

**\*\*\* ATTENTION SENIORS \*\*\***

Study shows this doctor-approved breakthrough helps give...

# **HEALTHIER LUNGS IN 42 DAYS!**

- ✓ **Promotes stronger, healthier lungs**
- ✓ **Improves breathing by up to 57%**
- ✓ **Improves one marker of lung health to that of a 43-year-old!**

*"It's the best solution I've found for anyone who wants healthier lungs."*

*—Award-winning MD*

ATTENTION: If you are at all interested in improving the health of your lungs, I have wonderful news for you. In the next few minutes, you're going to discover an amazing health breakthrough that can help **IMPROVE** the health of your lungs... Helping you enjoy deeper, fuller breaths... *Opening your airways... Improving your breathing... And making it so you never even have to think about your lung health...*

Because YOU can now have **STRONGER, HEALTHIER LUNGS**. In fact, in one landmark study, this breakthrough helped improve one marker of lung health to that of a fit 43-year-old.

Hi, I'm **Dr. Richard Gerhauser, MD**. And in this presentation, I'm going to show you a **discovery** from brilliant doctors in Israel that research shows can help improve lung health in just 42 days... **Improve breathing** by up to 57%... And help keep your lungs healthier... and stronger... than you ever imagined.

I'm so excited to show you this, because if you want to help keep your lungs healthy as you age... **This could be exactly what you've been waiting for**. Because, with the breakthrough I'm about to show you... **It's now possible to help IMPROVE your lung health**. Making them stronger, keeping them healthy, and helping you breathe easy.

That means it could now be easier to take that jog around the block, without feeling as short of breath... Or spend time with your grandkids, chasing them around your yard... And **sleeping easy** at night, with the peace of mind knowing your lungs are healthy... And **no more thinking** about your aging lungs.

It doesn't matter if you've never taken your lung health seriously until now... If you simply read this presentation and do what it says... You can now discover how it's possible to help your lungs stay healthy.

See, this breakthrough works by opening up your airways and **strengthening** your lungs. In other words, it actually helps improve your lung health from the inside out...

next page please >>>

Not only **making your lungs stronger and healthier...**  
But helping you breathe easier.

Even better? One study shows it started working in  
just 2 weeks.

Imagine, just weeks from today, feeling **perfectly relaxed**  
as you're able to more easily take deeper breaths.

Sure, it may sound hard to believe, but a study published  
in an international health journal **shows it works.**

Doctors in Israel started by gathering 92 older men and  
women... Before the study, these people all reported that  
they were concerned their lung health wasn't as good as  
it could be.

But then, doctors gave them a new solution... *something sur-  
prising*: a health-giving extract from a rare plant in Asia...  
All they did was take a small dose of this rare plant extract  
twice a day... And after just a few weeks...

## I was **SHOCKED** when I saw the results these patients had

The men and women taking this natural extract saw up to  
an incredible 57% **improvement in their breathing...** They  
started taking **deeper, life-giving breaths...** And they could  
exhale completely... Which means **easier, healthier breath-  
ing...** And **all the benefits that come with it.** Again, this  
was after just a few weeks taking this rare extract.

In fact, the results were so impressive... I knew this could  
be a game changer for anyone looking to help improve and  
support their breathing.

The best result, however, came when looking at their im-  
provement in a marker of lung health called VO2max—a  
way doctors measure how well you can breathe during  
exercise. Compared to before the study, the participants  
improved their VO2max to the levels seen in people in  
their 40s! That means...

## Their lungs could take in as much oxygen as a healthy 43-year-old!

Imagine taking **deeper, more relaxing breaths...** Forcefully  
exhaling all the air from your lungs... *Without* getting a little  
out of breath... And doing it with every single breath you  
take... Because you can keep **strong, healthy lungs** as you  
get older.

I understand if it sounds impossible, after all, if you're any-  
thing like me, you're not one to believe something without  
**rock-solid science.** I'll show you all the **scientific evidence**  
so you can review it for yourself.

I'll show you exactly what this breakthrough is and how you  
can start using it to help **get stronger, healthier lungs.** So you  
**can feel confident in your lung health...** And you'll see how...

## This breakthrough is completely different than anything you've ever tried

Finally, I'll show you how to use this breakthrough—from  
the comfort of your own home... To help experience **stron-  
ger, healthier lungs.** It takes just seconds to do. And it  
couldn't be **easier** to use.

First, however, let me back up and properly introduce my-  
self. Again, my name is **Dr. Richard Gerhauser, MD.** I'm 66  
years old and I've been a **medical doctor** for over 37 years.  
Over the last 37 years, I've seen how aging can impact your  
lungs... And how **important** it is to keep a young, healthy  
set of lungs as you get older.

But it wasn't until a patient of mine—we'll call him **Hal**—  
walked into my office one morning that I saw—firsthand—  
how much aging lungs affect your everyday life.

See, Hal was **73 years old...** And considering he was  
getting older, Hal was **thinking** about his lung health...  
He was hoping there was something he could do to help  
keep his lungs healthy.

## "I just don't feel like I can take a true, deep breath like I used to"

He complained that, some nights, he had **trouble falling  
asleep...** And he told me he had to take frequent breaks  
when going for a jog around the neighborhood. *Has that  
ever happened to you?*

Well, when I looked at his test results, I could tell Hal had  
trouble taking the same full, deep breaths he used to. In  
other words, Hal's lungs were old and worn out.

Now, at first, Hal thought it was HIS fault his lungs couldn't  
perform like they used to. But the truth is, it wasn't Hal's  
fault. And **it's NOT your fault** either. In fact, it's **completely  
normal** for lungs to slow down a bit as you get older. But  
the truth is... **it doesn't have to.**

Once you discover this **lung-improving breakthrough**—  
you won't have to think about your lungs any longer.  
Because it can help **give you strong, healthy lungs.**

See, at that very moment—when I saw the look in Hal's  
eyes—I vowed to find a way to **help** him. And then, one  
morning as I was browsing through a journal of the latest  
discoveries... I found it.

This discovery explains **WHY seniors can have trouble taking the same deep, solid breaths as they did when they were younger.** Along with how it **works** to help give you stronger lungs. And, I guarantee, if you keep reading...

## **This breakthrough could change your life for the better**

Let me explain... Take a look at the diagram to the right of your lungs:

As you can see, the airways running through your lungs look like tiny, upside-down trees. And see those little branches that stick out to each side? At the end of each of those branches are something called your **alveoli**. They may not look like much... But these tiny sacs are responsible for **taking in air** and **pumping it throughout your body**.

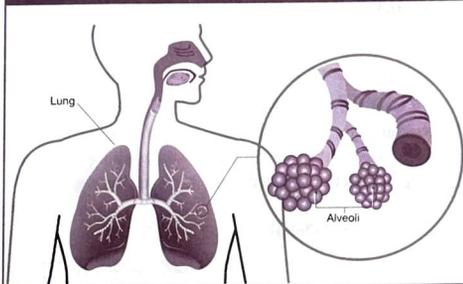

Imagine, for a second, a small **balloon** filling with air. As it fills up, **the balloon expands** and gets bigger. When you pinch the bottom, air stays put and the balloon remains inflated. Then, once you release your fingers... air "exhales" from the bottom of the balloon and it deflates.

Well, believe it or not, the alveoli in your lungs work the exact same way. When you take a deep breath, your alveoli fill with air... expanding and getting bigger... The oxygen in the air then goes through the walls of the alveoli into your bloodstream... and it rushes to everywhere you need it. Once the oxygen is gone and you exhale, the alveoli deflate... **Just like a balloon.** Well, as you probably guessed, there's just one problem...

**Anything that gets into your lungs... like pollution or particles from the environment... can affect your alveoli**

And when your lungs are exposed, these tiny alveoli have to **work harder** to pump oxygen throughout your body.

## **Anatomy of the Lungs**

Eventually, after expanding and deflating so many times, they lose their elasticity. Like a rubber band that's been stretched too many times... And once your alveoli lose their elasticity, they can't inflate and expand like when you were younger.

In other words, **they're like a tired old balloon**. They simply can't pull in as much air—or push it out like they used to. It's just a **FACT** that as we get older, our alveoli don't work as well as they used to.

However, this rare plant extract—I'll tell you exactly what it is in just a second—works like magic to strengthen your lungs...

**They can expand more fully and contract just like they did when you were younger...**

Which means you can take a **deeper breath** of air—with ease... And then push that air back out of your body... In fact, the study in Israel I told you about earlier, showed that it could **help improve one marker of lung health** so it's equal to that of a 43-year-old.

## **Meet Dr. Richard Gerhauser**

For years he's been the trusted doctor for celebrities, world-class athletes, and countless seniors looking to reclaim their health.

Dr. Richard Gerhauser, M.D. is one of the most pioneering and innovative minds in medicine today—and he delivers cutting-edge cures each month through his *Natural Health Response* newsletter.

In addition to being a board-certified medical doctor, Dr. Gerhauser has earned two master's degrees and has served as a clinical professor at the University of Arizona.

Let me tell you a little more about that study—because it confirms that this rare extract is a godsend for anyone wanting to help improve their lung health.

During the study, doctors used a scientific instrument called a “vitalograph spirometer” to measure the participants’ breathing.

Every 2 weeks, they hooked the men and women up to this machine and put them through a series of breathing exercises to see if this breakthrough was working. After just 2 weeks, the doctors noticed something surprising.

## The people getting the rare plant extract were getting a significant improvement in nearly every single one of their measurements...

Including their ability to take **deep, controlled breaths**... Exhale forcefully... And **breathe more easily**.

But, after 6 weeks, things really took a turn... See, the men and women who got this breakthrough saw up to a dramatic **57% increase** in forced expiratory flow, or FEF75... This is the amount of air exhaled forcefully and quickly when you’re 75% of the way through your breath. It shows **improved oxygen flow** throughout the lungs and it means...

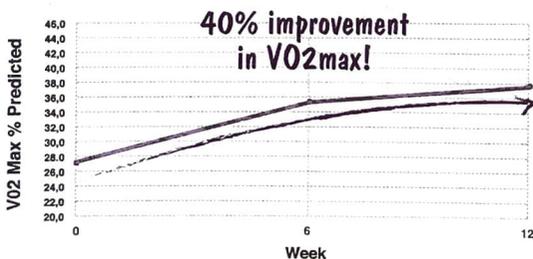

**Their lungs were stronger than before.**

As a Medical Doctor, I can tell you these results aren’t just impressive... *They’re potentially life changing.*

Imagine being able to take in more air when you breathe... Experiencing the **clear, effortless breathing** you used to have... **And feeling confident in the health of your lungs.**

But we’re just getting started... Because the men and women taking this breakthrough also saw an amazing **40% increase** in something called “maximum voluntary ventilation”...

This is the amount of air that’s exhaled over the course of 12 seconds... It means they could take deep, full breaths with more oxygen.

But, still, we’re not done yet... Because then there was one final measurement. It’s something known as VO2max. VO2max is a measurement used to show the maximum amount of oxygen the lungs can take in and use during exercise. This is especially **important** because...

## A high number in VO2max means more energy, longer endurance...

And the ability to walk, run, and move like you want to throughout your day... *Without* getting out of breath or feeling tired.

But a low number means taking more shallow breaths... getting winded or short of breath more easily... And making you feel tired and worn out. Which is why I’m so excited to share these final study results with you...

See, after 12 weeks, volunteers aged 26-80 taking this lung-improving breakthrough saw an **incredible 40% improvement** in their VO2max.

They started with an average score of just 26.7... And the average age of the study participants was 62.

To put that in perspective, 26.7 is considered “average” for seniors. While anything over 37 is considered “excellent.”

Well, after taking this rare plant extract, their average score increased to an incredible 37.5. Remember, anything over 37 is “excellent”.

That means they went from taking in an average amount of oxygen... To taking in an exceptional amount.

In fact, their new VO2max numbers were equal to the average VO2max numbers of someone in their 40s!

Friend, **are you starting to see how life-changing this breakthrough could be for you?**

Okay, I’m sure you’re dying to know... What exactly *is* this lung health-improving plant extract? And how can you get your hands on some?

In Asia, there’s a rare type of plant that’s known for its health-giving powers. This plant is called **Insam**. For the last 2,000 years, it’s been a staple in the Asian culture. They use it to support and strengthen their lungs. And the way it works is **genius**...

See, as you heard earlier, the alveoli in your lungs work like a balloon to pull in air and circulate it throughout your body. The respiratory muscles create the negative pressure to allow this.

Doctors call the function of the respiratory muscles respiratory muscle contractility (or RMC). When you and your

lungs start to age, you could have a lower RMC. Your lungs no longer pull in air or push it out as well as they used to.

Well, in one study testing Insam's lung-improving power on athletes... Insam was shown to increase RMC. Meaning...

## **Insam helped improve the strength of the respiratory muscles and the elasticity in your lungs**

There's never been anything like this before... However, you might be wondering... "*If Insam works so well... why haven't I heard of it?*" Or better yet... "*Why hasn't my doctor told me about it?*"

Well, believe it or not, there's a good reason... You see, the study I mentioned earlier was buried on page 242 of the journal it was published in. I don't know many people who read 5 pages of these journals, let alone over 240. Not only that, but it was an international health journal... So, unfortunately, not many people here in the U.S. were paying attention. And, judging by the lack of media coverage about this solution, they just plain missed it. But I was paying attention...

## **I searched for a remedy containing Insam—something I could recommend to my patients**

I looked everywhere... But I didn't find a single formula with the correct dose, in the clinically studied form. See, it turns out you need to use the clinically studied dose of Insam. Otherwise, you couldn't expect the results from the study.

So I decided to take matters into my own hands. I used my insider access in the health community to secure a supply of the exact, clinically studied dose of Insam... The kind that improved breathing by up to a remarkable 57%... And improved one marker of lung health to be equal to that of a healthy 43-year-old... And included it in the lung-improving formula I call **Respinox**™.

**Respinox** has the exact right dose of the highest-quality Insam—just like the stuff used in the study in Israel.

You see, in addition to working as the lead doctor at my clinic... I'm also the Chief Medical Advisor for a small, family owned company called **Solaire Nutraceuticals**. My team and I have been working to develop a nutritional formula that brings together everything you need to help support healthier lungs...

**Respinox** is ONLY available through this presentation. If you're reading this presentation right now, it means we've

reserved a small supply of **Respinox** for YOU. We're just waiting for you to tell us where to send it.

And, I want to assure you, at Solaire Nutraceuticals, we hold our formulas to the **highest quality** standards. Every bottle of **Respinox** is produced in our CGMP-certified facility. That's how we personally inspect each formula before it goes out.

However, that also means we're only able to produce **Respinox** in small batches... Which means supplies are extremely limited. In fact, we've already sold out once. And, when that happens, it can take months for us to get more in stock.

So if you want to secure your supply of the lung health-improving formula Respinox... And be on your way to stronger, healthier lungs... **You must act fast**.

Before we get there, however, there's one more thing I need to tell you. See, most of my patients don't just complain that they don't breathe as well as they used to... When my team and I created **Respinox**, we wanted to create the most complete lung-improving formula on the market.

So we included a second powerhouse ingredient to help open your airways wide.

If you're health savvy, you've probably heard of **inflammation**. Now, believe it or not, **inflammation is actually natural and healthy**... as long as it's kept in balance.

Imagine a tube running from your throat down into your lungs... Every time you take a deep breath, air runs through that tube... When you have a healthy inflammatory response, the tube is **free and open**—and you're able to breathe with ease. And here's the good news...

## **It's now possible to help promote a health inflammatory response in the lungs**

Which is why—when my team and I developed my lung-improving formula **Respinox**—we knew we needed to include something that helps promote a healthy inflammatory response.

The secret comes from a weird fruit called **Sour Melon**. Sour Melon is known as **nature's antioxidant**. It's packed with molecules called gallic acid esters... Which work to help **promote a healthy level of inflammation**.

In fact, in one study, Sour Melon improved CRP—a key marker of inflammation—by **45%**. Another small study—published in a leading healthcare journal, *The Journal of Herbal Medicine*—confirmed Sour Melon's **lung health-improving power**.

next page please >>>

The study was double-blind and placebo-controlled... Which is the **"gold standard"** of scientific research. In order to qualify, participants had to have less than optimal lung health. So you can imagine how astonished doctors must have been when after just 60 days, people taking Sour Melon experienced an improvement. To start...

## They saw an incredible 52% reduction in their coughing

But the results these subjects reported get even better... Because the participants' **shortness of breath fell by 22%**...

Not only that, but their ability to **fall asleep—and stay asleep improved by 40%**... And, with all that extra sleep, they also reported feeling **48% less tired**.

## What would you do if you suddenly felt better... MORE ALIVE?

Imagine how much more **productive** your days could be... And how much more **excited** you'd feel for the fun days ahead.

And just so we're clear: The results these men and women got were **27% better** than the people who didn't take Sour Melon. And remember: these incredible results were after just 60 days. **Are you starting to see how this could finally be the key to keeping healthy lungs?**

I'm so excited for you to know how it feels to take **deeper, more relaxing breaths**... **Breathe easier**... And feel like you have healthier lungs.

As I mentioned before, Sour Melon is the 2<sup>nd</sup> powerful ingredient in my lung-improving formula: **Respinox**.

I need to tell you one more **surprising** benefit people saw when taking Sour Melon. See, you may know that your lung health and heart health are closely related. In fact, your lungs are known as an **"early indicator"** of your heart health.

Meaning it's a good idea to start giving your heart the support it needs too. Which is why I'm excited to tell you that...

## Sour Melon can support your heart health and improve even more of your key numbers

In a groundbreaking study, Sour Melon **lowered Total Cholesterol by 12%**... LDL Bad Cholesterol **fell by 18%**... HDL Good Cholesterol went **up by 8%**... And **triglycerides dropped 12%**.

Can you imagine... not only **strengthening** your lungs, but **improving** your heart health as well? Imagine, at your

next regular check-up, seeing the look on your doctor's face when he says your lungs—and heart—are **healthier!**

When you combine Sour Melon—to promote healthy inflammation... and open your airways... With Insam—also known as panax ginseng... To help **give you stronger lungs**... And **improve your breathing**...

## You finally have everything you need to help make your lungs healthier than ever

Friend, this is the most complete lung formula I've ever seen. In fact, it's the **ONLY** formula I've seen to include clinically studied doses of both lung-improving ingredients Insam and Sour Melon. And, remember: It's **only** available through this presentation.

But before I show you how to claim your own supply, however, let's quickly recap everything we discussed today.

First, I showed you how it's now possible to help make your lungs stronger and healthier. Then, you saw how the alveoli in your lungs work like tiny **balloons**... And how your alveoli can lose their elasticity with age—affecting our ability to breathe easy or take deep breaths like we used to.

Then, I showed you how the natural Asian plant—Insam—was shown in one study to **increase that strength**... **Improve breathing by up to 57%**... And make one marker of lung health as **healthy as a 43-year-old**.

Plus: you saw how Sour Melon promotes healthy inflammation—and helped reduce shortness of breath... And even helps support your heart health.

Finally, I showed you how I combined both ingredients into a single formula called Respinox. **Keep reading** for your opportunity to reserve a small supply.

**Respinox** is one of our most popular formulas. And our supplies are extremely limited. In fact, we've already sold out once. **And I fully expect to sell out again**.

So, if you want to **improve your breathing**... **Open up your airways**... And help enjoy strong, healthy lungs... You'll need to act **quickly**.

I recommend picking up **AT LEAST** a 3-month supply today. That way, you'll always have a bottle of **Respinox** on hand... And you'll never need to worry about running out.

And no matter how many bottles you claim today... You can rest easy knowing your entire purchase is covered by **the most generous money back guarantee** you'll ever see.

Here's the deal... On the back of this booklet, you'll find easy instructions on how to secure your own supply. Once

you do, in a few short days, a plain package should appear containing your initial supply of **Respinox**.

It couldn't be easier—it's just 2 small capsules a day. **Continue taking Respinox** as directed... And **do nothing else**.

Within the first few weeks, you could notice your breathing has improved... **You could be able to take deep-relaxing breaths** more easily than you used to.

## **You could fall asleep more quickly— and stay asleep for longer**

You could wake up with more **energy, zest, and excitement** to take on your day... And you could notice you **don't get winded or fatigued as easily**.

But that's just the start... Because, after 6 weeks, you may notice what I call **"the magic moment."** That's when you wake up one morning, take a **deep breath** of fresh air... Smelling the flowers in the garden in your front yard... And, as you go about your day, you don't give your breathing a second thought. And that's when you realize, **"This is it. My lungs are healthy and I feel great."**

But you know all you did was take 2 tiny Respinox pills each morning—and it did all the work for you... **Giving you stronger, healthier lungs.** And here's the best part... If **Respinox** doesn't work exactly as I've promised today... Or if you're not satisfied for any reason... I insist you give me a call and I'll send you a **full and courteous refund**. It's all part of my **100% Money Back Guarantee**. That's how confident I am that this will work for you.

But remember: **Respinox** is **ONLY** available to people reading this presentation right now. And once we sell out: That's it. **It could be months before we have any more in stock.**

Look, the way I see it, **you're standing at a crossroads.** On the left is option 1. Which is, do nothing... You could continue **with lungs that continue to get older each year**... Getting winded during a game of catch with your grand-

kids... Letting your aging lungs **get in the way** of truly enjoying what should be the best years of your life... All the while knowing you had a chance to do something about it and you let it slip away.

That's why I recommend option #2: the **"done for you option."** Simply **turn to the back page now** and choose a better future.

## **With Respinox, you can have the opportunity to take one deep, relaxing breath after another...**

Enjoying all the **youthful energy and freedom** that comes with it... Friend, the choice is yours... I know you'll make the right one. Remember: Here's everything you get when you say **"Yes!" to trying Respinox** today...

You get the full, clinically studied dose of Insam, also known as ginseng... The natural Asian plant extract that works to **improve the strength in your lungs... Improve breathing by up to 57%... And make lungs strong and healthy.**

Along with Sour Melon, also known as amla,—to promote healthy inflammatory balance in your lungs... opening your airways.

All backed by my **100% Money-Back Guarantee**—so you take **ZERO risk at all.**

Just **turn this booklet over** and I'll see you on the next page.

There's no reason for you to not give **Respinox** a try today. Simply mail back the form on the next page or for faster service call **1-855-303-2430.**

Sincerely,

Dr. Richard Gerhauer  
Solaire Nutraceuticals
