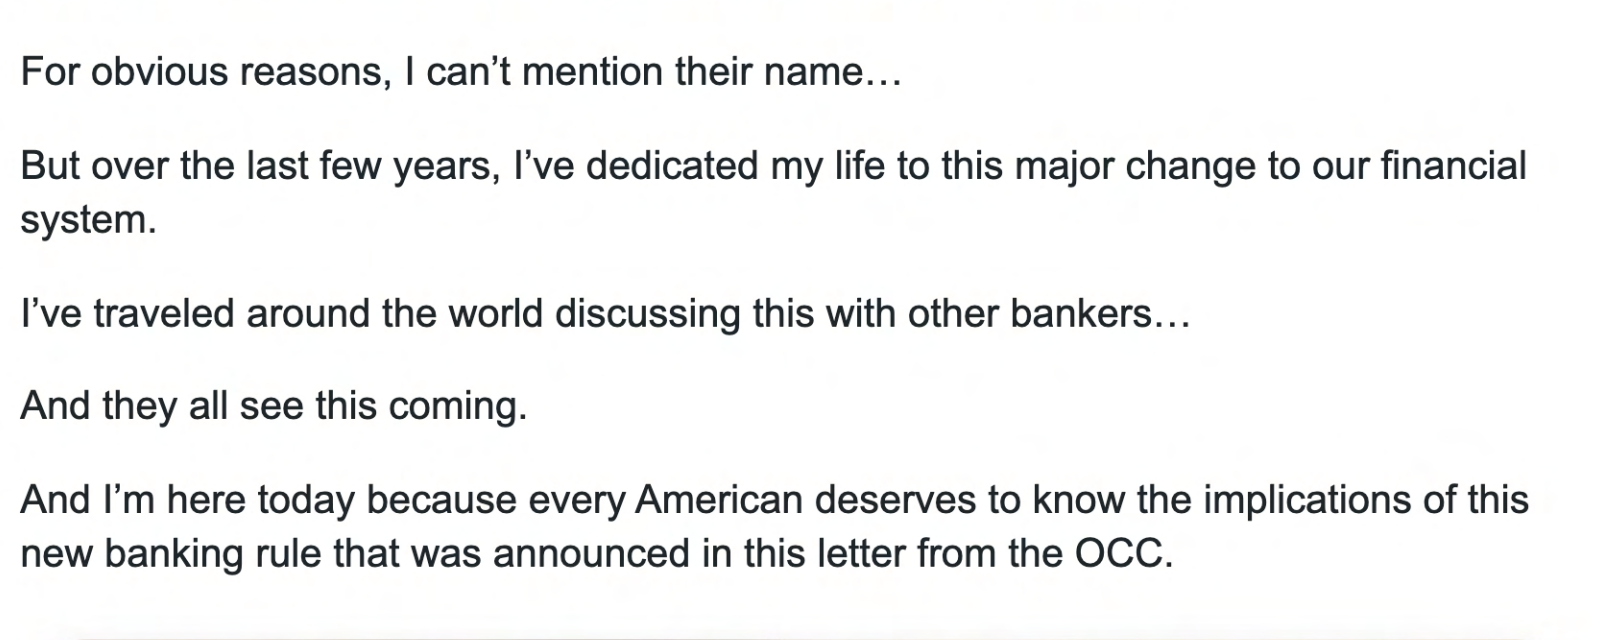
For obvious reasons, I can't mention their name…

But over the last few years, I've dedicated my life to this major change to our financial system.

I've traveled around the world discussing this with other bankers…

And they all see this coming.

And I'm here today because every American deserves to know the implications of this new banking rule that was announced in this letter from the OCC.



Make no mistake… This will trigger a huge money shift.

And it's creating an incredible opportunity for you to come out of this wealthier than ever…

In fact, I took out hundreds of thousands of dollars from my personal bank account…

And put it all in the opportunity I'll reveal here today…

Because I'm 100% confident this will be the hottest investment of 2021.

I'm 100% confident that those who don't get in now will regret it by the end of the year.

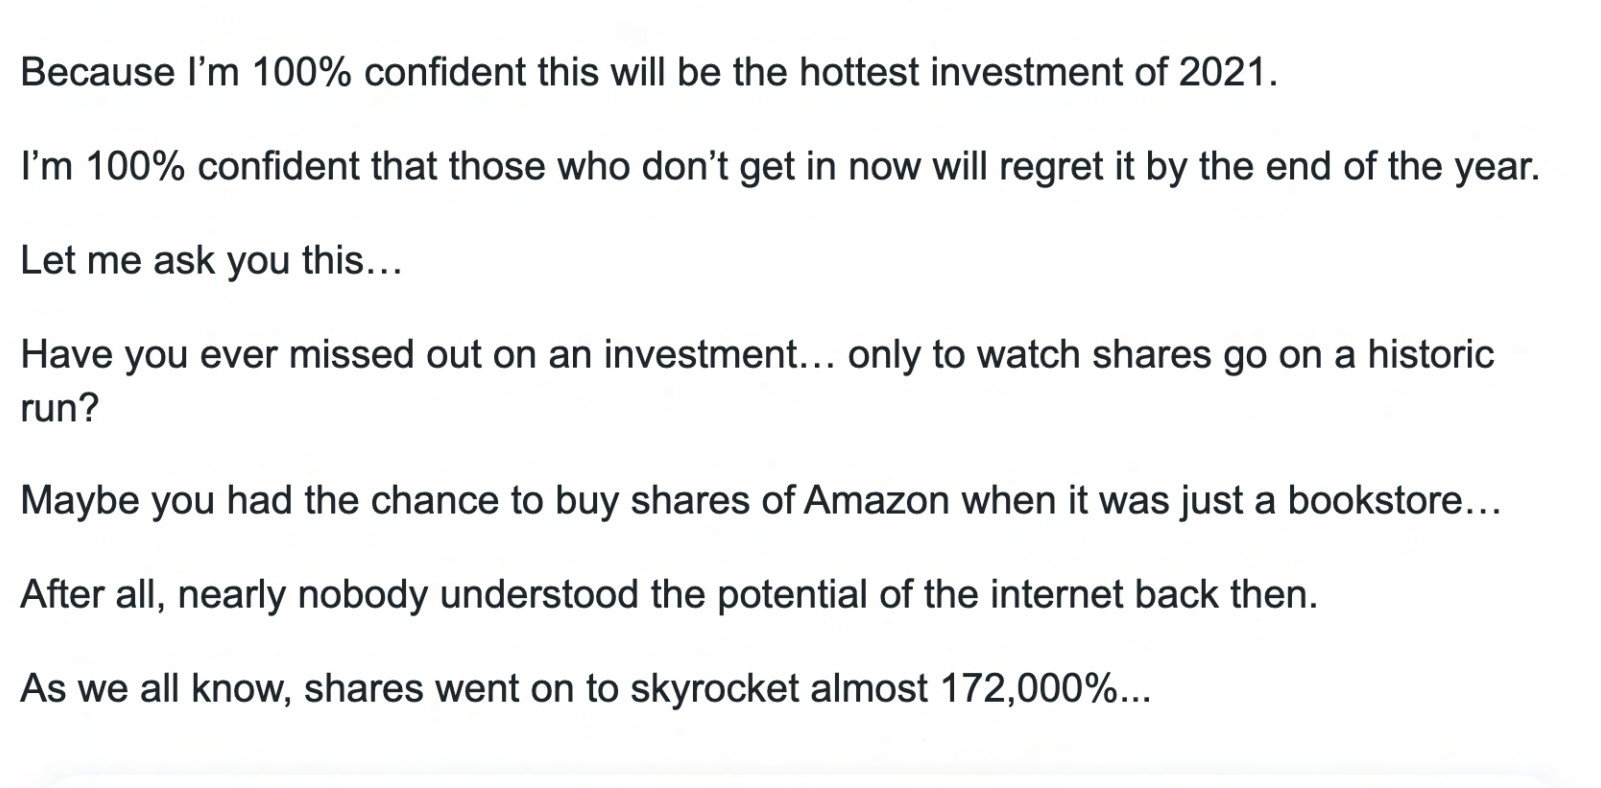
Let me ask you this…

Have you ever missed out on an investment… only to watch shares go on a historic run?

Maybe you had the chance to buy shares of Amazon when it was just a bookstore…

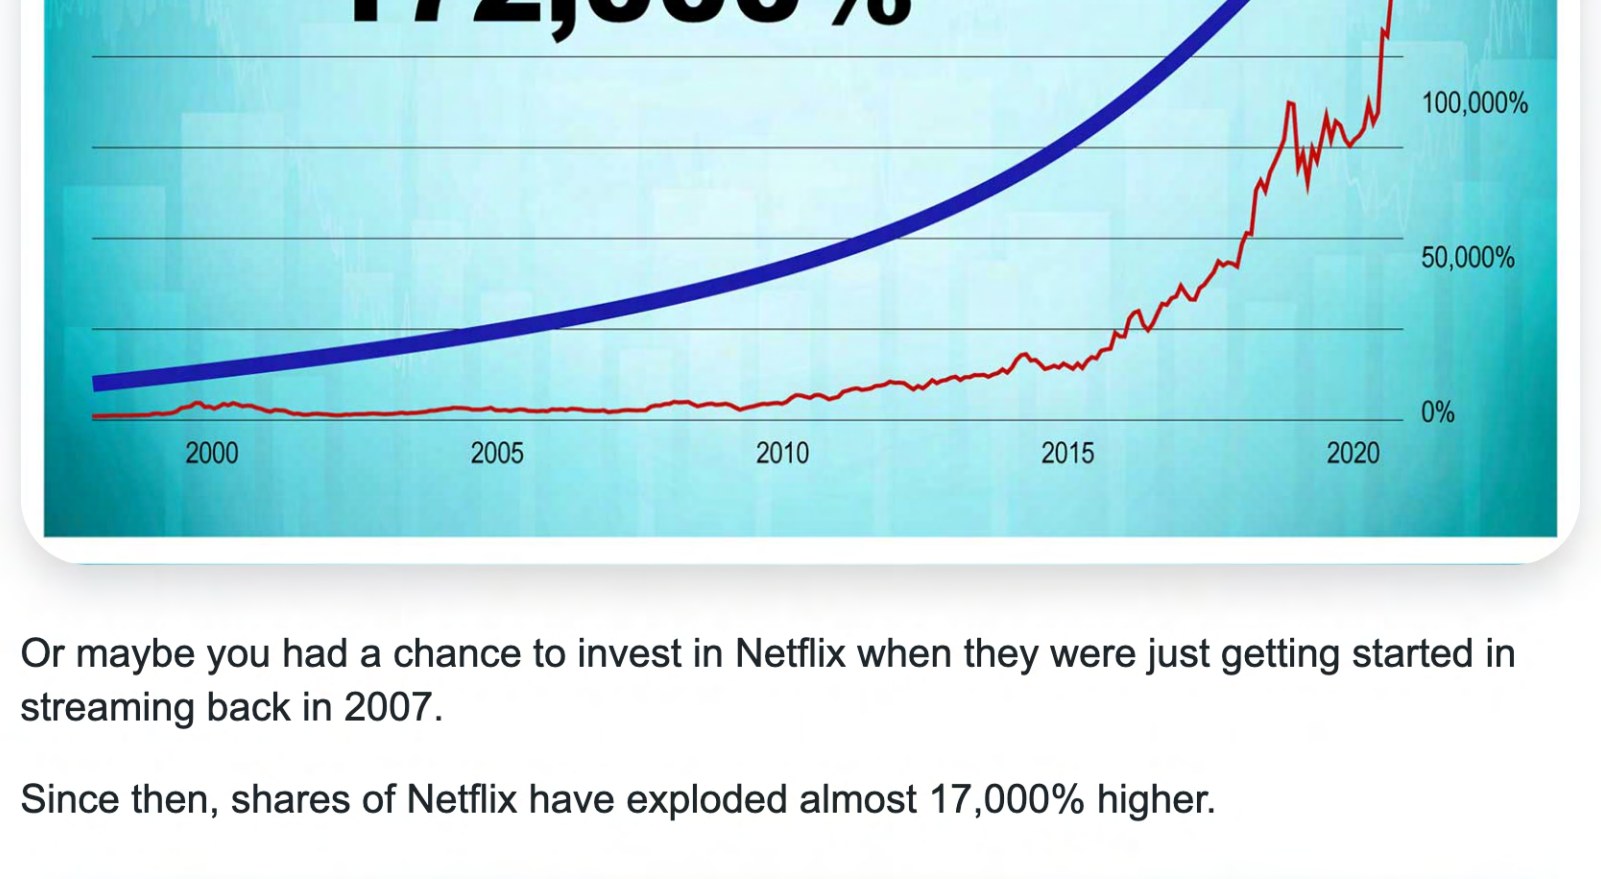
After all, nearly nobody understood the potential of the internet back then.

As we all know, shares went on to skyrocket almost 172,000%...



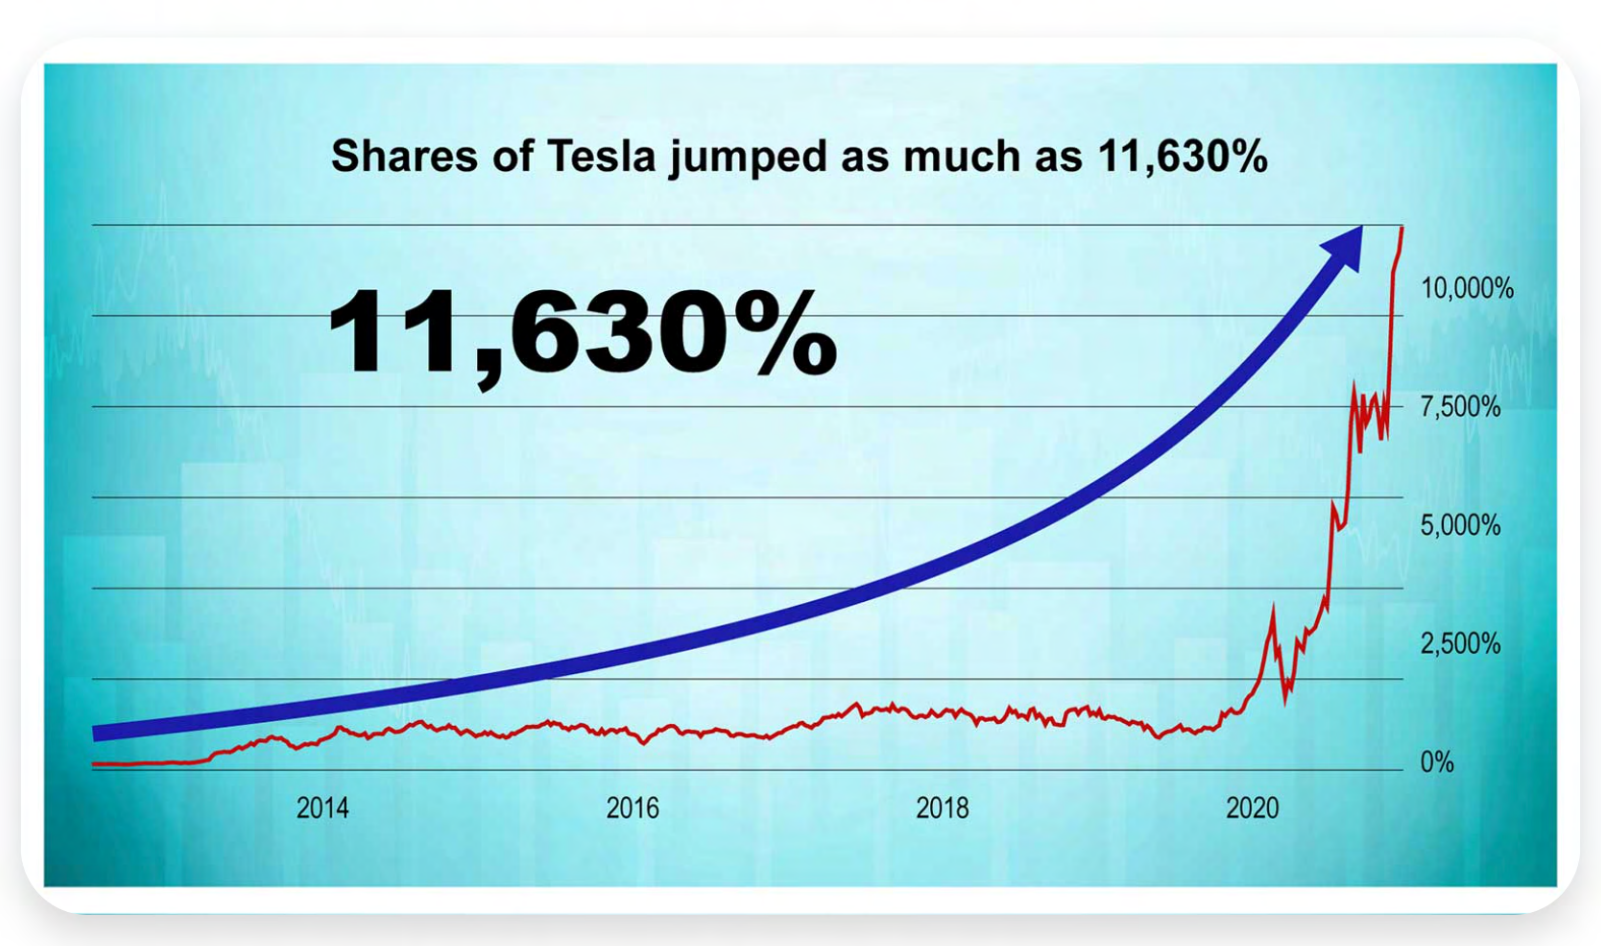
Or maybe you had a chance to invest in Netflix when they were just getting started in streaming back in 2007.

Since then, shares of Netflix have exploded almost 17,000% higher.



Or maybe you missed out on Tesla more recently because all the media could talk about was how the company wasn't profitable.

But as we all know, shares have jumped as much as 11,630%.



I think we've all missed historic opportunities like those.

And if you did, I can't blame you.

There's a lot of misinformation out there.

Which is why I'm here today.

We're facing a historic opportunity right now…

And if you miss this ticker…

And the boom that's going on in this market…

I'm pretty sure by the end of 2021, you'll regret it.

Remember, experts are projecting gains as high as 1,530% by the end of the year.

If these projections are right, that means anyone who invests $5,000 today…

Could cash out at the end of the year with $81,538.

And that's why I want to give you the ticker in just a moment, no strings attached.

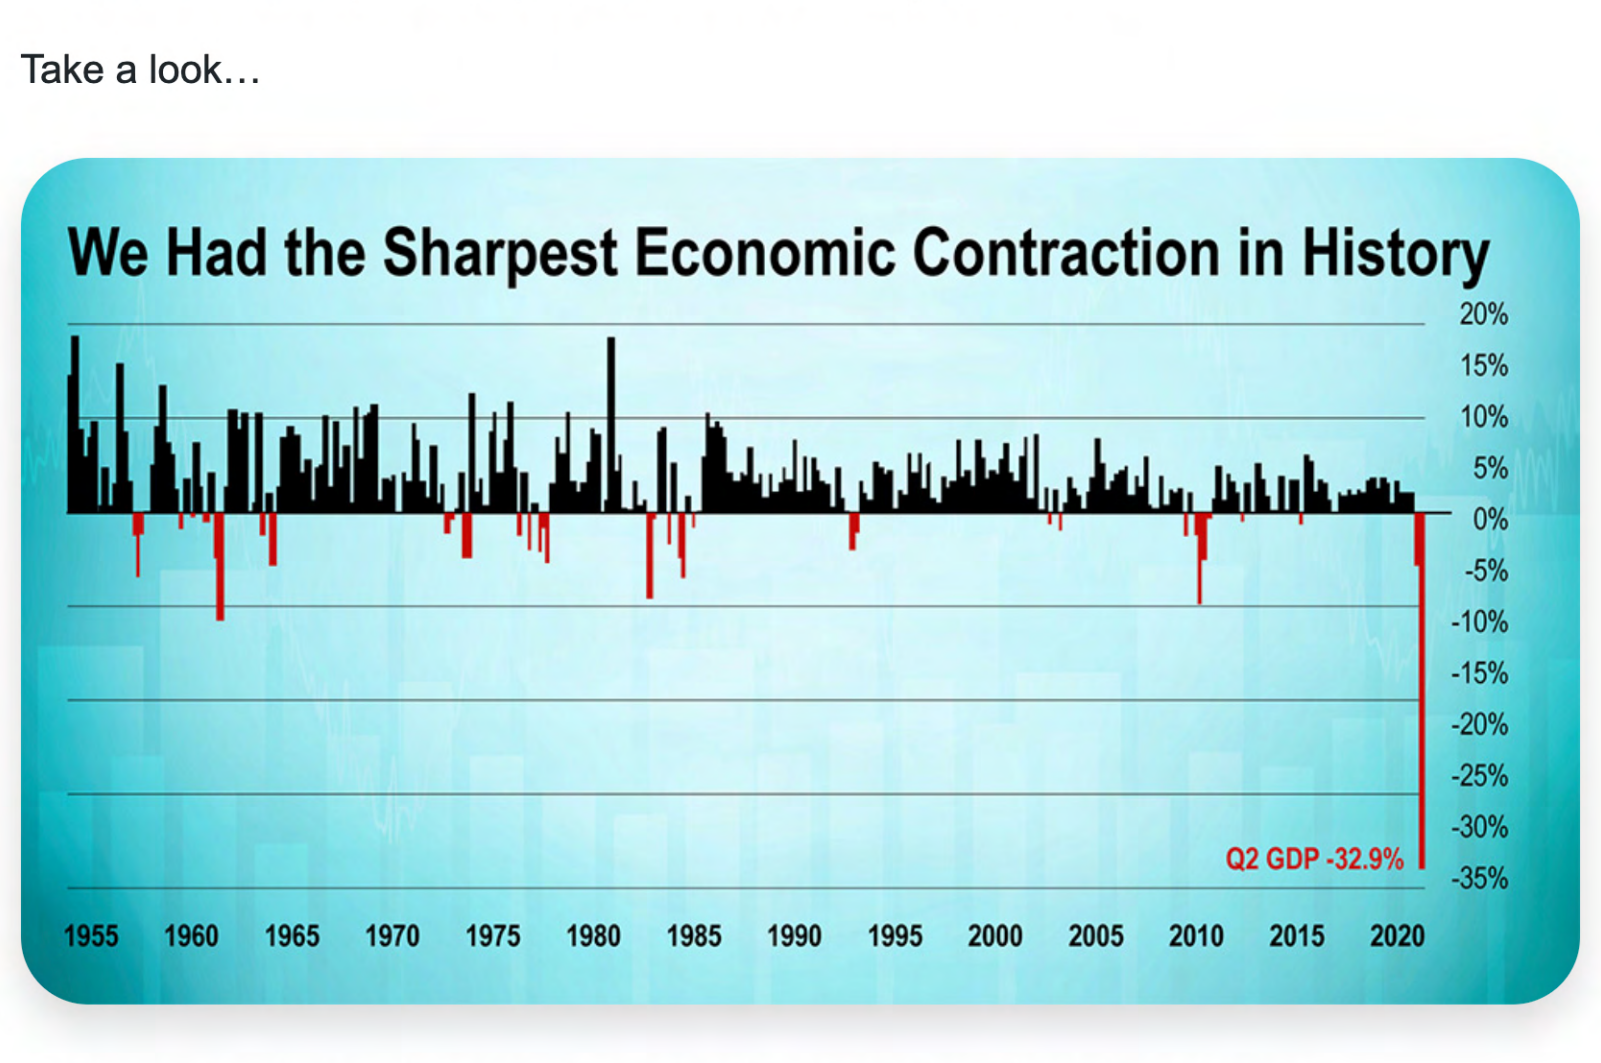
But first, it's important you understand exactly what's creating this massive opportunity.

It all started with the COVID-19 pandemic

As you know, because of social distancing and lockdowns…

Our entire economy basically came to a screeching halt in 2020…

Take a look…



That was the sharpest economic contraction in modern American history.

It was 4 times worse than what we saw in 2008.

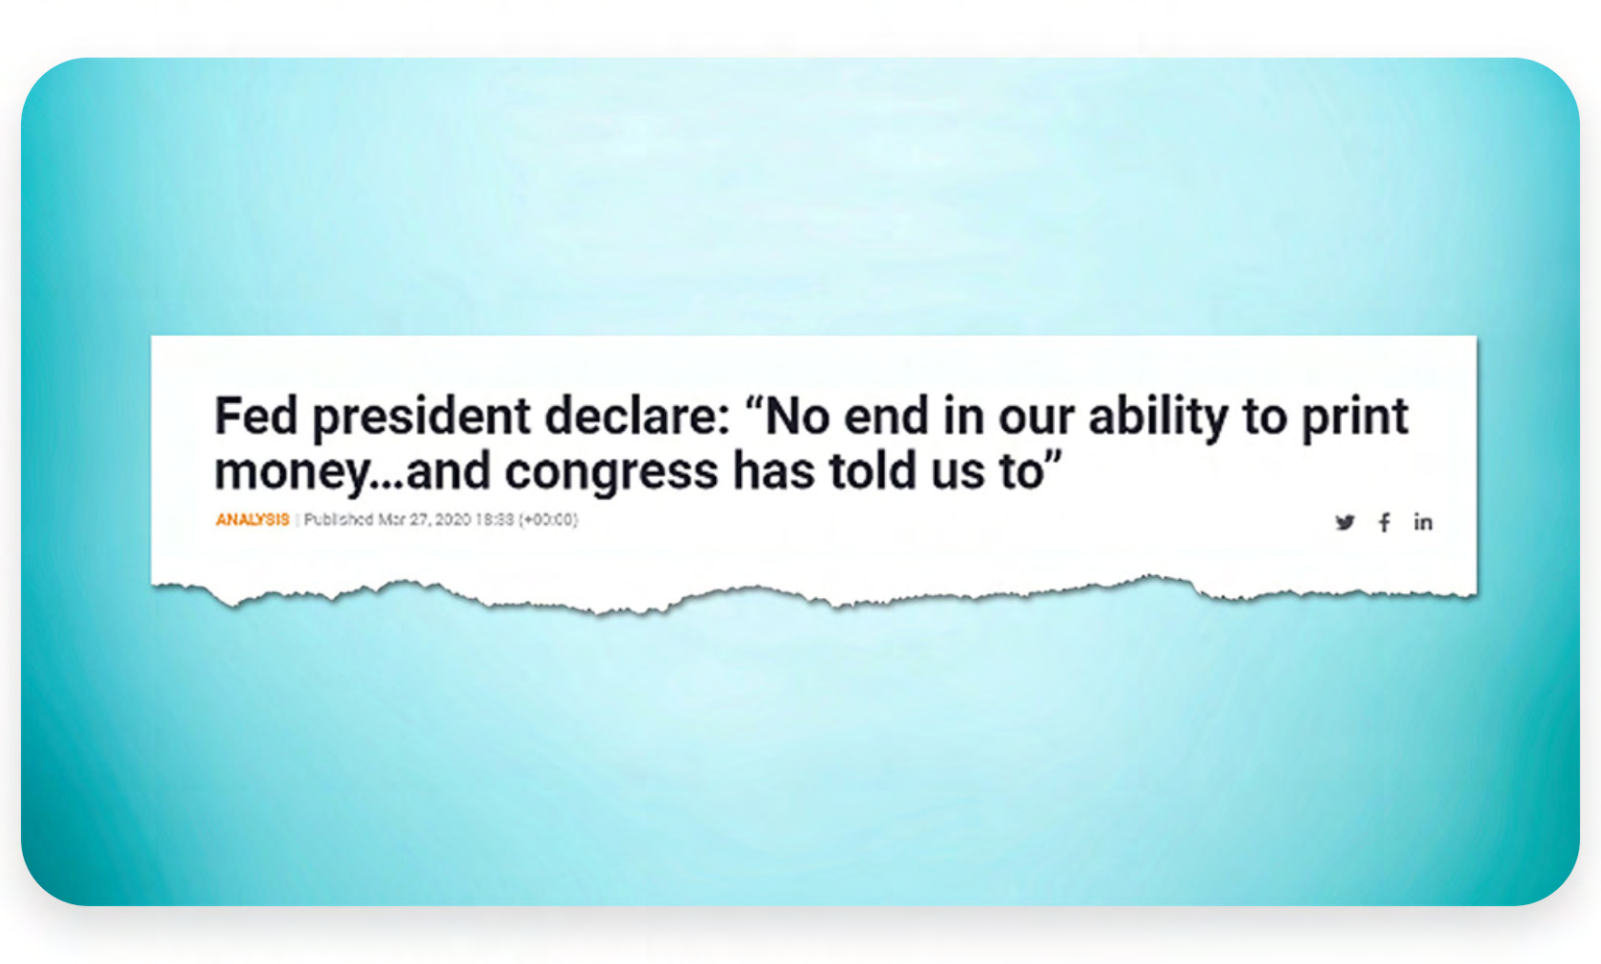
Because of this unprecedented collapse…

The U.S. Federal Reserve, our central bank, felt like they had no choice but to take drastic measures.

They promised to print unlimited amounts of money to stimulate the economy.

As the Fed president said:

"No end in our ability to print money… and Congress has told us to."



Fed president declare: "No end in our ability to print money...and congress has told us to"

ANALYSIS

In just a few months following the COVID outbreak….

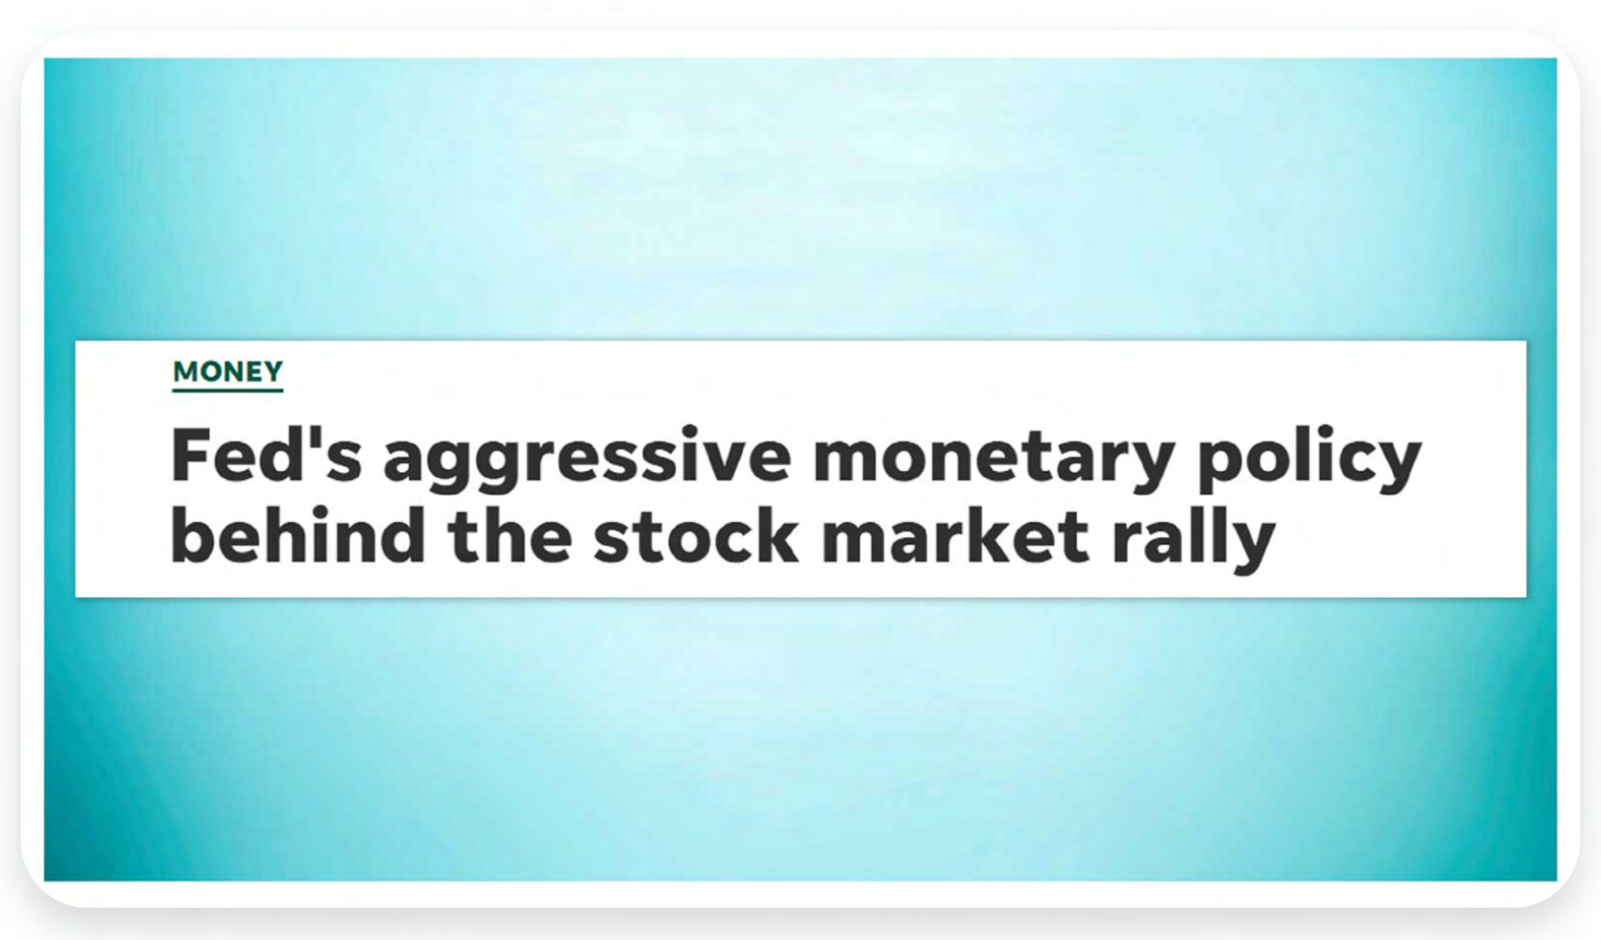
The Fed had already printed a little over $3 trillion.

That's more than the entire size of the U.K. economy, where I grew up.

And they're promising to do more.

Now, it's no secret all this money printing is triggering a boom in the stock market.

This headline from *USA Today* says it all…

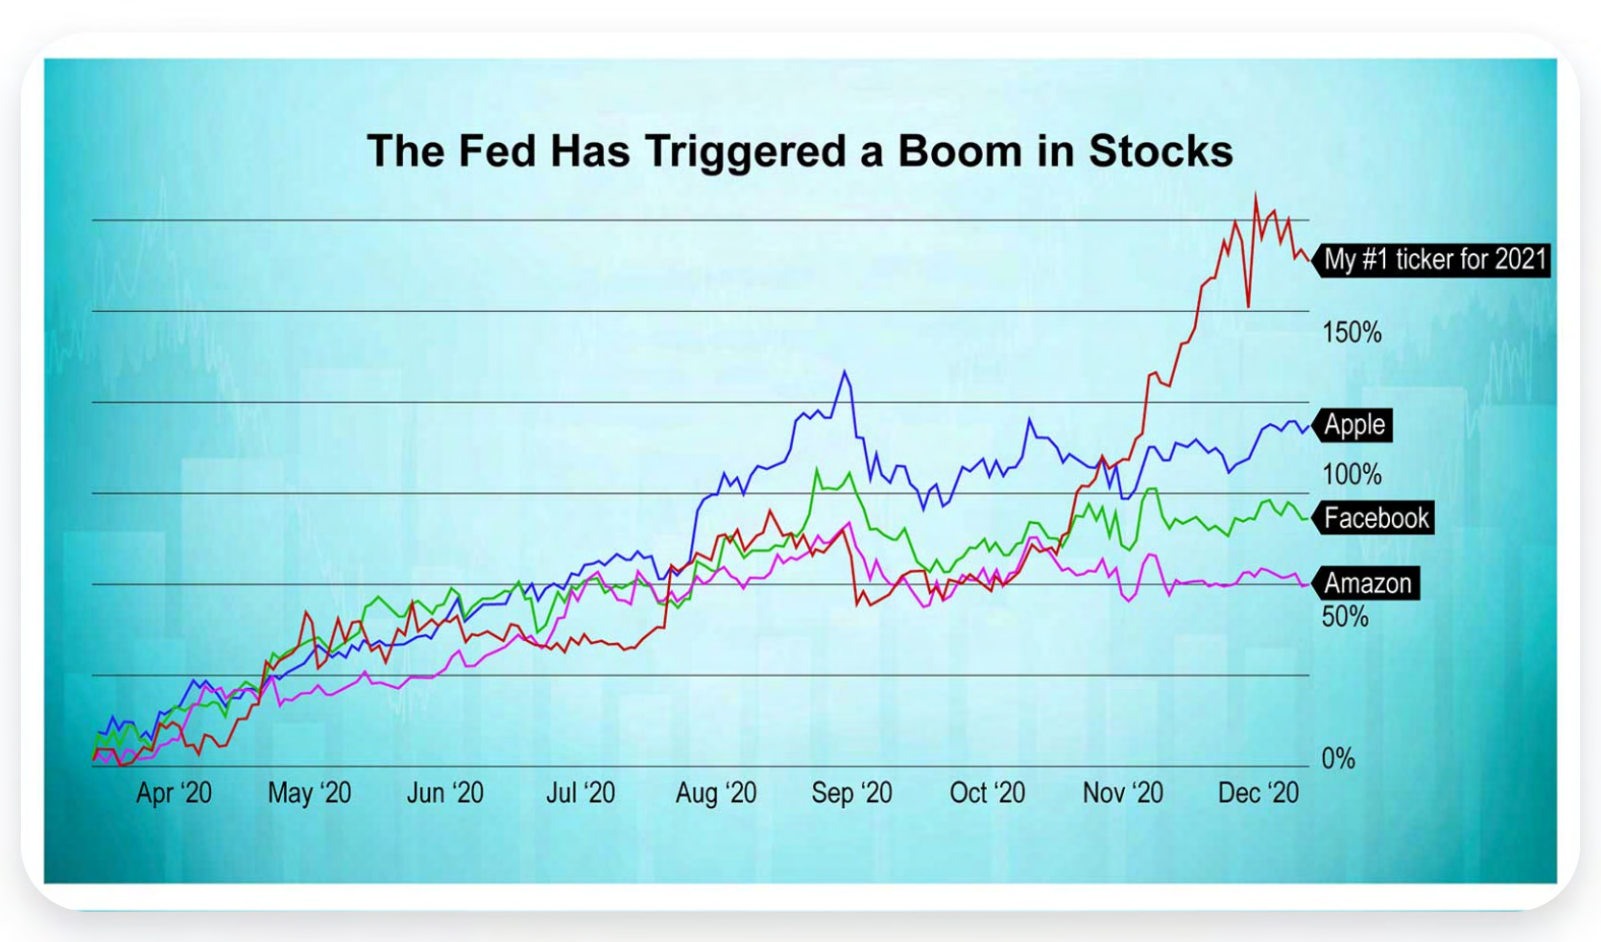


MONEY

Fed's aggressive monetary policy behind the stock market rally

Ever since the Fed announced unlimited money printing, many stocks have gone on a historic rally…

Take a look…



Shares of Amazon jumped 60%...

Facebook 80%...

Shares of Apple more than doubled, which is just insane for a big company to do that in less than a year.

But there was one ticker that beat them all… the one I'll give you in just a moment.

And if you missed out so far…

Don't worry…

Because this is just the beginning of a historic run.

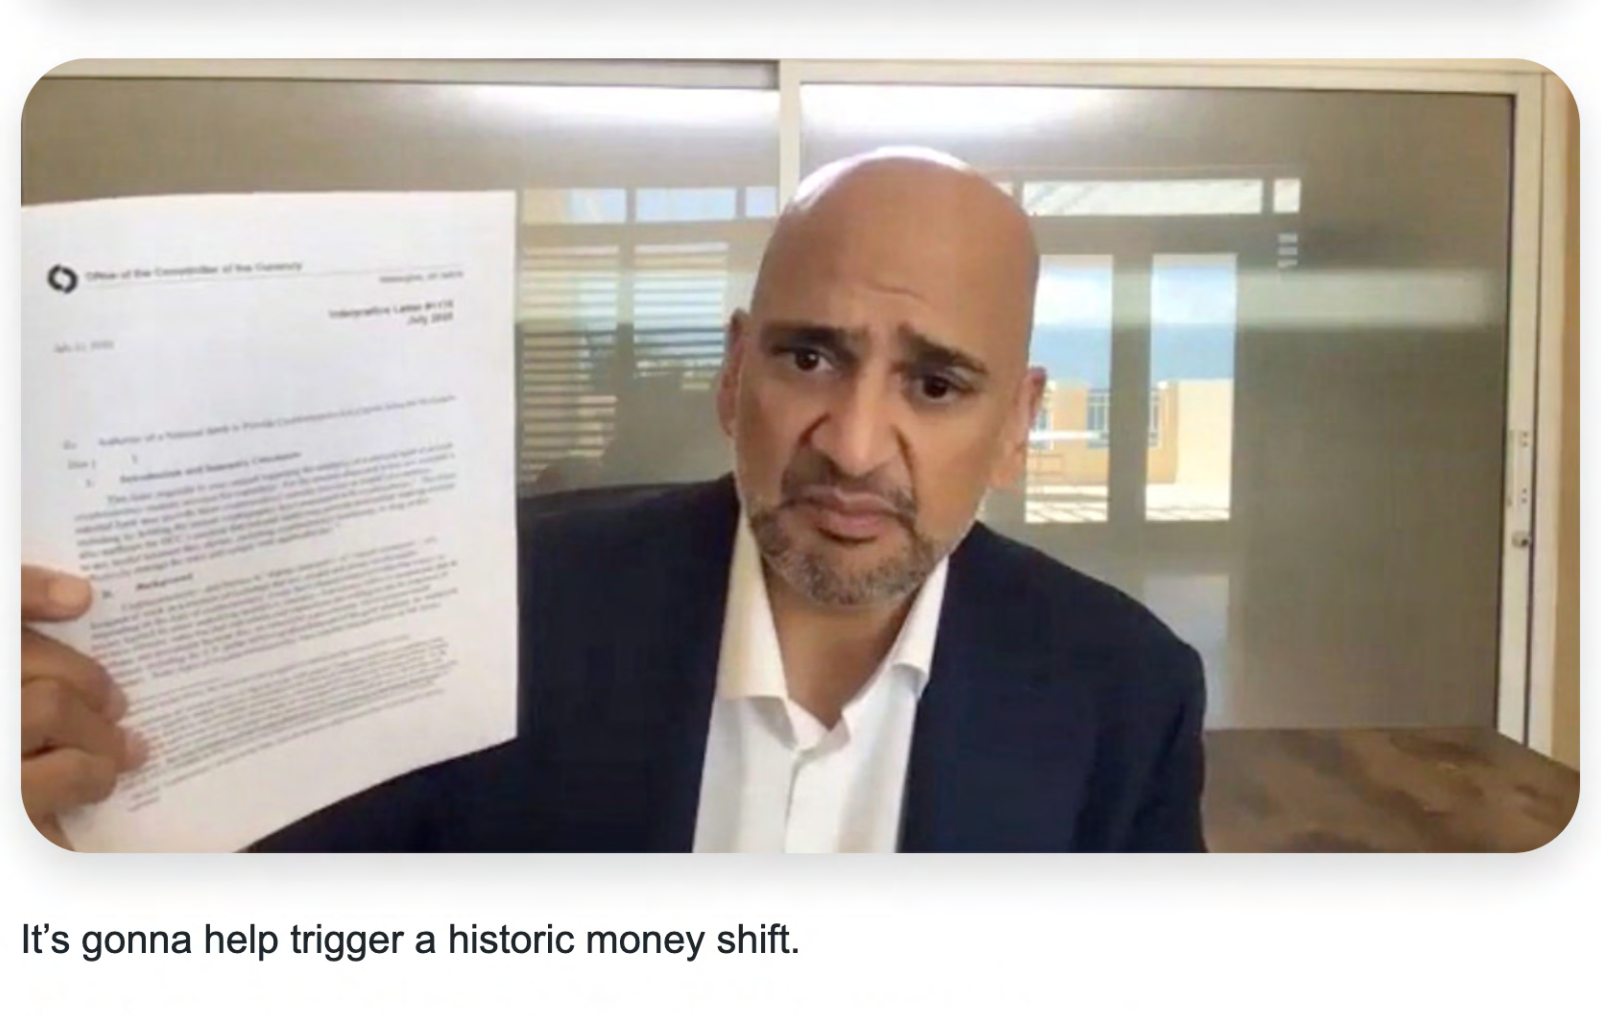
As I'm about to show, some experts are projecting gains as high as 1,530% by the end of the year.

I hope you realize how crazy that is.

Last year the stock market went up around 15%. And it was a great year.

And this ticker is set to go up as much as 1,530% this year… that's more than 100 times better than what the market did last year.

It's all thanks to this letter from the OCC.



It's gonna help trigger a historic money shift.

There's no telling how much money will move into this ticker…

Maybe even trillions of dollars.

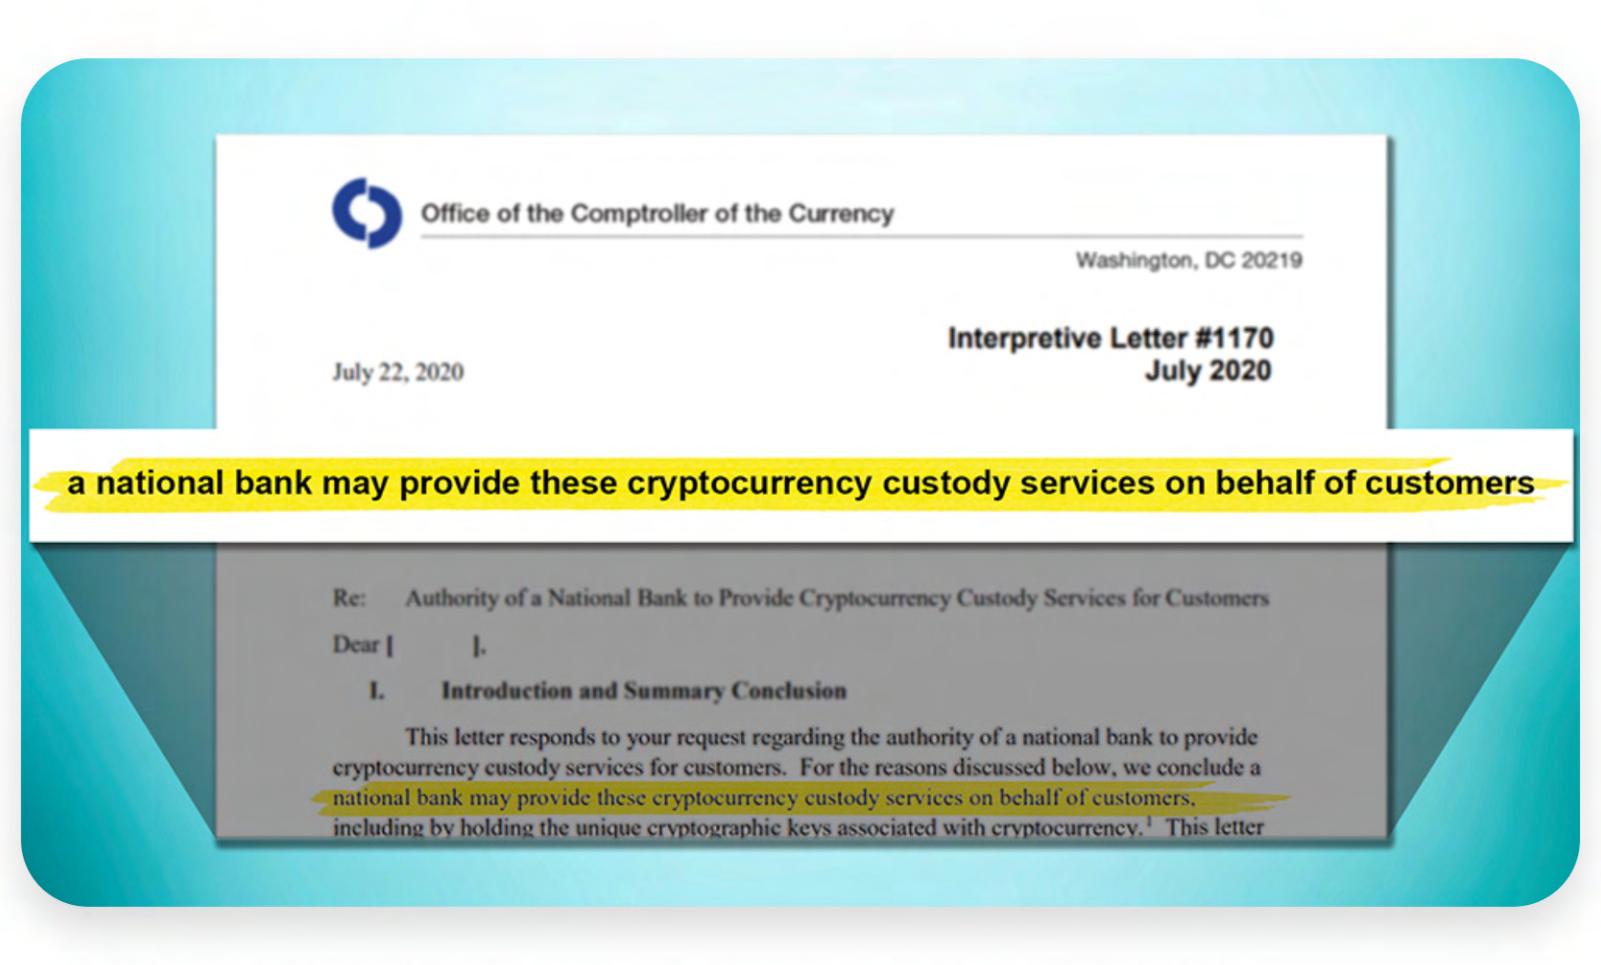
I already shared this ticker with a few folks who follow my work…

And in just a moment, you'll hear one of their incredible stories…

You'll also need to act quickly.

Because we could be just a few days away from a big announcement that could accelerate this entire trend.

There's not much time left.



Office of the Comptroller of the Currency
Washington, DC 20219

Interpretive Letter #1170
July 2020

July 22, 2020

a national bank may provide these cryptocurrency custody services on behalf of customers

Re: Authority of a National Bank to Provide Cryptocurrency Custody Services for Customers

Dear [ ]:

I. Introduction and Summary Conclusion

This letter responds to your request regarding the authority of a national bank to provide cryptocurrency custody services for customers. For the reasons discussed below, we conclude a national bank may provide these cryptocurrency custody services on behalf of customers, including by holding the unique cryptographic keys associated with cryptocurrency.[1] This letter

Remember, the OCC is the agency that regulates all banks in the U.S.

As you can see, their letter says…

"A national bank may provide cryptocurrency custody services on behalf of customers"

That's right…

For the first time ever…

Banks will be able to hold cryptocurrencies as an asset, just like they hold a certificate of deposit.

Think about the implications of this.

Just a few years ago, most people thought cryptos were a scam.

But now…

Pretty much every institution in the U.S. is starting to embrace cryptos as a real asset.

And that's why a lot of money is about to flow into this one ticker I want to give you in just a moment.

First I need to address something important.

I'm sure you've heard of cryptocurrencies like Bitcoin.

And if you're still skeptical, I can't really blame you.

The clueless media has confused Americans in recent years.

For example…

In late 2015, *Financial Times* called Bitcoin a "pyramid scheme."

Around the same time, *The Washington Post* declared "Bitcoin isn't the future of money"…

I even found an article with the headline "Ten reasons why you not should not care about Bitcoin."

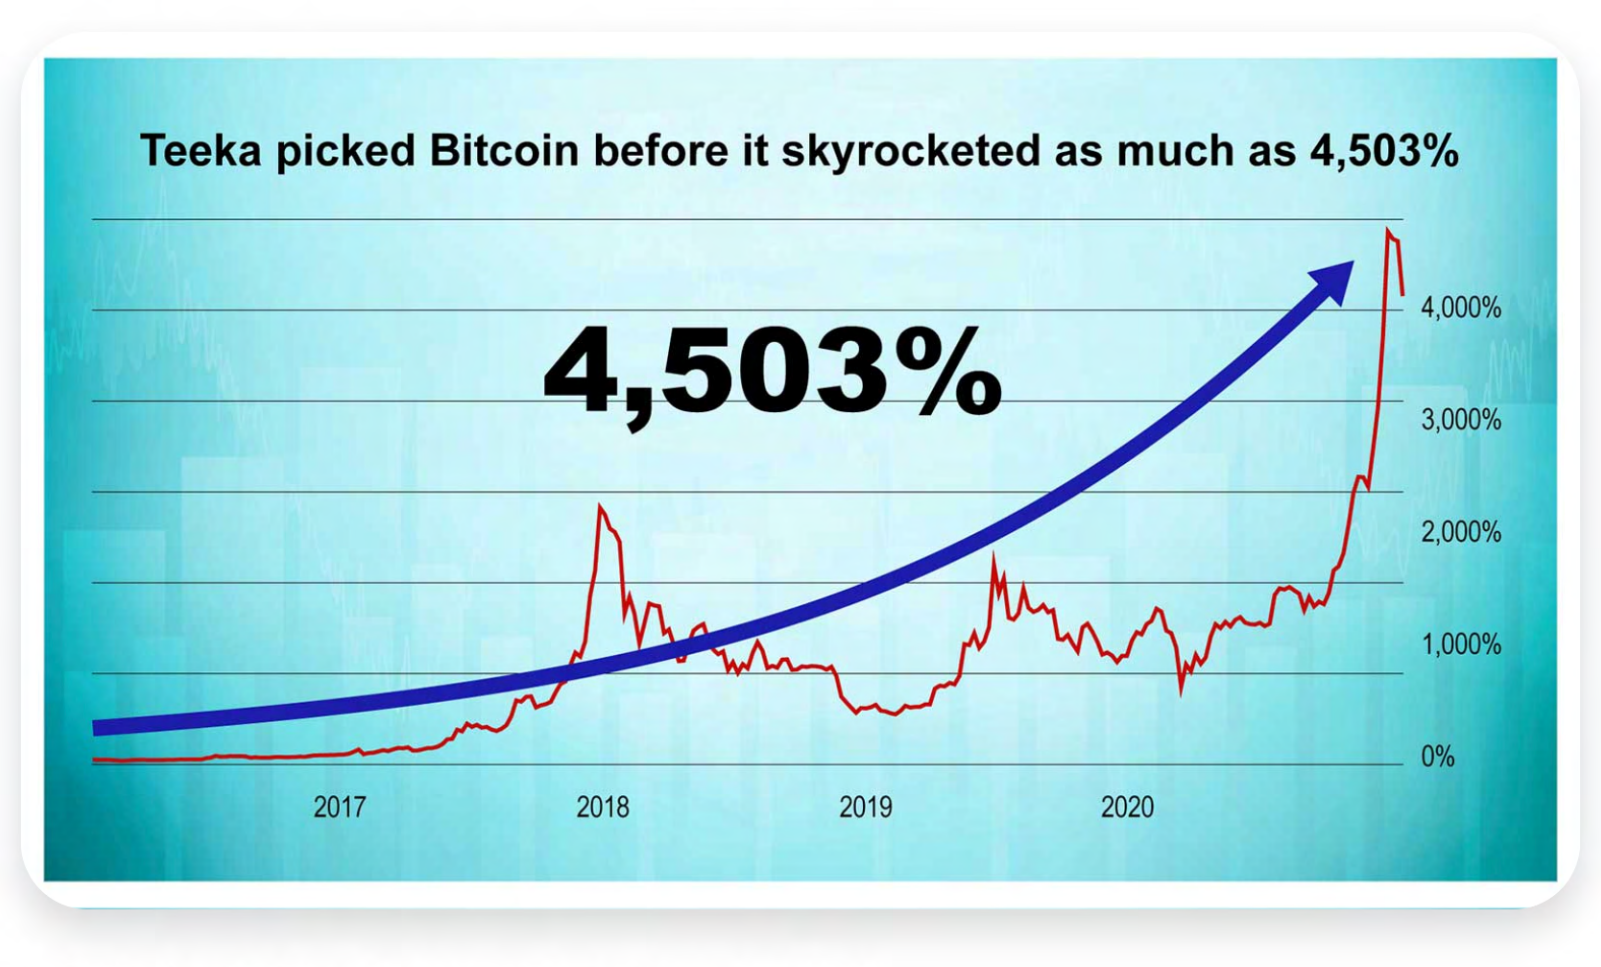
Look, I knew the media was just clueless about digital currencies…

So instead of listening to them…

I recommended Bitcoin when it was trading around $375.

Check this out…

Since then, Bitcoin has exploded as much 4,503%...



And that's with the big correction we saw in 2018.

So yes, it has been a bumpy road… but that's 52 times MORE money than you could

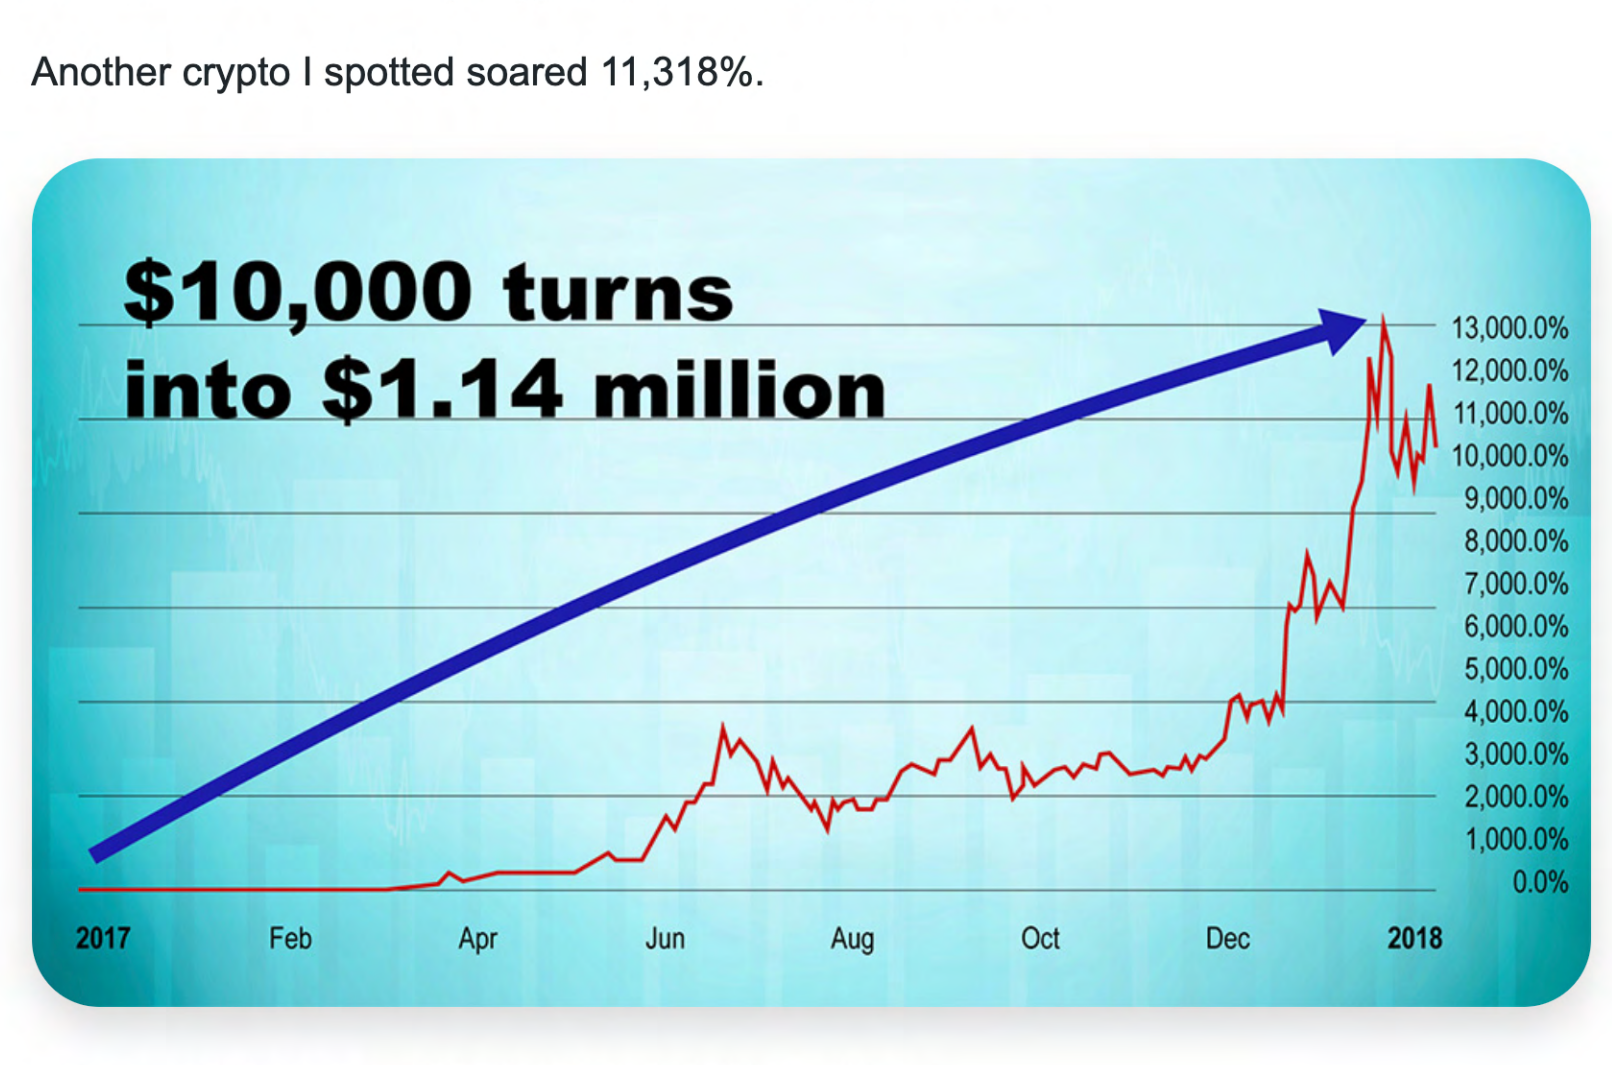
So yes, it has been a bumpy road… but that's 52 times MORE money than you could have made in the stock market.

Had you invested just $10k when I recommended it…

You'd have up to a whopping $460,300 today.

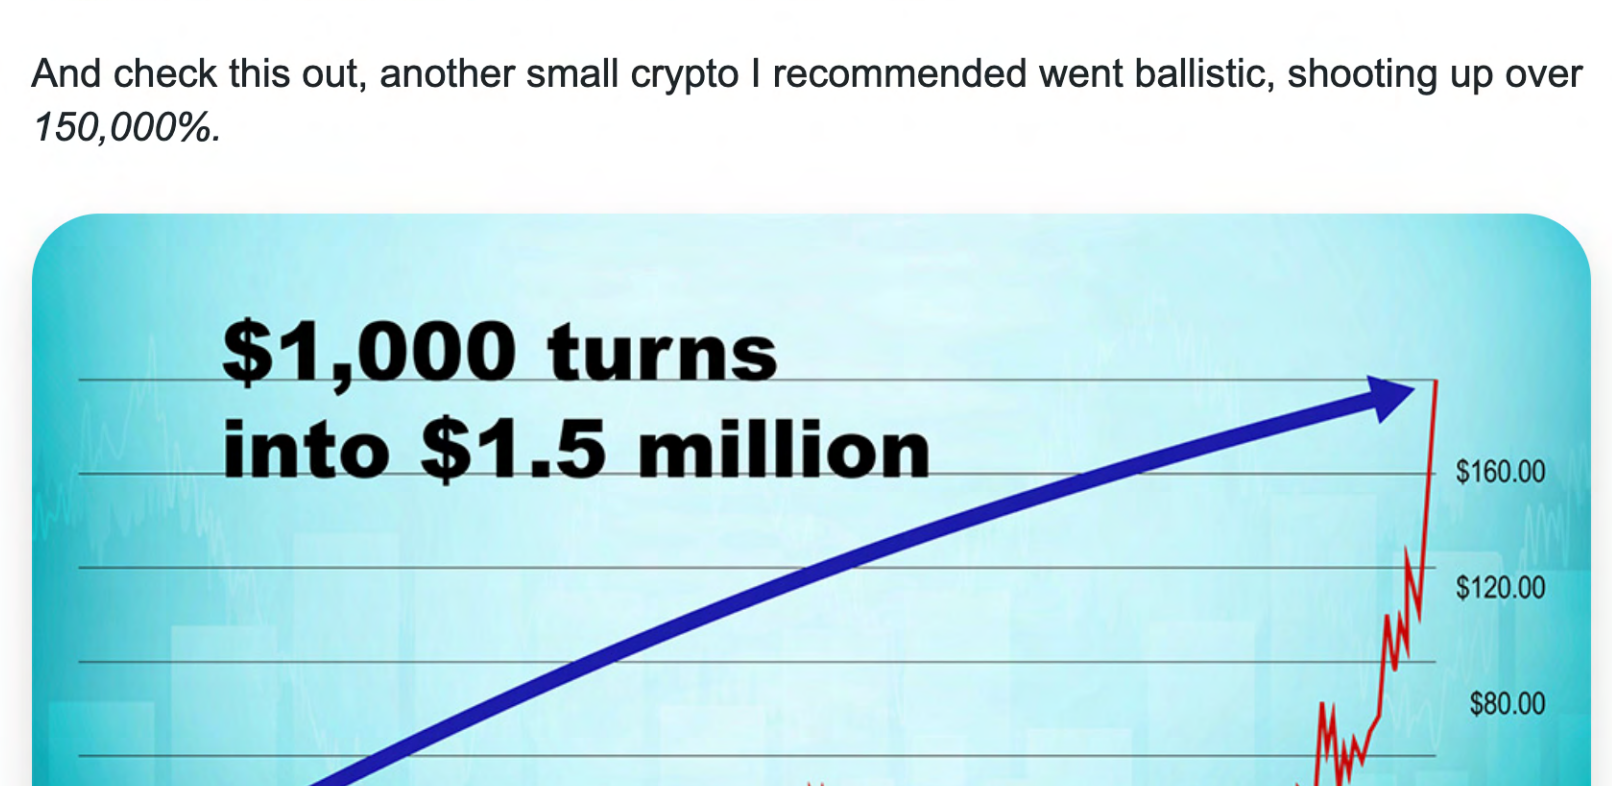
And that wasn't even my biggest gain in the crypto space.

Another crypto I spotted soared 11,318%.



That would have turned $10,000 into $1.14 million.

And check this out, another small crypto I recommended went ballistic, shooting up over *150,000%.*



Enough to turn just $1,000 into more than $1.5 million, which is unheard of.

If all this sounds too good to be true… keep in mind… this actually already happened.

I already personally turned just $1k into as much as $1.6 million.

That's why, in just a moment, I'll show you how you can get into my top 3 small crypto picks for 2021… even if you know nothing about cryptocurrencies.

Last time, several of my readers wrote to tell us how they became millionaires buying those smaller cryptos.

I'll let you hear from one of them in just a moment...

Because you could be the next success story.

I'll also give you the ticker symbol of what I believe will be the #1 investment of 2021, no strings attached.

The truth is… as big as those gains were…

It's nothing compared to what's coming.

We all know from Economics 101 that what drives prices is supply and demand.

If you have declining supply and increasing demand…

***The price is mathematically guaranteed to go higher.

That's a law of economics…

It's as certain as gravity.

And that's exactly the situation we have today with Bitcoin. You see…

The problem with the dollar is there are too many of them.

Like I showed you earlier, we're witnessing a historic experiment with our currency with the Fed printing trillions like never before.

As an expert on the Federal Reserve, Peter Conti-Brown says, "America has never seen anything like it."

Bitcoin has its own problem of course… there aren't enough to go around.

As a digital currency, the supply of Bitcoin is dictated by a computer code.

Each year, by design, fewer and fewer bitcoins are released to the public.

And that should push the price higher.

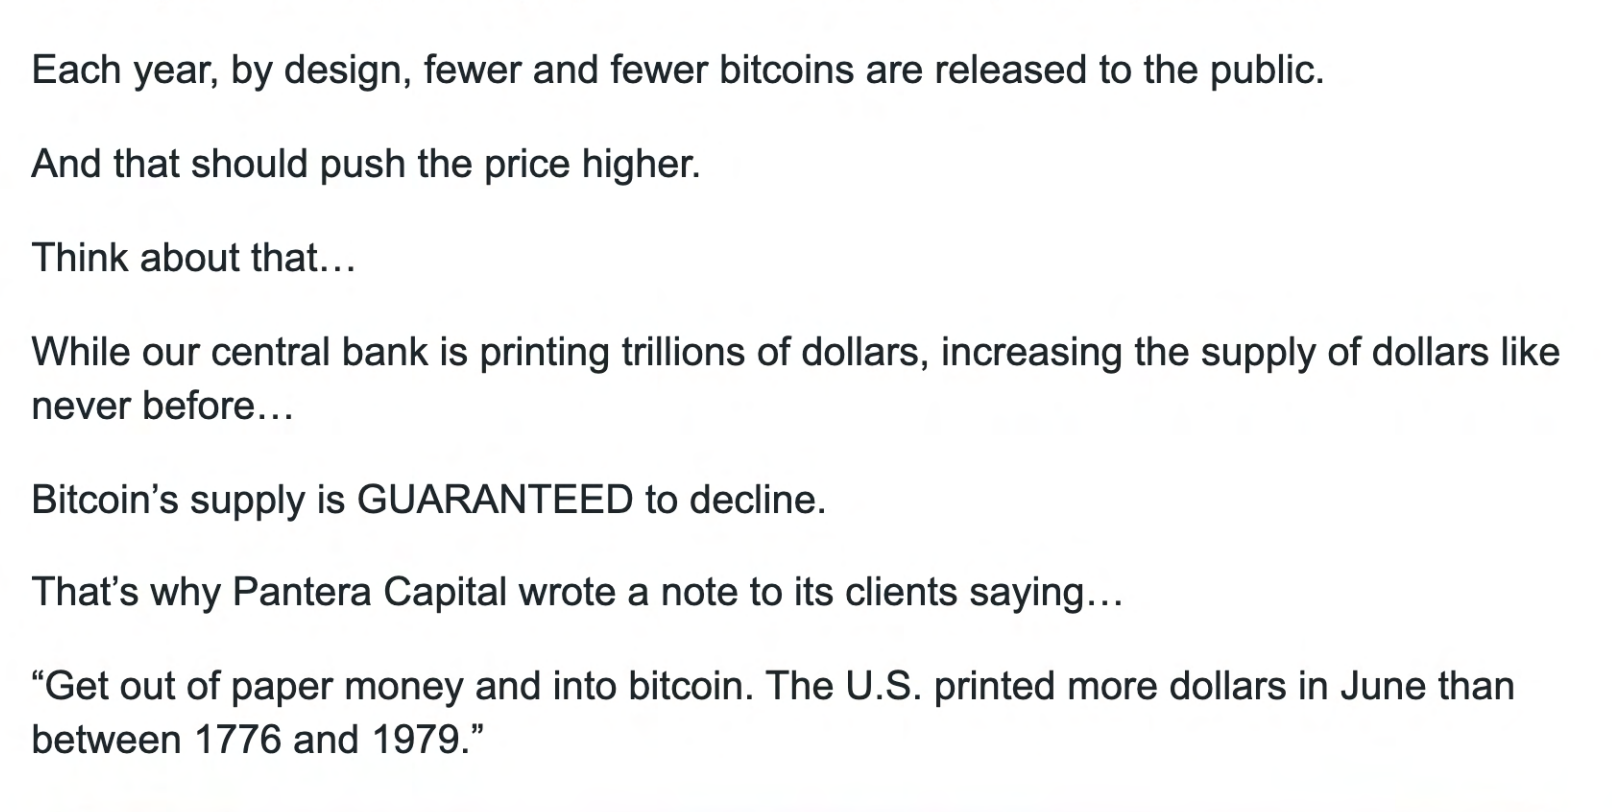
Think about that…

While our central bank is printing trillions of dollars, increasing the supply of dollars like never before…

Bitcoin's supply is GUARANTEED to decline.

That's why Pantera Capital wrote a note to its clients saying…

"Get out of paper money and into bitcoin. The U.S. printed more dollars in June than between 1776 and 1979."



'Get out of paper money and into bitcoin'

In letter to investors, Pantera Capital says US printed more dollars in June than between 1776 and 1979

So how high can Bitcoin go?

I mean, it has already moved up a lot.

Can it really go much higher?

Well, here's the good news…

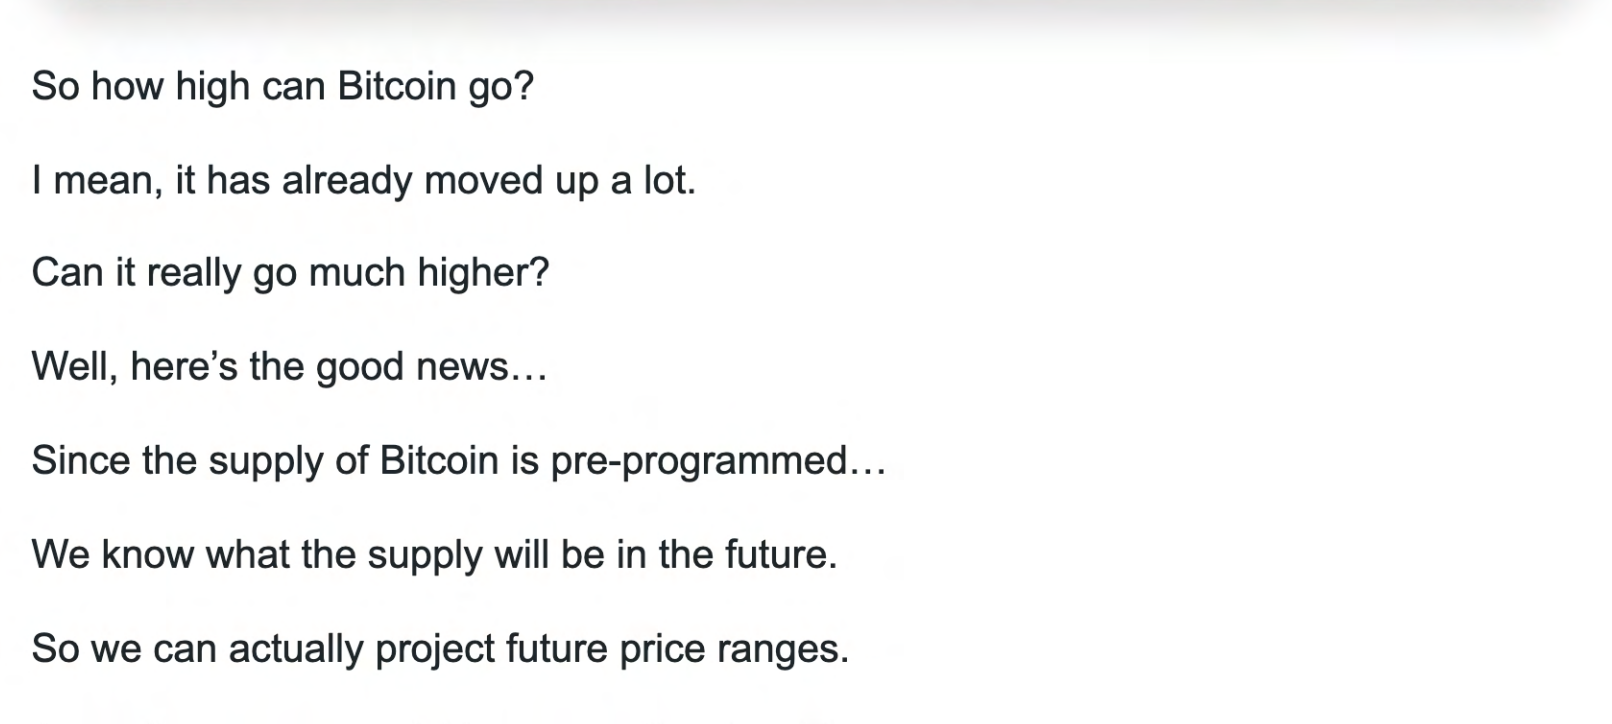
Since the supply of Bitcoin is pre-programmed…

We know what the supply will be in the future.

So we can actually project future price ranges.

According to one model known as Stock-to-Flow…

Bitcoin could hit $100,000 sometime in the coming months and $1 million per token within the next four years. Take a look…



Of course, this is just a projection…

But notice how the model has tracked the actual range of prices for Bitcoin pretty closely.

We're talking about the potential to 5x your money.

It's not just me saying this.

This is based on a model that has been very, very accurate so far.

That's why Yahoo Finance wrote:

"Top hedge funds and money managers are betting the virtual currency could more than quintuple to as high as $100,000 in a year."

And believe it or not…

That's a conservative estimate.

Venture capitalist and billionaire Tim Draper believes the price of Bitcoin will hit $250,000 by the end of 2022.

According to his projection, if you invest $10k right now in Bitcoin…

You could cash out with $131,578 in the next couple of years.

Most Americans don't even have that much saved for retirement.

And it gets even better….

Because maybe you won't have to wait two years to see some big gains.

Some experts are already projecting some huge gains by the end of 2021.

For example, hedge fund manager Brian Estes predicts Bitcoin could end the year as high as $288,000.

That's a 1,416% jump.

Citibank Managing Director Thomas Fitzpatrick thinks it's going even higher.

He predicted that all the money printing could send Bitcoin to $318,000 by December 2021.

That's a 1,530% gain.

So imagine investing $10,000 right now…

And cashing out at the end of the year with more than $163,000!

And still…

That could be just the beginning.

In the long-run, gains could be even bigger.

Former Goldman Sachs fund manager Raoul Pal recently tweeted:

"It's not stocks, not bonds, not commodities, not precious metals, not miners. Only one asset massively outperformed over almost any time horizon: Bitcoin."

And he said the devaluation of the world's currencies will cause the price of Bitcoin to rise 50x to 100x in the next five years.

If he's right, it means you could invest $10,000 today…

And cash out with anywhere from $500,000 and $1 million in five years.

Look, I know all these numbers sound crazy…

And most people won't believe it.

I know that because last time I recommended cryptos, most people didn't believe me either.

But the few who did, had the chance to become millionaires.

They reported they got rich by buying smaller cryptos that were trading for pocket change….

The same type of cryptos I'm going to tell you about in just a minute.

I'm also going to give you the ticker I believe will be the top investment of 2021.

But you better act fast because institutional investors are buying everything they can…

You see, I just explained to you the supply side of the equation.

But there's also the demand side…

And that's picking up like we've never seen before.

I know this because I've met with all the big players in the space…

Including Vitalik Buterin, the creator of Ethereum, one of the most popular cryptocurrencies.

I met with one of the richest men in crypto in Toronto.

I also met privately with an executive in one of Asia's billion dollar crypto exchanges….

And with a Silicon Valley legend, the venture capitalist behind both PayPal and SpaceX.

And they all see mass adoption of crypto assets coming.

And right now, 35–50 million people own crypto.

That's 0.6% of the world's population.

So we're still in the early stages of adoption.

We'll see hundreds of millions (and possibly billions) of people flood into this space in the coming months and years.

Let me just show you how quickly things are changing…

Back in 2016, some people reported getting their bank accounts closed for buying crypto.

In 2018, there wasn't a bank in all of Puerto Rico that would let me open an account because I was writing about crypto.

Today, every major institution that matters has already embraced Bitcoin, even the ones that thought Bitcoin was just a scam.

Take JP Morgan, for example.

Just a couple of years ago, its CEO, Jamie Dimon, called Bitcoin "a fraud."

Now, his bank has accepted two Bitcoin exchanges, Coinbase and Gemini, as clients.

Their research team is advising their clients to add cryptocurrencies to their portfolios.

And they even launched their own digital currency called the JPM Coin.

The truth is…

After many years of resisting, institutions are finally accepting crypto as just another asset class…

Worthy of being held alongside stocks and bonds.

I already showed you how big institutions like hedge funds, pensions, and endowments are already pouring up to $400 million into cryptos…

Every single week.

That's why Forbes wrote…

"Institutional adoption of bitcoin is here"

This is going on across the entire financial industry.

For example, look at Square, a financial services and mobile payments company based in San Francisco.

They allow individuals and merchants to accept offline debit and credit card payments on their smart devices.

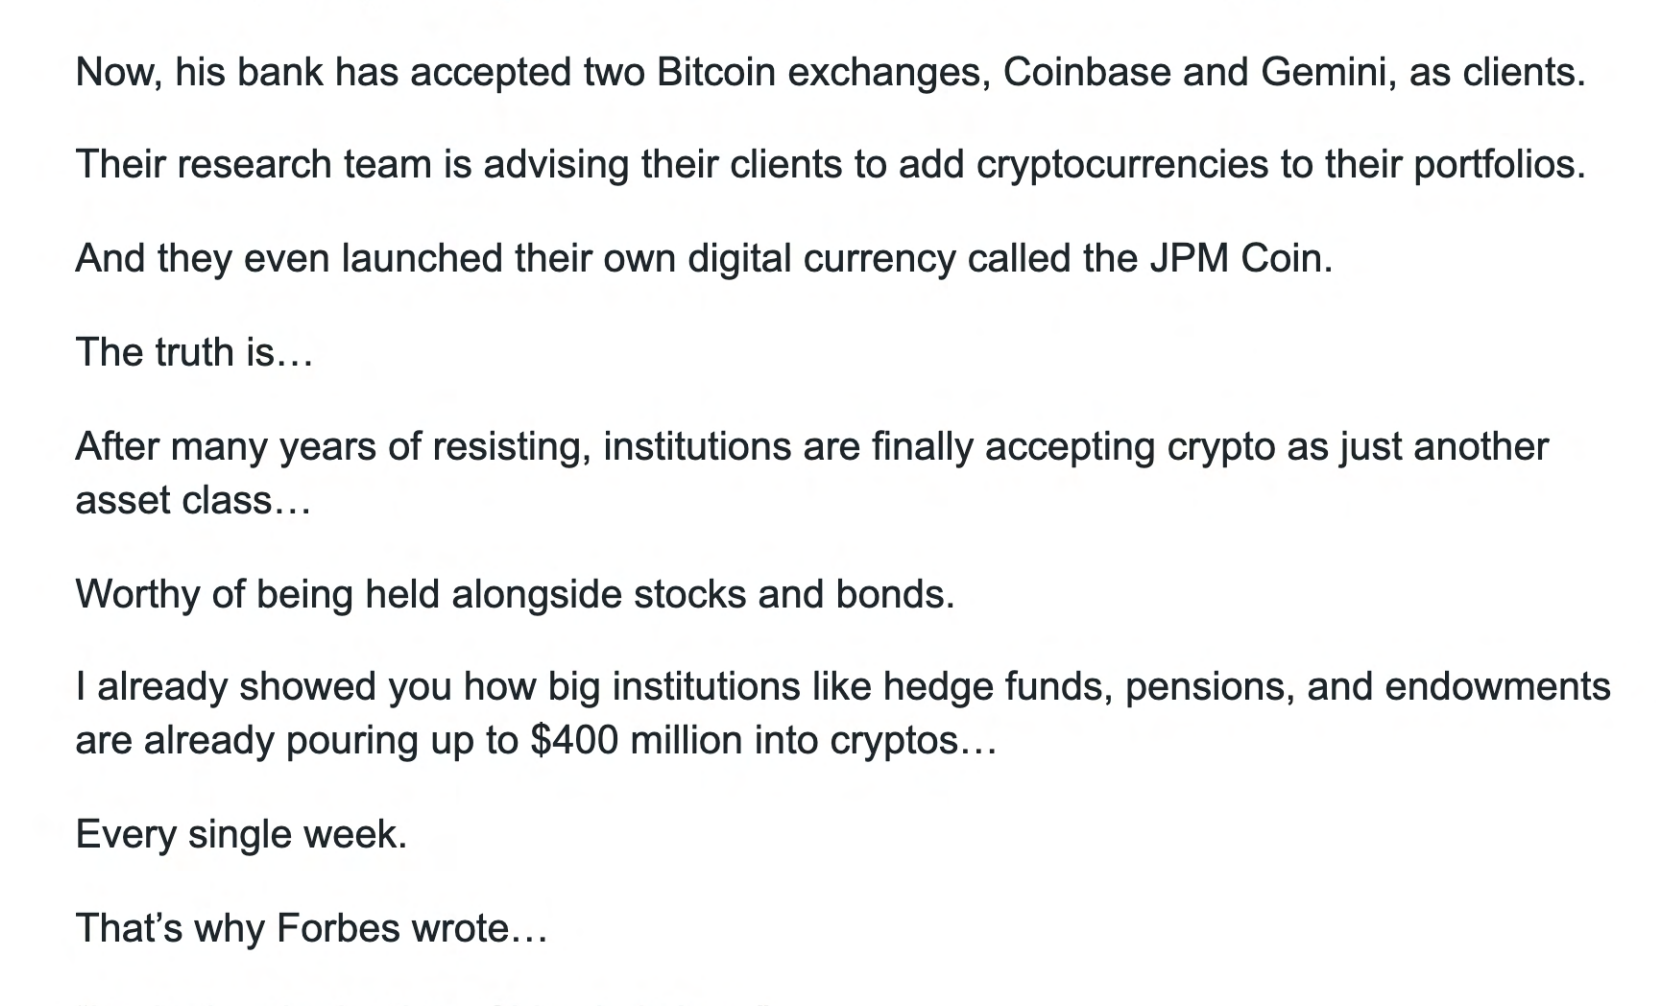
Maybe you've seen their tiny square-shaped phone plug-in.

Today, more than 64 million businesses around the world rely on Square's cashless system. And they're embracing Bitcoin.

In its latest earnings report, Square's Cash App reported $875 million in Bitcoin revenue – a 600% increase from the previous year.

And PayPal just joined them. It rolled out crypto trading to its 325 million users.

Check out this headline from *Barron's*…



BARRON'S

Topics Magazine Data Advisor Penta

CRYPTOCURRENCIES

Bitcoin Goes Mainstream as PayPal and Square Embrace Digital Currencies

The article went on to say…

"Fintech giants PayPal Holdings and Square are adding legitimacy to the once-shadowy world of crypto payments. Both now offer users the ability to buy and sell cryptocurrency and potentially even transact with them at stores."

Visa just announced a credit card that offers rewards in Bitcoin.

And look at Fidelity, the largest provider of 401(k) retirement plan services.

They recently launched their first Bitcoin fund. They released a statement saying:

"Fidelity has made a long-term commitment to the future of blockchain technology and to making digitally-native assets, such as Bitcoin, more accessible to investors."

Think about that…

Fidelity has over $7 trillion in assets under management.

Imagine what that will do to Bitcoin if some of that money starts moving into crypto?

It doesn't get more mainstream than that.

This new OCC rule will just accelerate that process and open the floodgates.

You see, the bylaws of many big investment funds don't allow them to park money outside federally chartered banks.

For years, this has been a de facto ban on cryptocurrency.

This new OCC rule changes all of that.

As *Fortune* said:

"The upshot is that big banks now have a green light to open crypto operations."

That means we could see billions and billions of dollars flowing into the crypto space.

As Yahoo Finance says:

"This is a huge step towards the mass adoption of cryptocurrencies as it potentially opens the asset class up to millions of people in North America."

Banking expert Seamus Donoghue said…

This move from the OCC "is another huge step towards mainstream institutionalization and retail access to cryptocurrencies."

What do you think is going to happen when all this new money starts to flow into Bitcoin and these smaller cryptocurrencies?

You don't have to be a genius to figure this out.

The U.S. banking system alone holds north of $20 trillion in assets.

If bank customers allocate just 1% of their accounts to Bitcoin… Bitcoin's market cap would double.

That's why cryptocurrency research firm Messari wrote recently:

"It won't take much of an institutional allocation until $50,000 bitcoin is back on the table."

Here's another way of looking at it…

If global investors reallocated just 5% of their financial assets to Bitcoin that would be $14.7 trillion in increased demand.

That alone is enough to push Bitcoin 125 times higher.

Think about that…

That's enough to turn a small investment of $5,000 into a whopping $625,000.

With institutional investors already pouring up to $400 million into crypto every week, there's no time to waste.

It's truly a once-in-a-lifetime opportunity.

Once it's gone, it's gone forever.

So how can you get started?

Well, I recommend you take 3 steps right now…

Step #1: Buy Bitcoin before March 17th

At the beginning of this presentation, I told you that billionaires are flocking into one ticker.

If you haven't figured out by now…

The ticker is BTC, for Bitcoin.

Experts are projecting gains as high as 1,530% by the end of 2021.

But the longer you wait, the more money you're leaving on the table.

In fact, the Federal Reserve is scheduled to make an announcement on March 17th

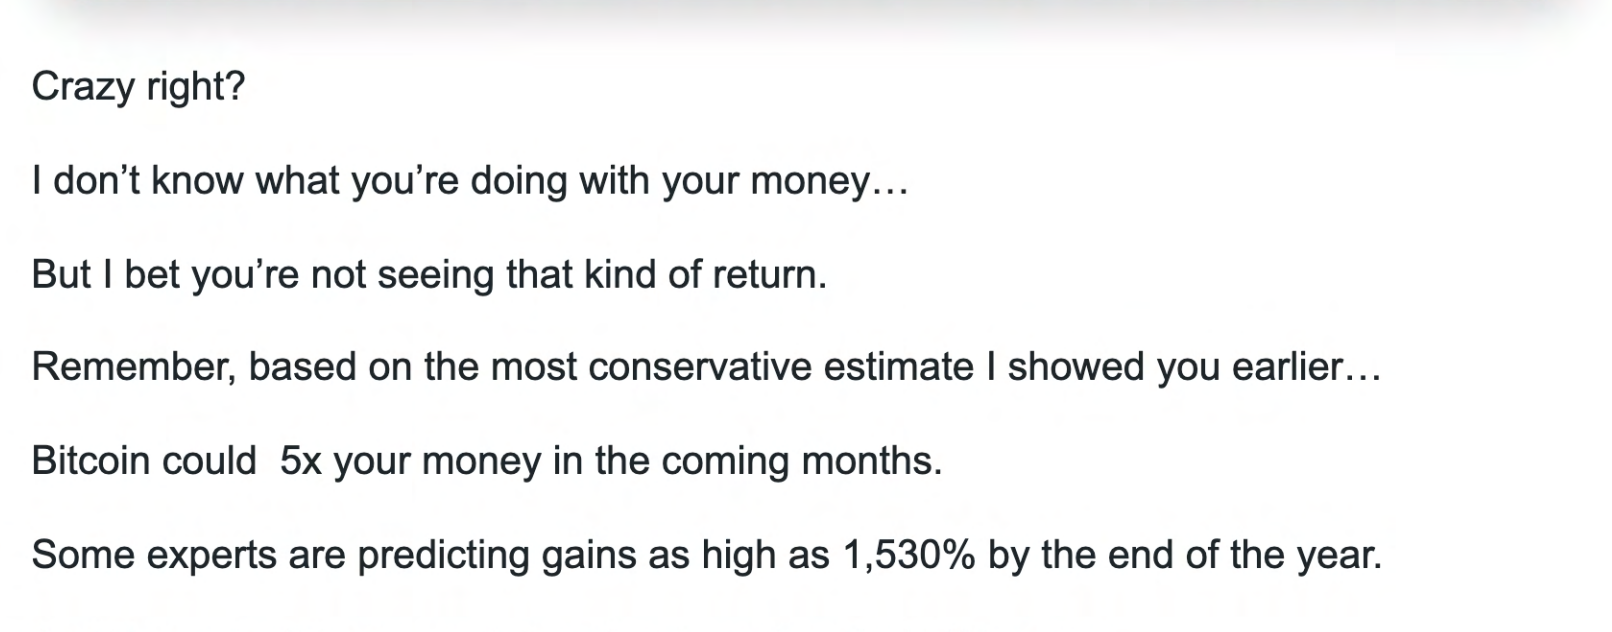
According to a new report in *The Wall Street Journal*, the Fed is already preparing for more stimulus.

If they announce more money-printing or any type of "easy money" policy…

It could send cryptos soaring higher.

Just look what happened back in March 2020, when the Fed announced it would print money.

Bitcoin started a 180% run.



Crazy right?

I don't know what you're doing with your money…

But I bet you're not seeing that kind of return.

Remember, based on the most conservative estimate I showed you earlier…

Bitcoin could 5x your money in the coming months.

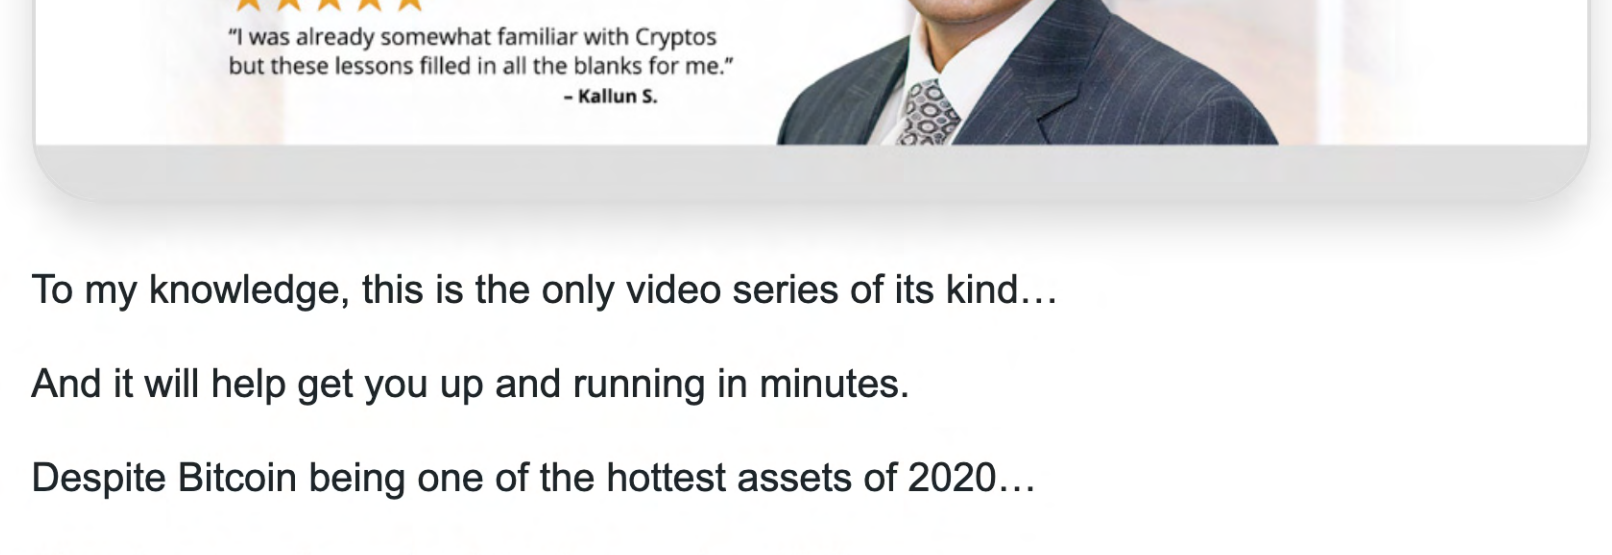
Some experts are predicting gains as high as 1,530% by the end of the year.

And if you don't know anything about cryptos, do NOT worry.

Because I've recorded a crypto master course for you…

Explaining everything you need to know.

And I'd like to give you access today.



★★★★★ "A must for newbies entering the crypto market." - Michael H.

★★★★★ "I am no longer intimidated by cryptocurrency." - Bonnie K.

★★★★★ "I was already somewhat familiar with Cryptos but these lessons filled in all the blanks for me." - Kailun S.

To my knowledge, this is the only video series of its kind…

And it will help get you up and running in minutes.

Despite Bitcoin being one of the hottest assets of 2020…

There's a ton of people still sitting on the sidelines…

Simply because they don't know how to get started.

And that's a shame because I'm convinced cryptos will mint millionaires in the coming months.

I don't want you to be left out.

That's why in this video series, I'll teach you…

*How to get started with as little as $100. (Yes, even though Bitcoin is trading above $10,000… I'll show you how to buy your share for as little as $100.)

*How to open your account online with a reputable crypto broker… (It's way easier than you think.)

*How to place your first crypto trade. (If you can buy a stock, you can do this.)

*And much, much more.

We'll walk you through it step by step, so there will be no guesswork.

When you're done with this course, you'll be ahead of 99% of Americans.

I'll tell you how to claim your course in just a moment.

But first let me show you the second step I recommend…

Step #2: Buy my top small crypto picks for 2021

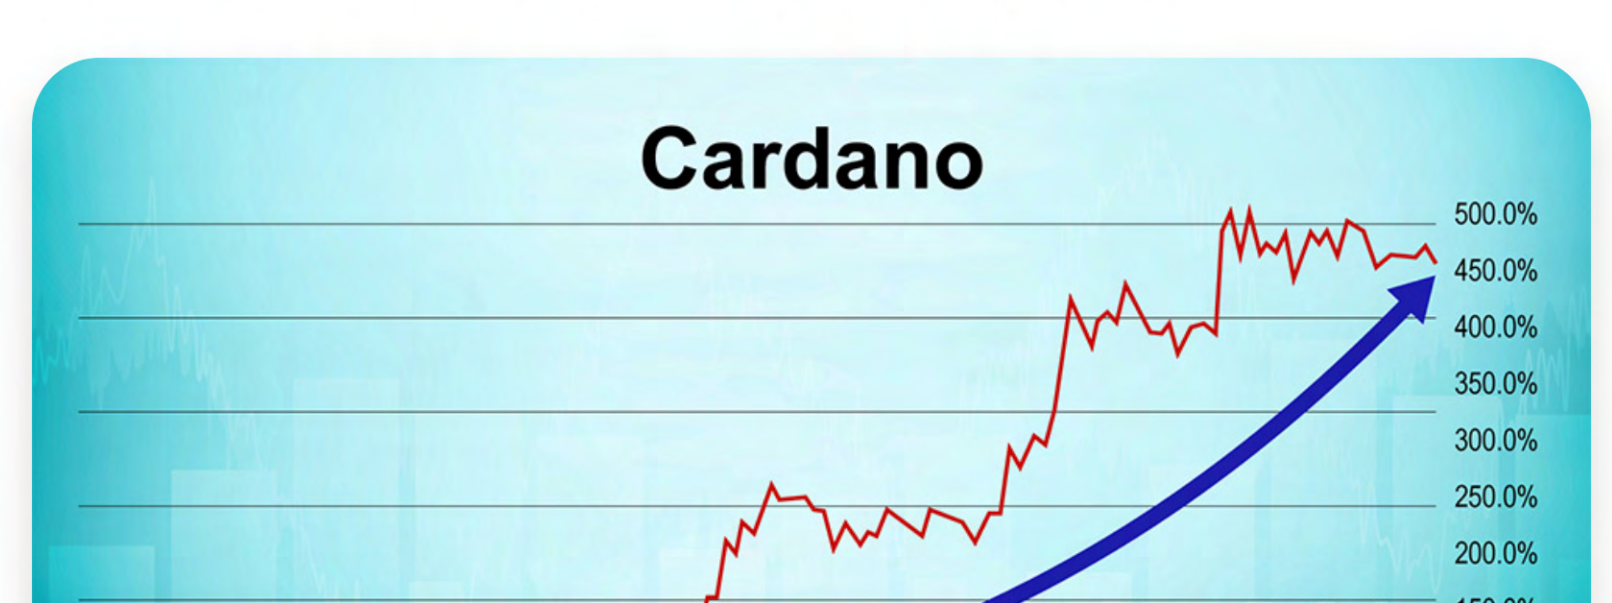
I have no doubt you'll make a ton of money with Bitcoin.

But you could make even more with other cryptos that are trading for pocket change.

Just look at what's happening this year alone.

Yes, Bitcoin is up big…

But last year, a tiny crypto called Cardano jumped as high as 623%.



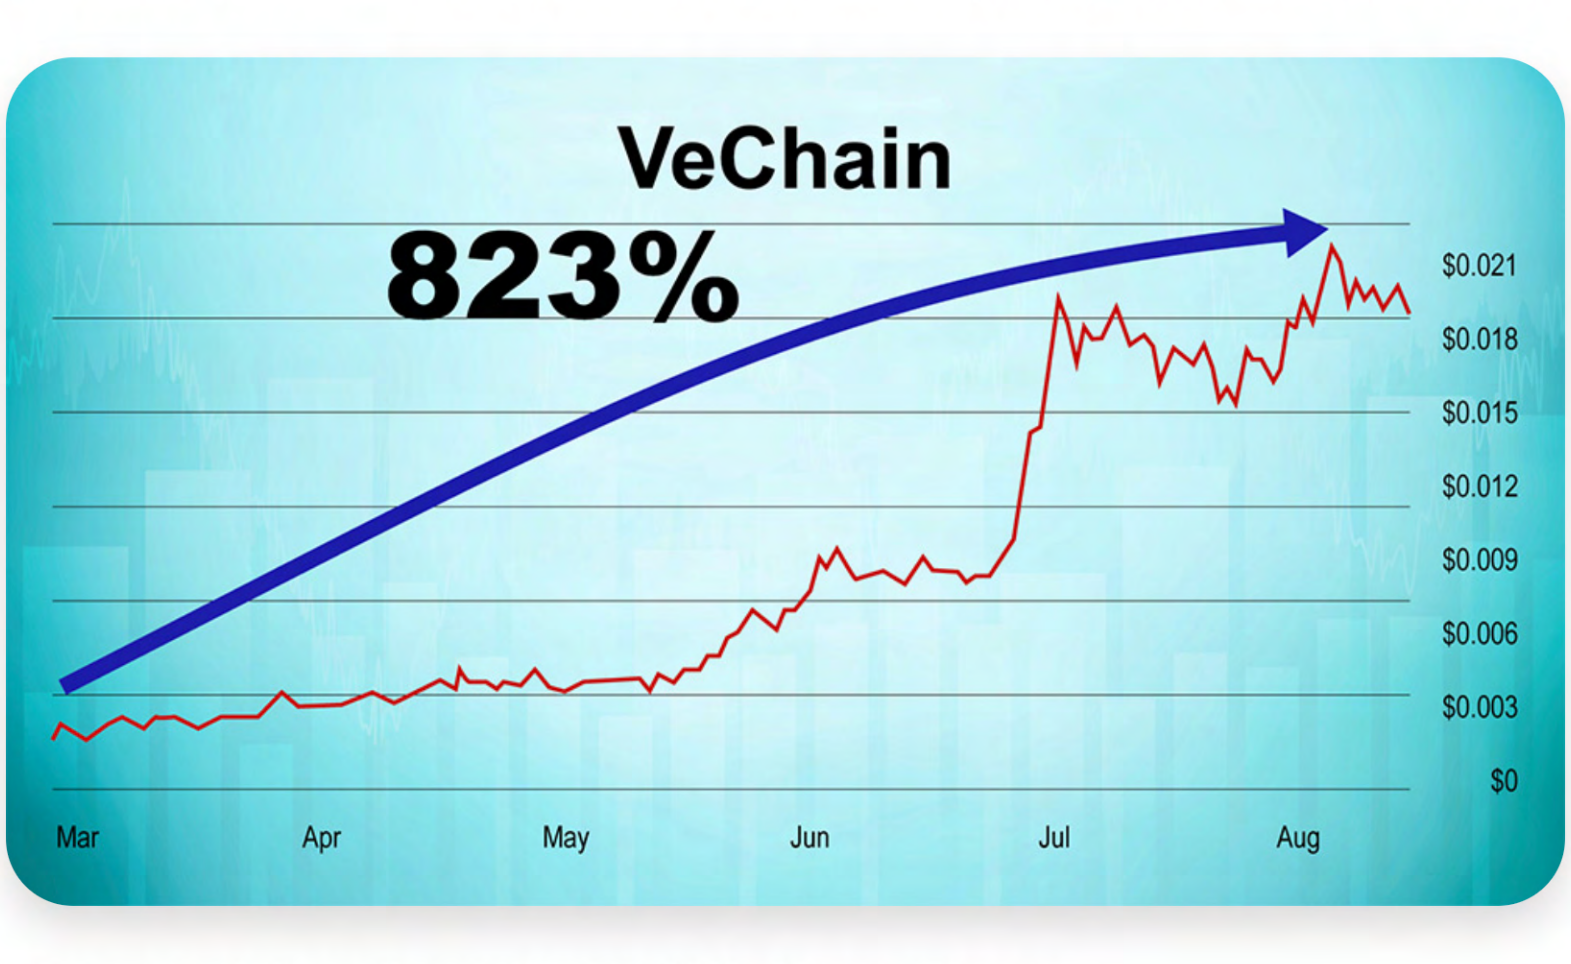
These explosive gains are only possible because many of these smaller cryptos trade for cents on the dollar.

As I record this, Cardano for example is still trading at 14 cents AFTER that major rally.

That means it just needs to go up another 14 cents and BOOM…

You double your money.

Or look at another smaller crypto called VeChain. Last year it jumped as high as 823%.



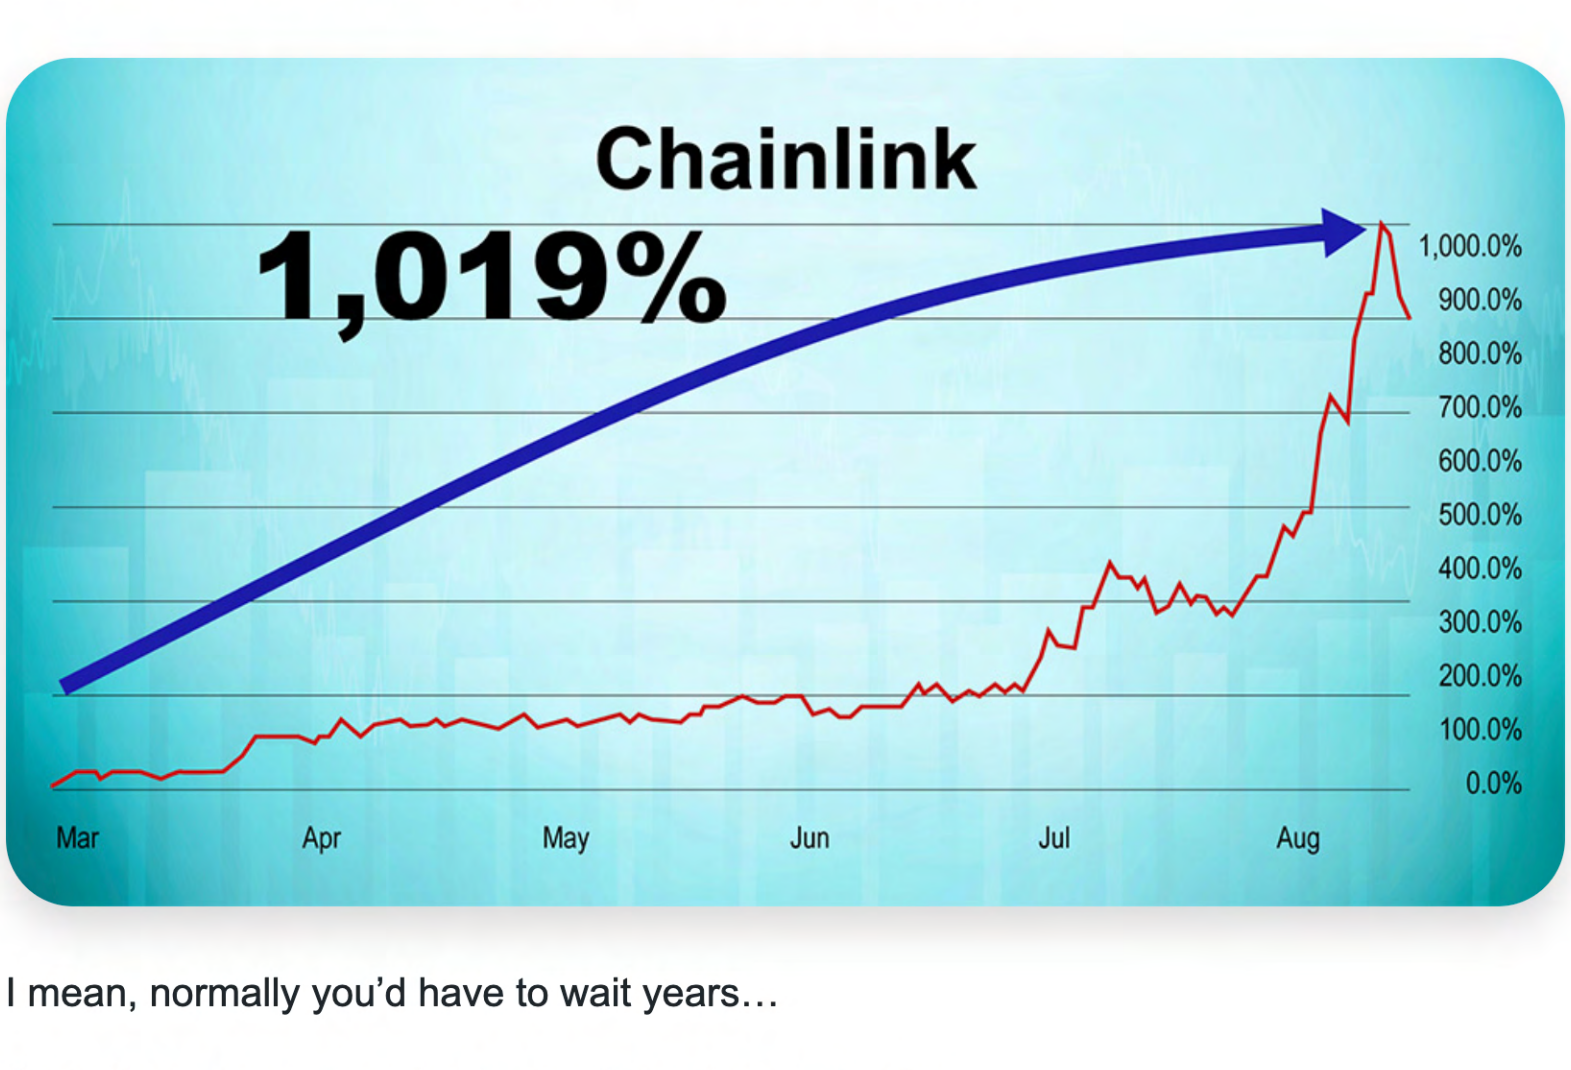
That means had you invested just $1,000 a few months ago…

You'd be up as much as $9,230.

To put that in perspective, that's 31 times MORE money than what you could have made investing in the S&P 500 index.

Or look at another small crypto called Chainlink.

Last year, it jumped by as much as an incredible 1,019%.



I mean, normally you'd have to wait years…

Sometimes even decades to see those types of gains.

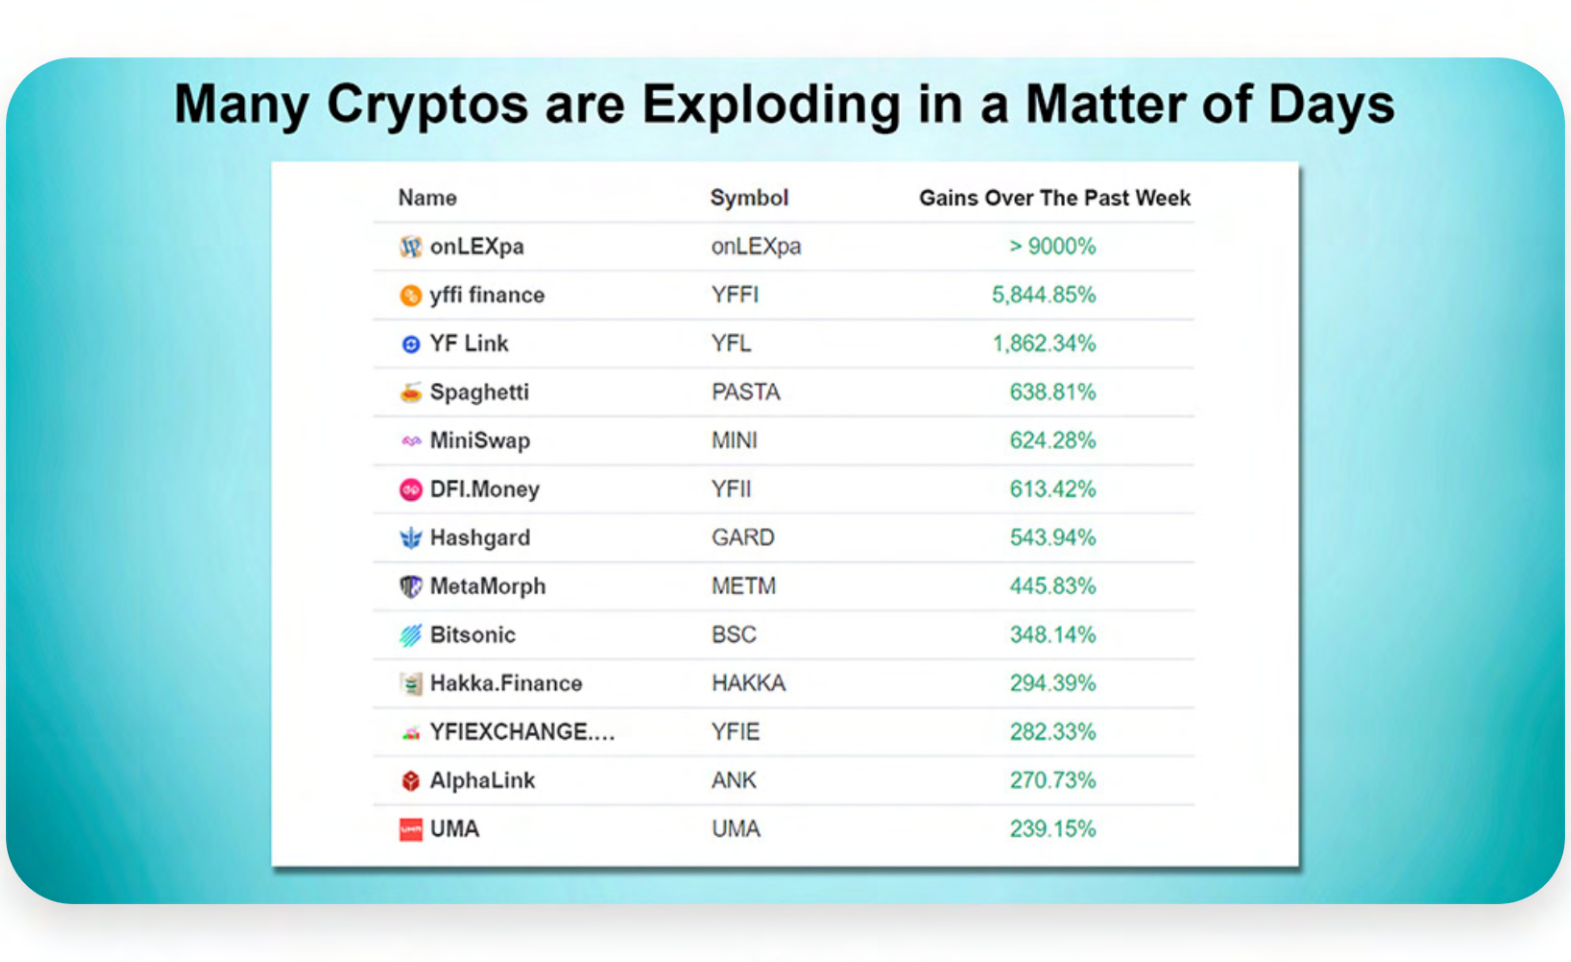
And yet, you could have already made 10 times your money in a few months with this tiny crypto.

But here's what's really incredible…

As amazing as these gains are, they're not even the top performers.

Not by a long shot.

Check this out. This is just unbelievable.



Many Cryptos are Exploding in a Matter of Days

Name	Symbol	Gains Over The Past Week
onLEXpa	onLEXpa	> 9000%
yffi finance	YFFI	5,844.85%
YF Link	YFL	1,862.34%
Spaghetti	PASTA	638.81%
MiniSwap	MINI	624.28%
DFI.Money	YFII	613.42%
Hashgard	GARD	543.94%
MetaMorph	METM	445.83%
Bitsonic	BSC	348.14%
Hakka.Finance	HAKKA	294.39%
YFIEXCHANGE....	YFIE	282.33%
AlphaLink	ANK	270.73%
UMA	UMA	239.15%

In my 30 year-career, I've never seen anything like this.

Some of these cryptos jumped as much as 1,862%... 5,845%... and even 9,000%...

And that's just over one week.

That's just insane…

Because had you invested just $1,000 in each of those…

A week later you would have a little more than $223,000.

Think about that…

That's almost a quarter million dollars…

In just one week.

Can you see now how some of my followers reported turning a small amount of money into millions?

BLOCKCHAIN MILLIONAIRE

That's why I put all the details on my top 3 tiny cryptocurrencies in a special report called ***Blockchain Millionaire: How to Turn $675 into $1 Million With My Top 3 Small Cryptos for 2021***.

I'd like to give you access right now….

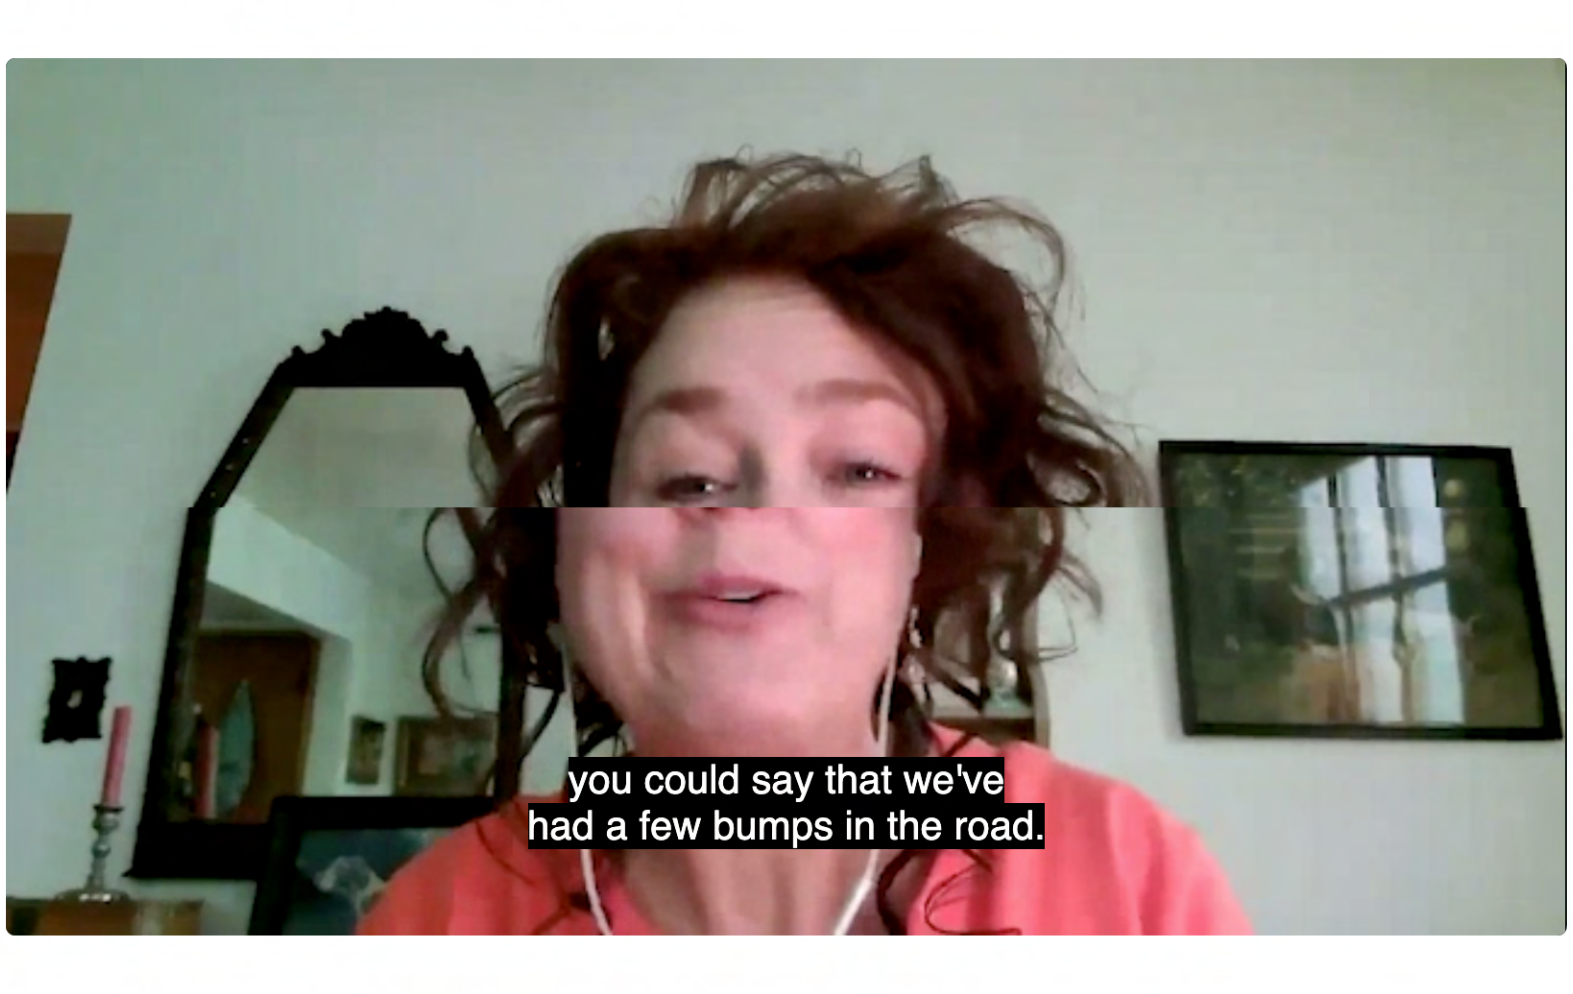
Because they each have the potential to 10x your money by next year.

And based on what already happened to some of my readers, I'm being very conservative.

In fact, let me play a clip for you right now.

I want you to meet B.J. because she said she turned $12k into over $1 million in just 18 months…

And her story is just incredible. Check it out…



you could say that we've
had a few bumps in the road.

B.J.—$12k to over $1 million in 18 months

*The investment results described in these testimonials are not typical; investing in cryptocurrencies and securities carries a high degree of risk; you may lose some or all of the investment.

Incredible, right?

Now, keep in mind that

All investments carry risk...

And past performance does not equal future success.

I think we all know the crypto market can be extremely volatile, right?

That's why I normally recommend folks just invest a small portion of their portfolios into crypto…

Because there's no need to bet the farm on it.

You see, the secret here is many of these cryptos are trading for pocket change…

So even if you're starting with a few hundred dollars, it could still be life-changing.

Look, I know you probably get bombarded with promises of riches all the time.

And most of them are all BS.

But what I'm talking about ALREADY happened to a few folks.

It's already a reality for them.

So it absolutely can happen to you too….

Because with explosive gains like those, even a small amount of money could be enough to fund your entire retirement.

Again, all the details on these cryptos are inside this report called ***Blockchain Millionaire: How to Turn $675 into $1 Million***.

I'll show you how to claim this report in just a moment.

First, there's still one more step I recommend you take right now.

Step 3: Invest in the technology that's making all this possible

I'm sure you've heard of blockchain, the technology behind cryptocurrencies.

What you might not know is that Bitcoin was just the first application of that tech.

It's much, much bigger than that.

That's why Forbes calls it…

"*The biggest disruptor in technology since the 1990s.*"

PriceWaterhouseCoopers cites this technology as a…

"Once in a generation opportunity."

And CNBC reports…

"The next few years may be about as intense and heady as the 1990s. [This technology] will be the biggest thing since the internet itself."

So what's the big deal about blockchain?

We all have facts and information we don't want accessed, copied, or tampered with.

But on the internet, there's always a chance it could be hacked or modified.

Blockchain solves that problem because it's a virtual ledger capable of recording and verifying a high volume of digital transactions.

It's a bedrock we know won't change once we put something on it…

And where a transaction will be verified only if it follows the rules.

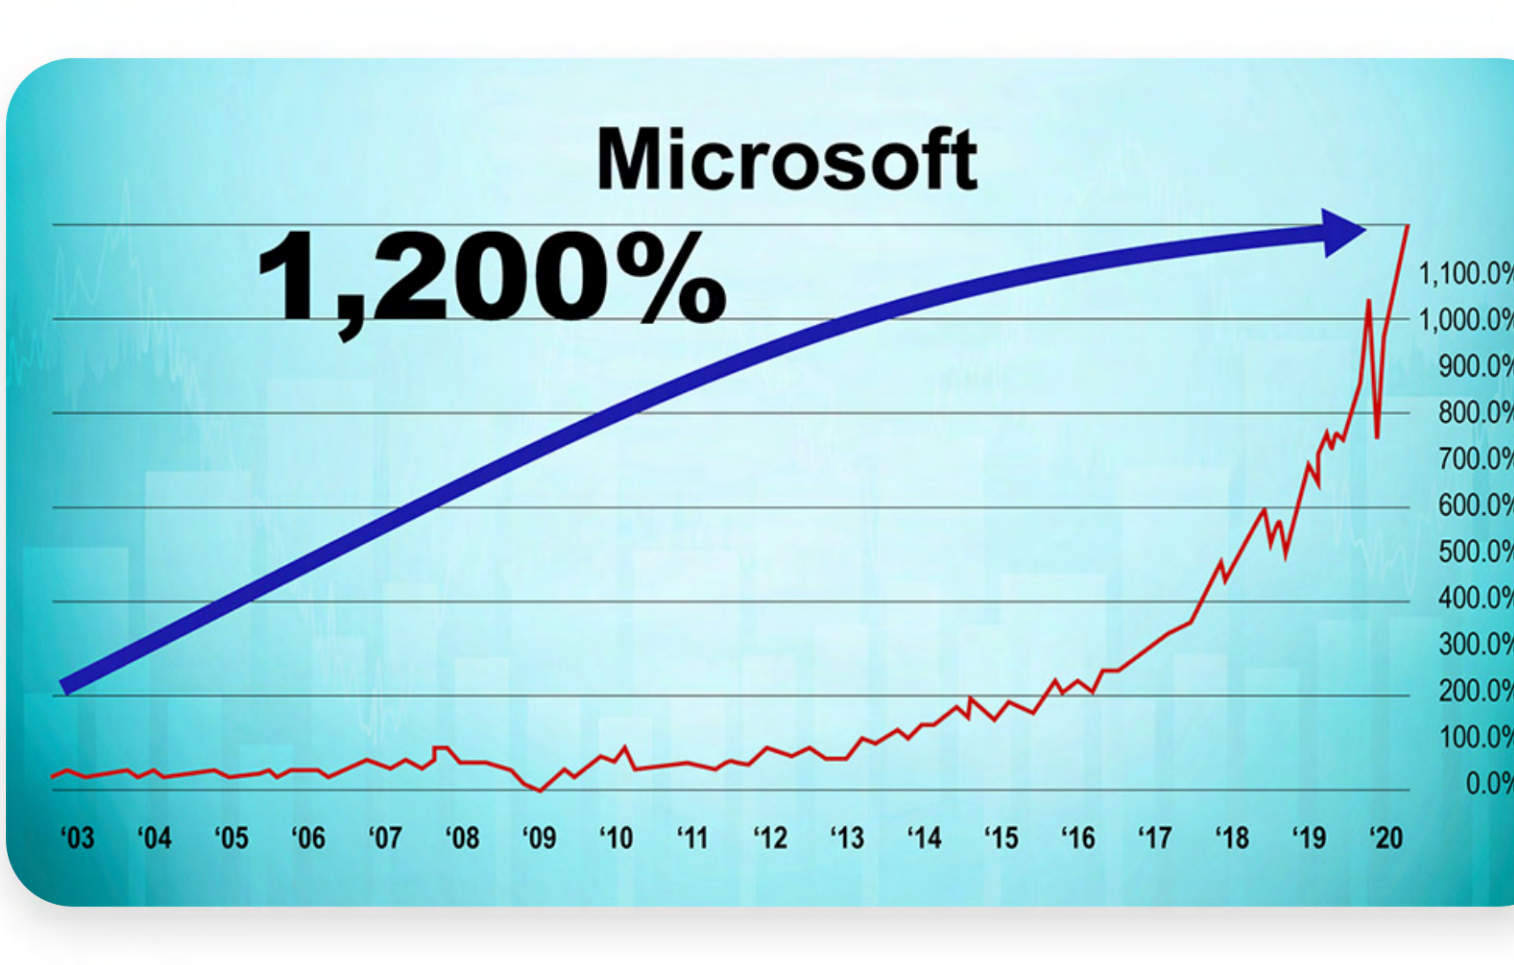
That's why this tech will disrupt several industries, including banking, real estate, gaming, healthcare, transportation, etc…

And it's why the World Economic Forum says it's set to explode 295,762% by 2027.

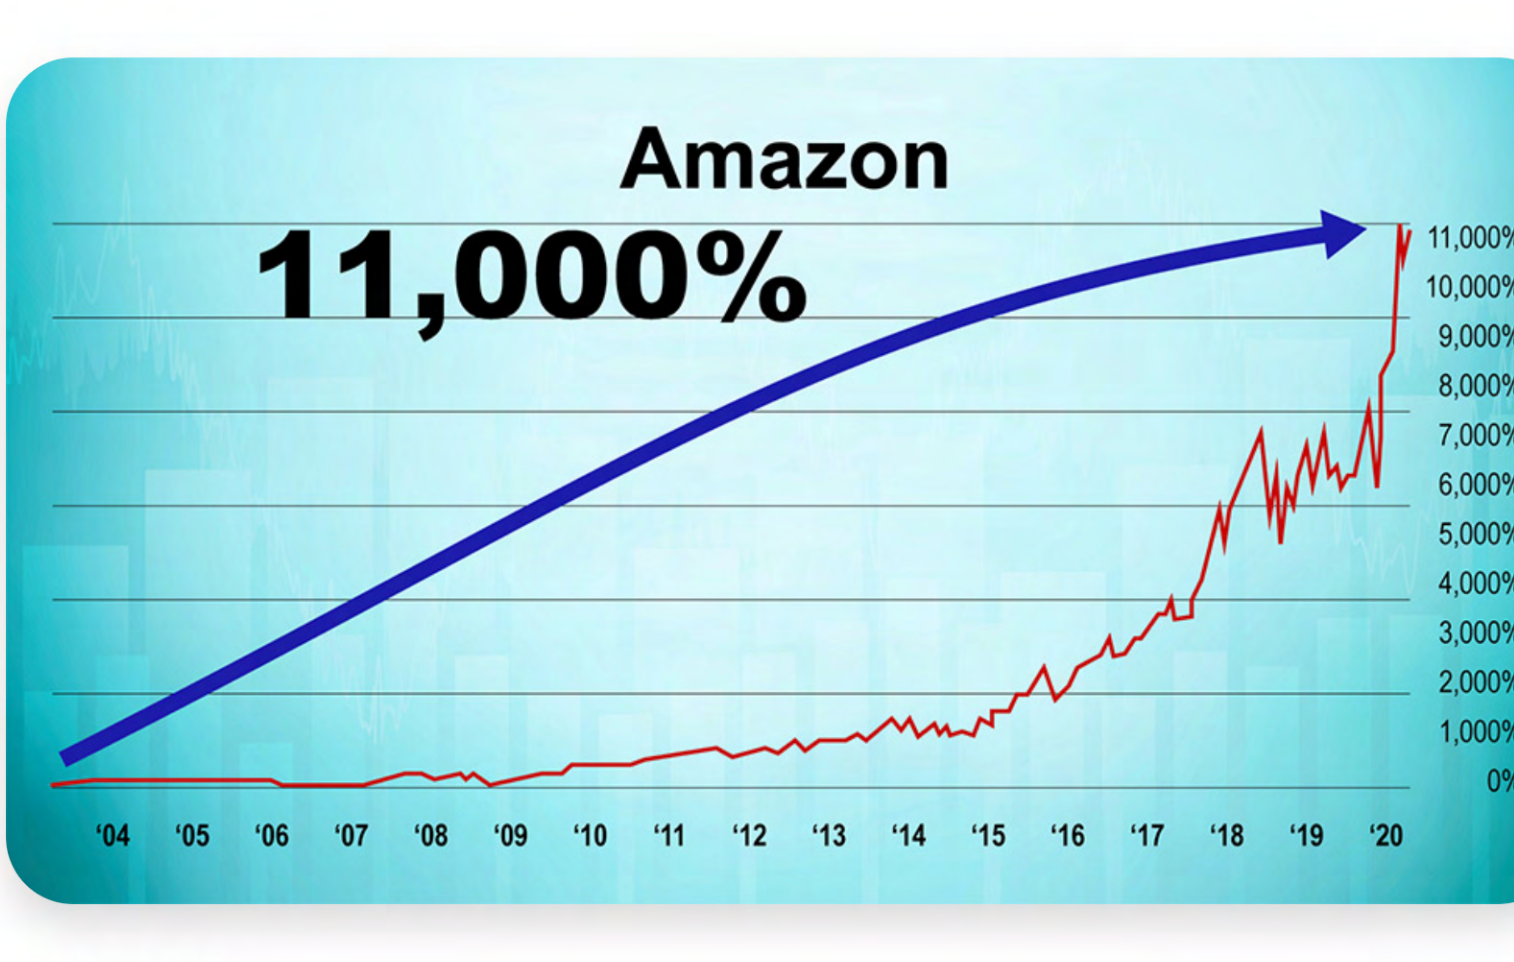
Bottom line…

Investing in early stage blockchain stocks today is like investing in internet stocks back in the early 2000s…

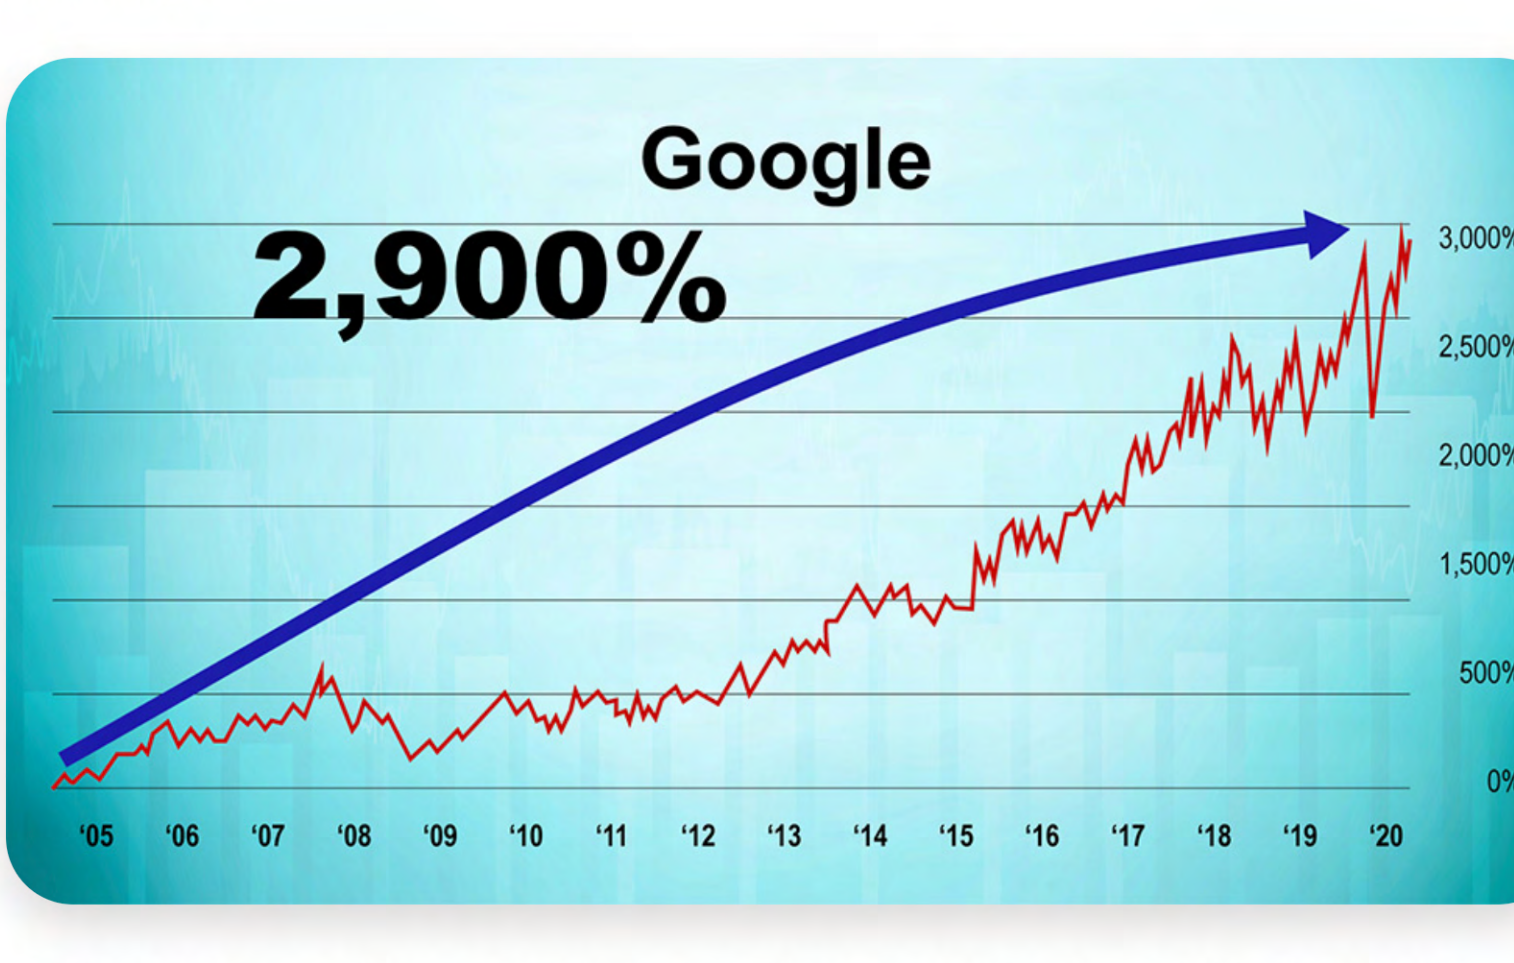
Like Microsoft…



Amazon…



And Google…



Just $1,000 invested in each of those back then would have turned into $154,000.

That's the potential we have once again with blockchain stocks.

And to make it easy for you…

I already did all the research and found the top players that are driving this revolution.

And I put all the details inside another report called ***My Top Plays for Blockchain's 295,000% Revolution*.**

I'd like to give you access to this report right now.

MY TOP PLAYS FOR BLOCKCHAIN'S 295,000% REVOLUTION

So How Can You Get Started Today?

Well, I could just give you all this information and wish you good luck.

And I'm sure you'd do very well.

But with the Fed printing money like never before…

And with institutional investors buying cryptos like never before…

I'd like to stay in touch and guide you every step of the way during this historic development.

You see, earlier in my life, I went through a lot of financial difficulty… and I don't wish that even on my worst enemy.

I grew up in Britain's foster care system.

I lived in a cramped, unheated room on top of a garage. Some nights were so cold I couldn't even sleep.

I knew in my heart: 'there has to be more to life than this.'

So when I was 16, I left for America.

With $150 in my pocket, I set off to New York City because I wanted to work on Wall Street.

Within 2 years of landing in America, I went from flipping burgers at a Roy Rogers and working at a loading dock to an entry-level position at a major U.S. investment bank.

By age 20, I became the youngest VP in the firm's history.

But the higher I rose through the ranks… the wealthier I got...

The more I noticed how Wall Street was rigged… and it was designed to make the rich get even richer.

With my blue collar background, this didn't resonate well with me…

So I decided to leave everything behind…

And joined an independent financial research firm to share my insights with Main Street Americans.

I wanted to help folks find ways to retire early, pay off their mortgage, pay for their kids' or grandkids' tuition, buy a new house…

Or whatever their dreams were.

And so far, we've done a great job.

You see, all the folks I mentioned before, including the one who have become millionaires…

Follow my work every month in a special publication called *The Palm Beach Letter*.

Today I'm inviting you to take a risk-free subscription and join us.

The moment you do, I'll give you access to everything I've mentioned so far.

In each issue, I'll explain the biggest trends in the markets and select my #1 investment for that month…

It could be a stock. An income play. Or some other, little-known alternative I discovered while doing my boots-on-the-ground research.

I'll do all the work and just hand you all the information you need to decide if you want to participate.

I'll tell you what to buy, what price to pay, and how much money I expect you to make.

Since I took over the reins of this publication in 2016, we've averaged 154% per year.

That's 10 times better than the S&P, at record highs….

And 81 times MORE than the average investor.

This is unheard of.

To put that in perspective, the best hedge fund in the world is The Medallion fund…

Which has been called "a $74 billion money-making machine like no other."

It has averaged a 66% annual return, before fees, from 1988-2018.

Because of this incredible performance…

They charge a 5% annual flat fee plus 44% of the profits, the highest fee on Wall Street.

That means if you invest $10,000 with them…

In a typical year, you'll have to pay them $3,404 in fees.

Why am I telling you all this?

Because we're performing even BETTER than them…

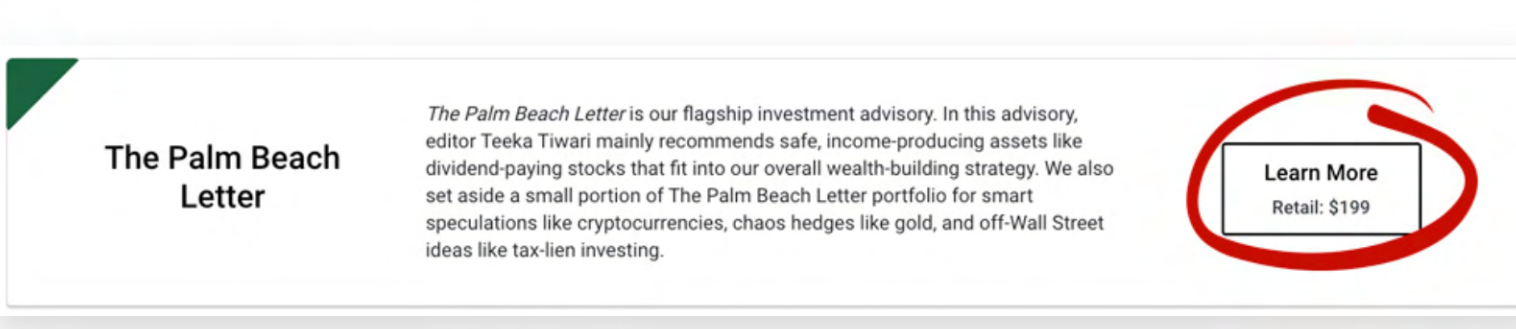
So if I charged $3,000 for my research it would be a bargain.

But I'm not publishing my research to rich institutional investors.

I'm publishing it to everyday folks like you.

For that reason, we sell subscriptions to *The Palm Beach Letter* on our website for $199.

That's per year. Not per month.



The Palm Beach Letter

The Palm Beach Letter is our flagship investment advisory. In this advisory, editor Teeka Tiwari mainly recommends safe, income-producing assets like dividend-paying stocks that fit into our overall wealth-building strategy. We also set aside a small portion of The Palm Beach Letter portfolio for smart speculations like cryptocurrencies, chaos hedges like gold, and off-Wall Street ideas like tax-lien investing.

When you consider that many *Palm Beach Letter* readers have had opportunities to become millionaires by following *just one* of my recommendations…

I think you'll agree $199 is a fair price.

But because you probably don't know me yet…

I understand I need to earn your trust first.

So I'm going to give you a special discount today.

But before I give you all the details, there's one more report I'd like to give you as a gift when you take this risk-free subscription…

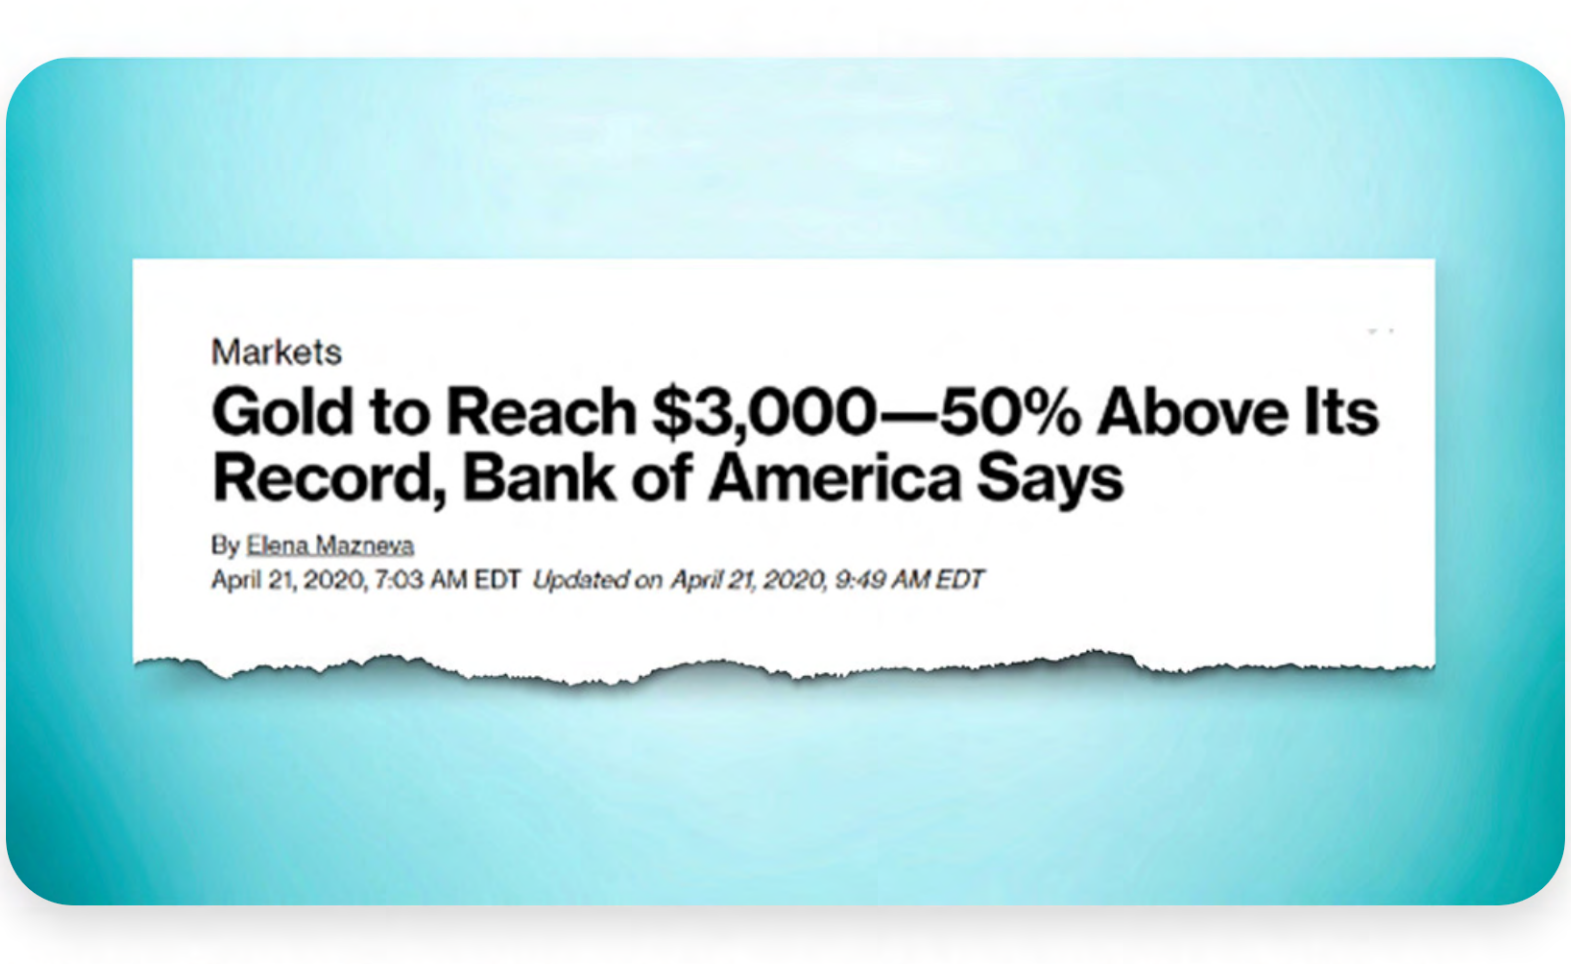
My #1 Way to Own Gold

It's no secret that gold can also help you protect against inflation.

It's why Goldman Sachs told its clients to load up on gold, saying…

"We have long argued that gold is the currency of last resort, acting as a hedge against currency debasement."

Bank of America is recommending the same, predicting a 50% jump.



Markets

Gold to Reach $3,000—50% Above Its Record, Bank of America Says

By Elena Mazneva

April 21, 2020, 7:03 AM EDT *Updated on April 21, 2020, 9:49 AM EDT*

Billionaire Thomas Kaplan thinks gold will go even higher, predicting a $5,000 price.

Unfortunately, most people don't know what's the right way to invest in gold.

They simply buy the ETF GLD, which is a very popular fund that tracks the price of gold.

But that's NOT what I recommend…

Because that fund doesn't give you ownership of physical gold.

But I found a way for you to own physical gold with just one click from your computer or phone…

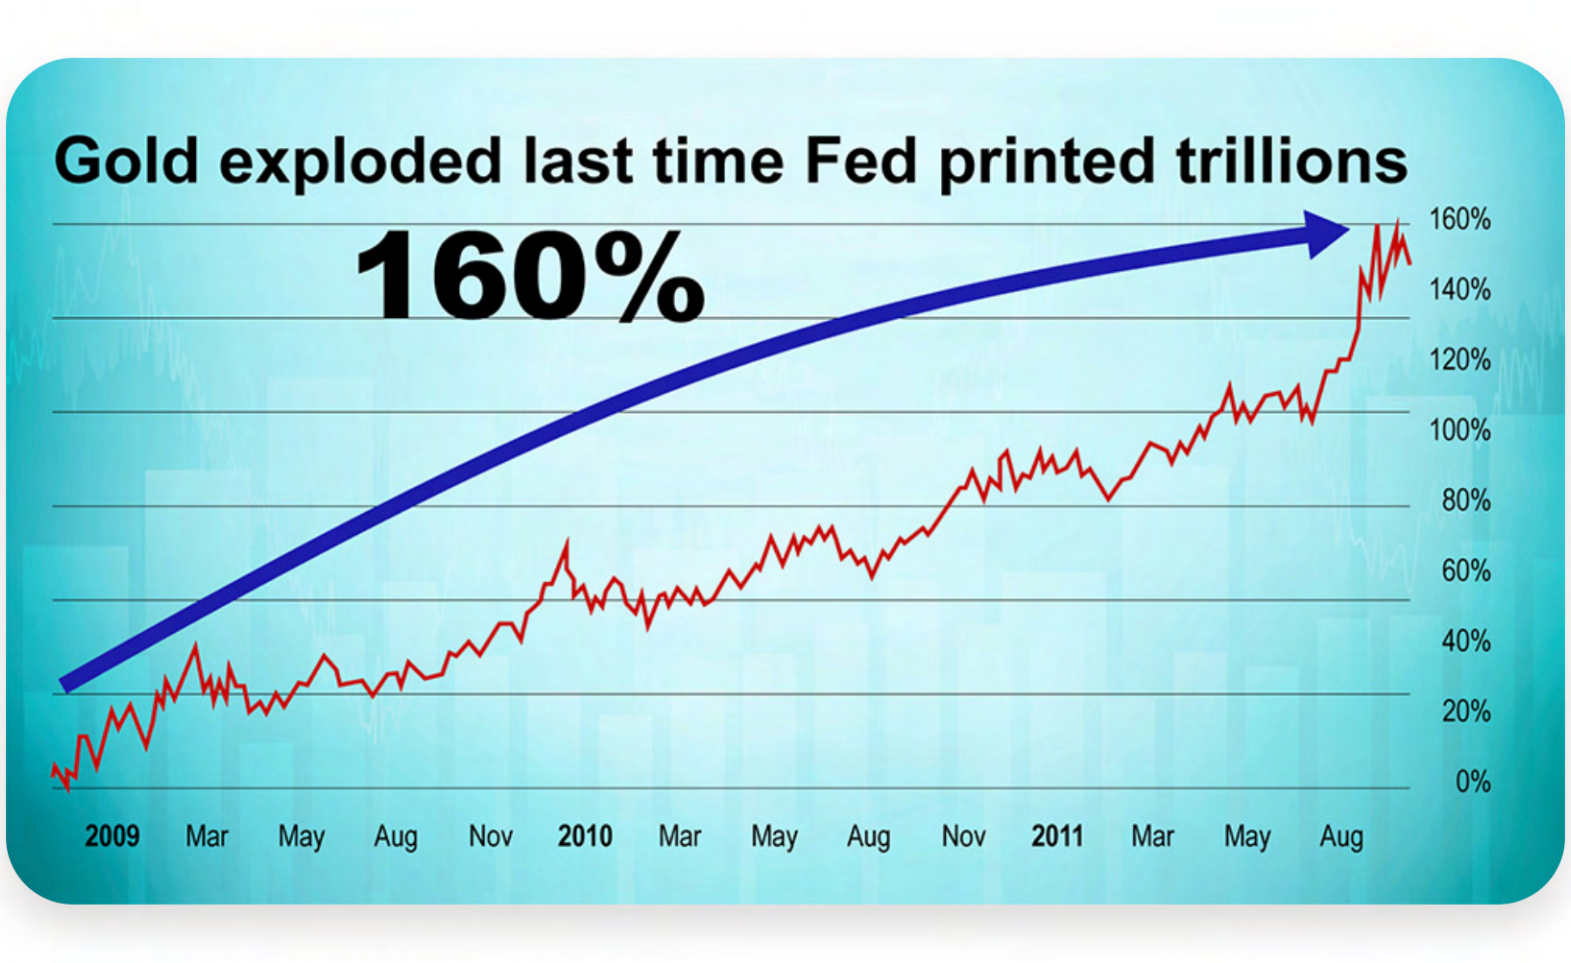
A way for you to own physical gold right from your online brokerage account.

That way, you don't have to worry about storage, coin premiums, or finding a reputable broker.

You can even buy it and hold it in an IRA — or a Roth IRA… where your capital gains won't be taxed.

Plus, you can opt to take delivery of your gold at any time, as long as the amount you want is greater than the minimum redemption amount.

Remember, when the Fed announced money-printing back in 2008, gold exploded higher.



I expect something similar this time.

Which is why when you take a risk-free subscription to *The Palm Beach Letter*…

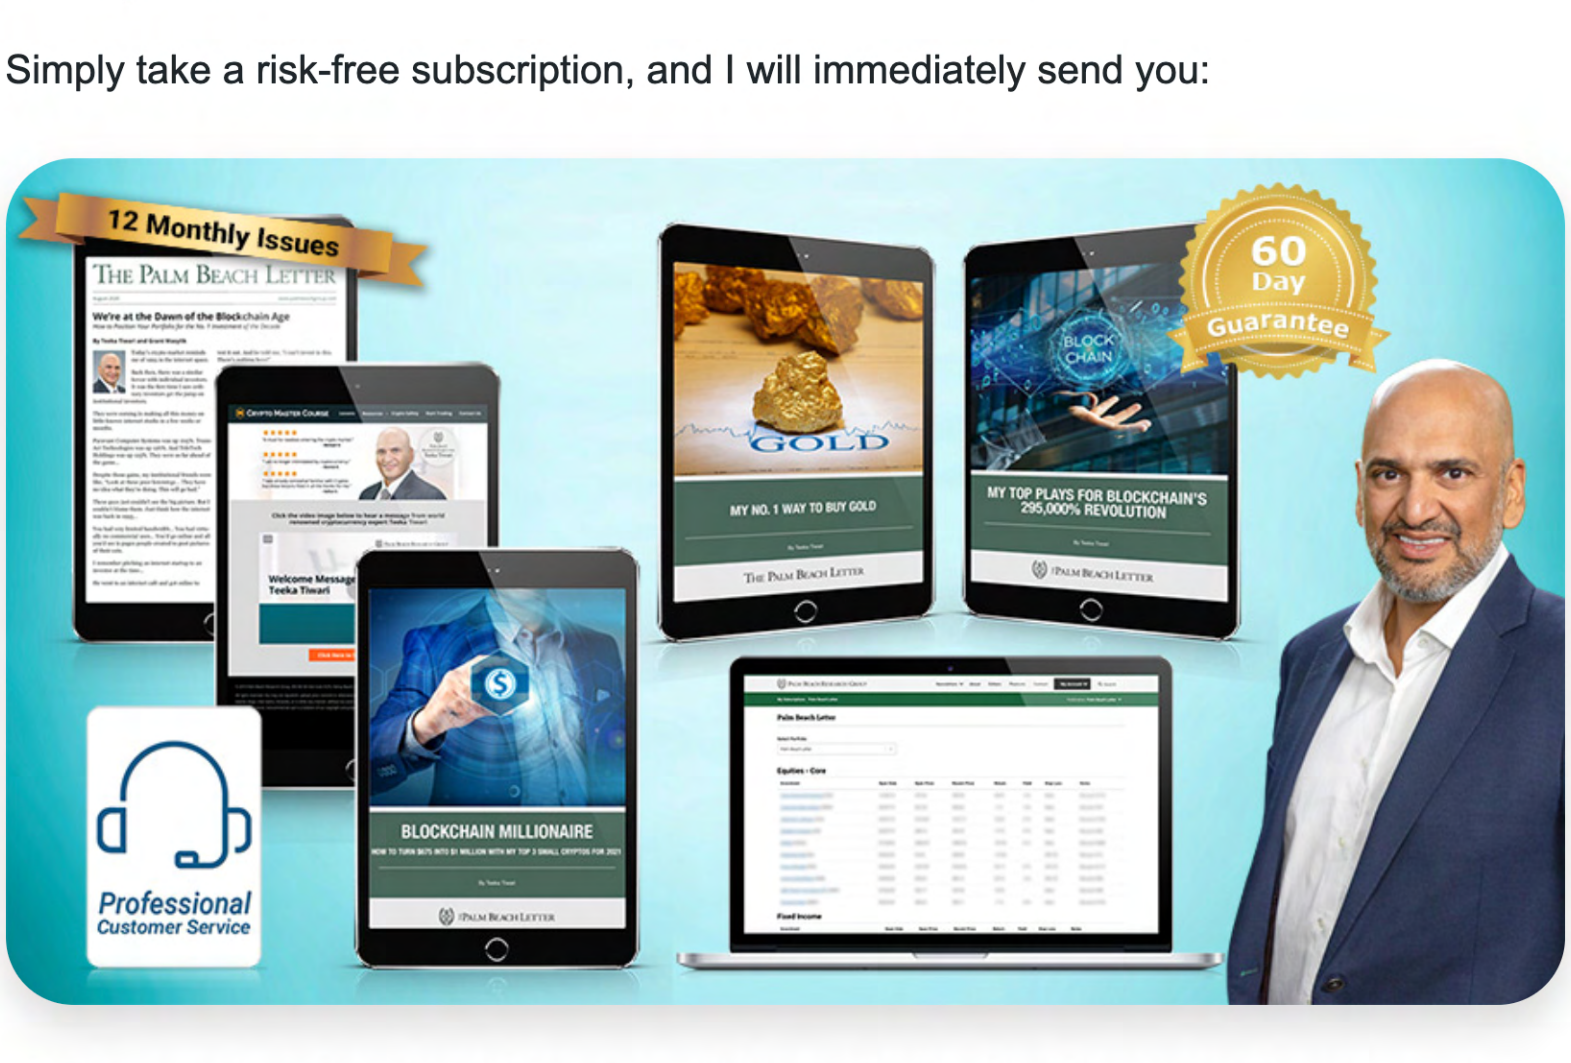
I'll also give you this FREE report called **My No. 1 Way to Own Gold.**

It will walk you step by step through how to buy physical gold from your online brokerage account.

And when I say "risk-free subscription," I mean it.

You can take a look at my research and receive everything I've mentioned so far, at no risk to yourself.

Simply take a risk-free subscription, and I will immediately send you:



- **12 months of my best investment ideas:** On the first Thursday of each month, you'll get a brand-new issue of *The Palm Beach Letter*. I don't limit myself to cryptocurrencies or blockchain. In the past, I've covered safe income stocks… alternative investments… tech stocks, etc... (Value: $199)
- Bonus #1: ***My Crypto Master Course*** will take you from newbie to a pro in no time. (Value: $99)
- Bonus #2: ***Blockchain Millionaire: How to Turn $675 into $1 Millionwith My Top 3 Small Cryptos for 2021***. (Value: $199)
- Bonus #3: ***My Top Plays for Blockchain's 295,000% Revolution***(Value: $199)
- Bonus #4: ***My #1 Way to Buy Gold***, which will show you how to own physical gold with a few clicks online. (Value: $99)
- **Full support**. Our specialists are located in Delray Beach, Florida. Please feel free to call or email them for any help you need with your subscription. (But please note, they cannot provide any individual investment advice.)
- **Access to our one-of-a-kind model portfolio**. Like I showed you before, *The Palm Beach Letter's*model portfolio has crushed even the best hedge fund in the world.
- You'll also get full, 24/7 access to our members-only website…

That's a total value of $795.

But today only, you don't have to pay anywhere near that.

A subscription to *The Palm Beach Letter* is only $49 for the entire year.

That's 13 cents a day.

Why so affordable?

Let me be clear….

This price is low enough to make this a no-brainer for you…

And it's enough to cover the costs of keeping this page online.

My publisher will most likely not make a profit on this offer.

But that's OK, because once you start seeing gains with cryptos and all the opportunities I present in the pages of *The Palm Beach Letter*…

I'm confident you'll stick with me for a long time.

And I don't want your money if you're not 100% happy.

That's why when you sign up for *The Palm Beach Letter*, I'll give you 60 days to test out the service — at no risk to you.

And if during that customer satisfaction period you find that you're not getting life-changing information…

Or for any reason at all…

You can simply call our customer service team and cancel your subscription.

We'll give you a full refund, no questions asked.

And we'll let you keep everything you receive as a subscriber — at no charge.

You can keep all the issues…

You can keep all the special reports…

You can keep everything.

This means that there's no risk to you at all.

It's our way of saying thank you for giving *The Palm Beach Letter* a try.

To get started, simply click on the button below.

It will take you to a secure order form, where you can review everything one last time before you join.

Look, right now you're at the same crossroads as B.J., before she started following my work.

As you heard from her, she was broke and had no hope for a comfortable retirement.

Everything changed when she started following my recommendations.

Today she's literally a millionaire and no longer has to worry about retirement.

You're facing the same fork in the road…

You can pretend you never saw this information and go on with your life…

Or you can take action today to change your future.

This is a once-in-a-lifetime opportunity.

The mass adoption of cryptocurrencies will only happen one time.

If you miss this, there will never be another chance.

I'm sure you'll make the right decision for you and your loved ones.

I look forward to welcoming you to *The Palm Beach Letter* in the next few minutes.

I want to thank you for listening…

And always remember…

Let the game come to you.

Teeka Tiwari
