WARNING: What you're about to see is a controversial presentation from one of the world's leading technology analysts. You're going to discover shocking facts this analyst learned from a private meeting he attended with billionaire Elon Musk. The following was never meant to be shared with the general public. For that reason, this message could be pulled offline at any moment. Watch in full while this man's controversial prediction is still available in its original, uncensored format.

TOP TECH INSIDER shares details of a Private Meeting

What Elon Musk Revealed in Private Will Change Our Country *FOREVER…*

Dear Reader,

This is urgent, so I'll be direct…

What I learned during a closed-door meeting in Washington, D.C. — less than a mile from the White House — with billionaire Elon Musk…

Could soon change everything you know about making money in the coming months.

This meeting was never reported on by the press…

In fact, only a small number of insiders — including myself — were able to attend.

And During the Meeting, Elon Discussed Silicon Valley's Next TRILLION-DOLLAR BREAKTHROUGH…

One I believe could have a far bigger impact on the world than any other technology we've seen before.

And Before You Start Guessing, What Elon Shared Has *Nothing* To Do With Tesla…

In fact, the breakthrough he detailed has *nothing* to do with electric cars at all…

It's also *not* about solar energy…

And it has nothing to do with his previous banking breakthroughs like PayPal either…

It's far bigger than any of those things.

That's because this latest breakthrough could dramatically change our way of living — and even America's future — forever.

50 years from now, people may remember it as one of the greatest innovations of the 21st century.

And according to my research, one company could reveal this breakthrough to the public just days from now.

And when it is shared with the world, the impact will be immediate.

Iconic American companies you almost certainly do business with could fall into bankruptcy…

Companies like Verizon, Sprint, AT&T, T-Mobile and more…

All could soon go kaput.

At the Same Time, the Technology Elon Talked About Will Help Millions of Americans, Including You, Save Thousands of Dollars Every Year…

And, most importantly, it could change the way we live our lives — from where we vacation to how we interact with friends and family.

It's comparable to the rise of the internet or the smartphone…

Those two innovations, as you know, created trillions of dollars in wealth and improved our lives.

And what Elon shared is no different.

In a moment, I'll tell you what Elon Musk talked about…

I'll share pictures of the technology…

I'll prove to you why this breakthrough could change everything about our way of life — from how we shop… to how we travel… to how we conduct business…

Down to a personal level, too… changing how we interact with our friends and family.

I'll reveal why I'm convinced his discussion confirms this as the greatest innovation of the 21st century…

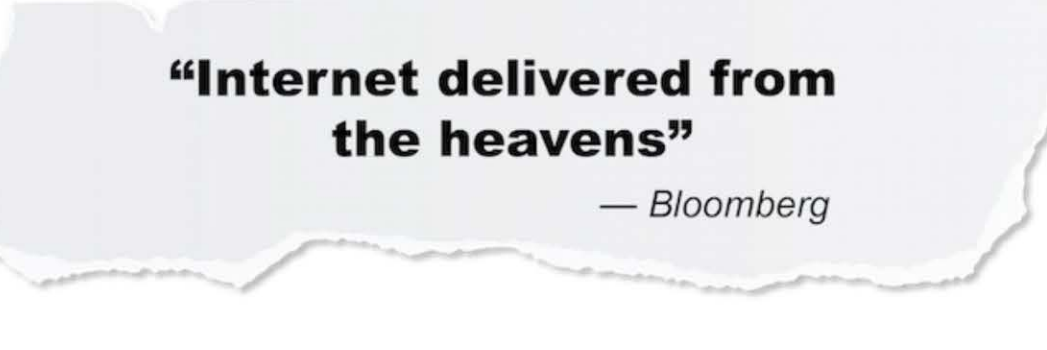
And, as one of the world's leading technologists… I'll also give you an inside track to investing in this breakthrough tech…

Where a small starting stake could return investors incredible profits starting as soon as June 7, the date I expect a major player will reveal their plans to the world.

Let me show you what's going on…

A Radical New Way of Delivering High-Speed, Unlimited Internet to the World… for Just a Few Dollars a Month

As *Bloomberg* reports, this new tech Elon discussed could be nothing short of…



"Internet delivered from the heavens"

— Bloomberg

We may be just days away from an entirely new era of modern internet…

One that will deliver high-speed internet to everyone worldwide…

Without requiring a modem, towers, cables or anything like that.

Maybe you've been hearing about 5G recently, and how big of an impact it'll have.

CNN says 5G will be "the lifeblood of the new economy."

The Wall Street Journal declares its impact will be "felt around the world."

Even Donald Trump says 5G "will transform the way our citizens will work, learn, communicate, and travel."

The truth is, as I'll show you in a moment, this brand-new technology could be…

Bigger…

Better…

Faster…

Even *safer* than 5G.

When it's first revealed to the world, it'll completely revolutionize the internet.

And as I discovered…

Elon Musk Isn't the Only One Working on This Breakthrough Tech

Amazon CEO Jeff Bezos is going "all in" on this coming tech, too…

And he's not alone, either…

Google has also invested $900 million and counting.

And in a Shocking Twist… After This Meeting With Musk… I Learned He's Even Late to the Story!

Because it doesn't seem to be Musk who's powering this new revolution…

The race may have already been won…

And as soon as June 7, 2021, the world may know the winner.

Because…

It Looks Like Apple Inc.'s Already Made Moves To Secure Secret Patents… Beating Elon at His Own Game… Are They About To Go Public With the Info?

And now, according to my research…

Apple may have beat Elon at his own game to deploy their version of this technology.

Because…

On June 7 a team of engineers could be preparing to go public with a massive disruption to the internet… and to American life itself.

The last time Apple revealed an innovation like this — the iPhone — it revolutionized the world…

Overnight, Apple's release of the iPhone gave birth to what's now the $478 billion-a-year smartphone industry…

Investors who positioned themselves ahead of the iPhone's reveal scored life-changing gains…

And today, the same situation is playing out yet again.

I've Never Seen Anything as Disruptive or Revolutionary as What You're About To See

And get this…

While the world's biggest companies…

And the world's wealthiest billionaires…

From Musk…

To Bezos…

To the execs at Apple Inc.…

Are all placing their own money behind this coming technology…

You've almost certainly heard nothing about it.

But when this is presented to the world as early as June 7, it could change everything you know about the internet.

Not until now, at least.

I should warn you now, though… nothing about June 7 is written in stone, nothing is guaranteed, and any announcement may not happen until far off in the future.

But if my research is correct and what I predict does happen, those who act fastest could reap the biggest rewards.

And for investors who get in now, the potential rewards are incredible.

I've created this urgent presentation (which could be removed at any moment) to show you how I expect this situation will play out…

Why it'll have the biggest impact of any breakthrough in the past decade…

And how you can get in on this revolutionary breakthrough alongside Apple Inc., Elon Musk, Jeff Bezos, Google and other top tech insiders.

If you missed out on the rise of the internet or the smartphone, you can't afford to miss this…

It could be the last chance you'll have to get in on a story of this size.

After all…

History Shows That Situations Like This Are When Everyday Folks Have The Rare Shot At Getting Extraordinarily Rich

Anytime the stakes are this high…

Where trillions of dollars hang in the balance…

When technologies can pioneer a whole new future…

While, at the same time, sending other technologies… even whole companies… into an early grave…

Folks who recognize what's happening, and take action, can pocket extraordinary profits.

See, each time a situation like this happens…

Enormous amounts of money are lost by those who don't see what's happening, as old technologies become obsolete…

And, more importantly for you…

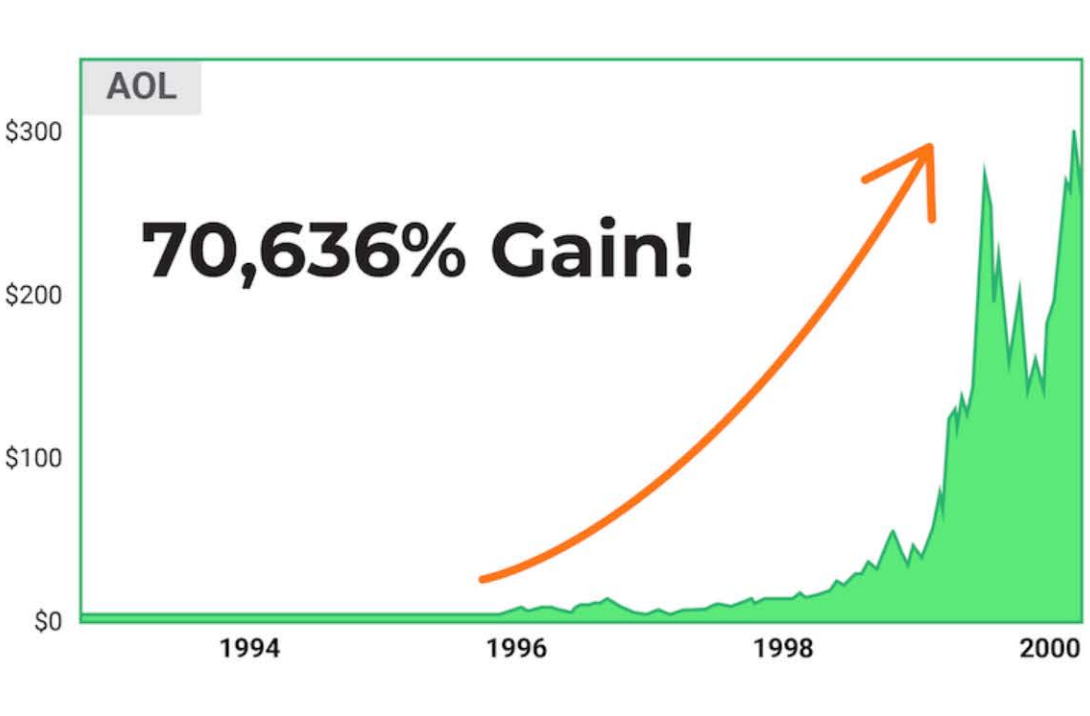
Massive amounts of money are made by those who see what's coming ahead of time.

And Mark My Words: What's Coming Next Is a *Radical New Internet*, Powered Directly By Apple, Inc.

What type of gains can investors expect to see this time around?

Well, let's take a look at what the first introduction of the internet did for early investors…

After AOL introduced internet via dial-up connection, for example…



Their stock soared a rare, massive 70,626% over 6 years.

Just think about that…

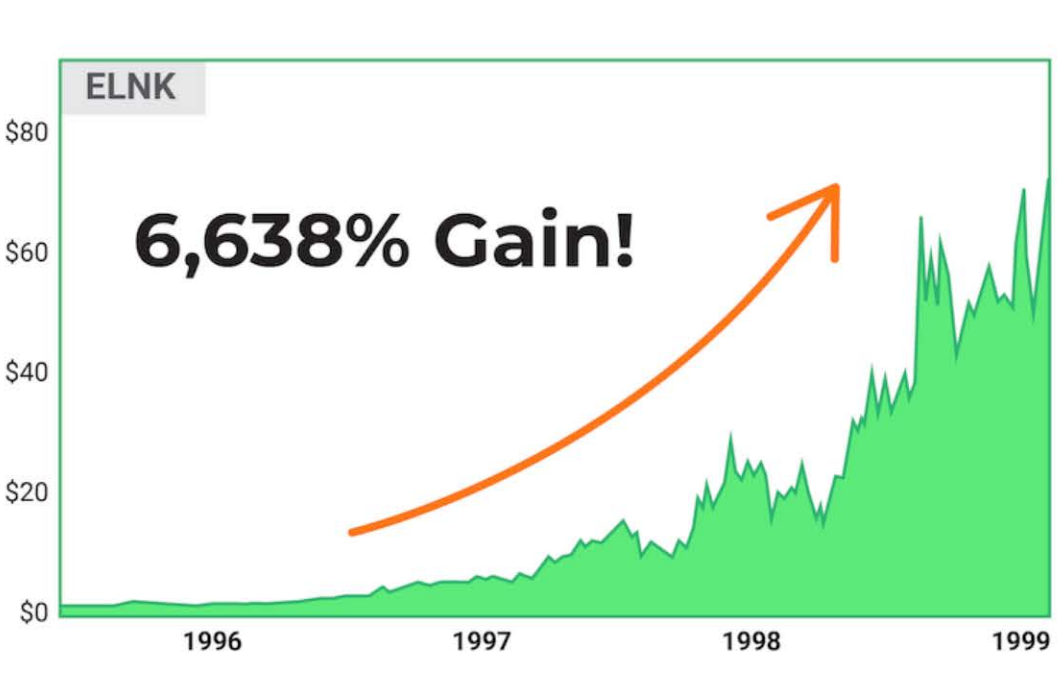
That turns a $1,000 stake into $700,000… or a $10,000 stake into more than $7 million.

What would your life look like with a $7 million fortune?

It'd be a lot different, needless to say.

Same thing with the company EarthLink.

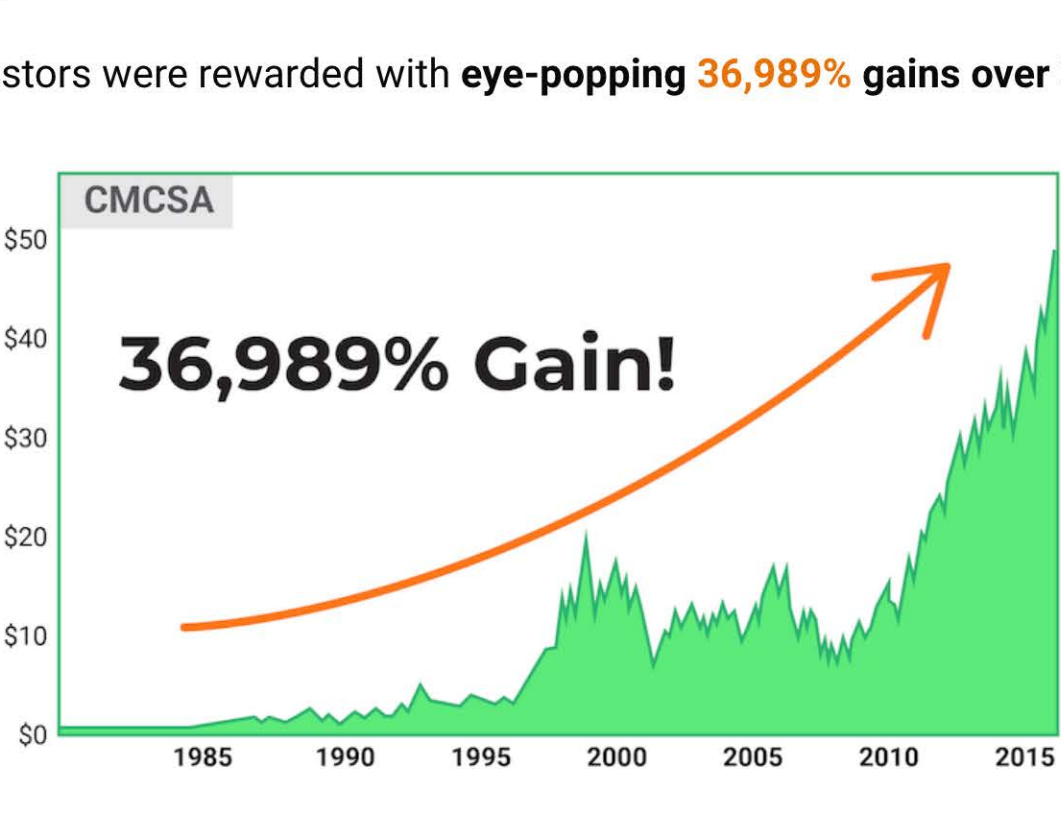
When they helped usher in the age of DSL, changing how people received internet… **their stock shot up 6,638% over the next 3 years.**



Again with Comcast.

As cable internet came and replaced DSL throughout the country, revolutionizing the internet yet again…

Comcast investors were rewarded with **eye-popping 36,989% gains over 30 years.**



The same situation has played out over and over again throughout history…

Whenever the internet takes a huge leap forward…

Over time, untold amounts of wealth are made by investors who see it coming ahead of time.

Which is why I'm sending you this urgent message today.

Just days from now, Apple Inc. — the world's largest company — could be preparing to go public with the biggest internet breakthrough of our time.

I'll be showing you the undeniable proof in just a moment…

I'll even show you exactly how to get in front of this "Apple-Fi" revolution…

If you missed out on the years it took to rack up AOL's rare **70,626%** gain… ELNK's **6,638%** gain… or CMCSA's **36,989%** gain… you aren't going to want to miss this.

The potential rewards for investors who get in now are so incredible… that you'll have to see this to believe it.

Let me show you what's going on…

Is Apple Inc. Planning To Revolutionize The Internet As We Know It?

You have, of course, heard of Wi-Fi.

It's what connects your devices — your computer or phone — to the internet.

Simply put, Wi-Fi is the backbone of the internet.

Without it, the internet wouldn't be possible.

Well, starting just days from now…

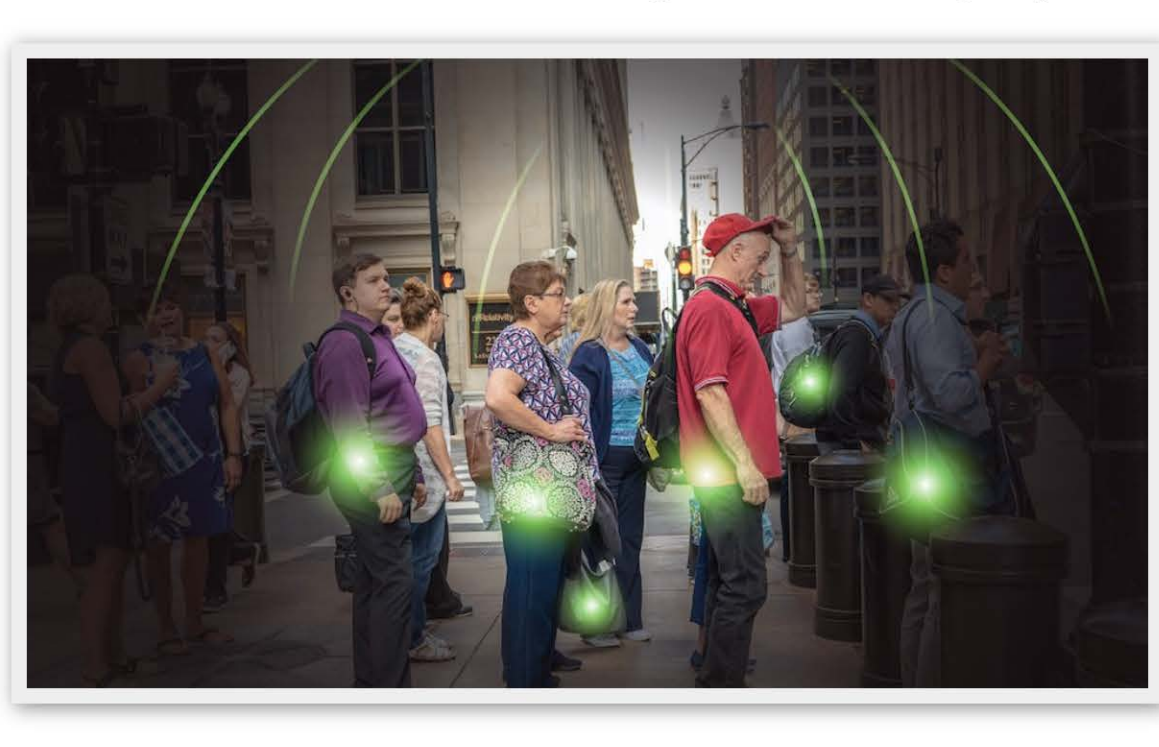
I believe Apple Inc. is planning to announce a radical change to Wi-Fi… and to the internet itself.

Introducing The Next Tech That Could Change The World — I Call It "Apple-Fi"

What is "Apple-Fi"?

In short, Apple will soon cut out traditional wireless networks and internet providers…

And beam fast, reliable, unlimited internet through the air… directly to your device.



No more cell towers… and no more routers.

Instead, high-speed internet will simply be beamed straight to your device, at all times.

Whether you're walking down Fifth Avenue in Manhattan or in a remote rural cabin, you'll always be connected to high-speed internet.

The most shocking part of all this?

Well, judging by similar Apple products…

Like Apple TV, which costs $4.99 per month… and Apple Arcade, which again costs $4.99 per month…

"Apple-Fi" may cost you just $4.99 per month.

That's right.

While other internet services like Verizon and AT&T charge an average of $132 or more per month…

Starting just days from now, you — and everyone else around the world — could be able to slash your bill down to as little as $4.99 per month.

"Apple-Fi" Could Be the World's Cheapest, Fastest, Most Reliable Internet EVER

Never before have we seen such a drastic change to the internet like this…

Because of the way this new technology works (which I'll show you in just a moment…)

You may never have a dropped call again…

There'll be no more saying "can you hear me now?"

Instead, you'll always receiving high-speed internet, uninterrupted, unlimited internet… everywhere you go.

We're talking total coverage around the world…

From Wall Streeters in Manhattan, NYC…

To vacationers in Paris, France…

To workers in the world's most remote farms…

To the poorest African villages.

All of this with NO roaming fees.

And at a flat price of just $4.99 per month, you could save hundreds of dollars every month on Wi-Fi… extra money you can use for whatever you'd like.

That's Right… "Apple-Fi" May Deliver High-Speed Internet, Everywhere In The World, For Up To 90% Off

It doesn't take a genius to figure out that having 90% cheaper…

Faster…

Total coverage service…

With no roaming fees…

Will cripple the nearly $251 billion cable industry here in America overnight…

Things you're seeing on the news, like 5G, could become obsolete in an instant.

There will be no need for 5G anymore — it simply can't compete with "Apple-Fi".

No need for unsightly towers and transmitters popping up in your neighborhood, either.

If "Apple-Fi" is able to work without cell phone towers…

For Consumers Like You And I, "Apple-Fi" Will Be A Godsend. For Old Network Providers, It's A Nightmare.

Odds are, if you're like me, you do business with companies like AT&T, Verizon, Sprint, T-Mobile, or others to receive internet and phone service.

And odds are you've had a negative experience with them…

For instance, did you know that here in America you're paying more than any other country… for internet service that ranks among the slowest in the world?

Now compare that with socialist Venezuela…

Eight out of 10 people in the country don't even have enough money for food, and yet their mobile internet speeds are twice as high as ours.

The average American today pays $132 for their service… service that's among the slowest in the world.

Compare that with South Korea, where folks pay just $20 per month for speeds five times faster than ours.

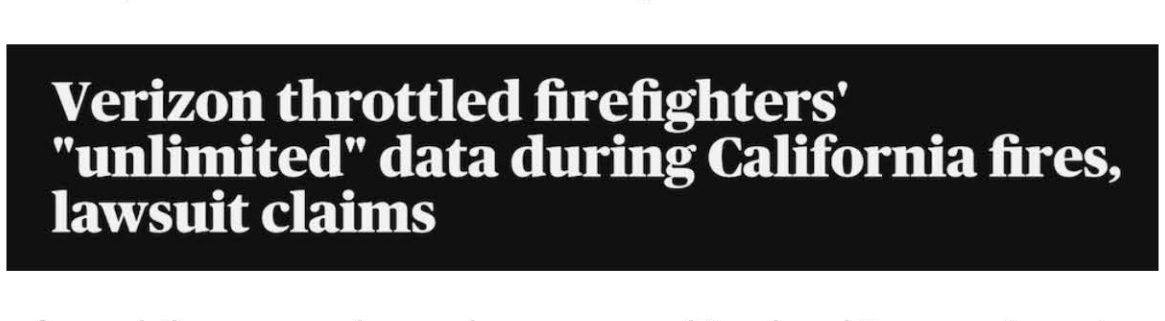
News came out recently that Comcast is raising costs of their service at 4 TIMES the rate of inflation.

Does that seem fair to you?

Comcast isn't even the worst of these companies…

Take Verizon, for example…

News recently came out that during one of California's worst wildfires, fire department's — who rely on the internet to track fires — experienced significantly slowed service as Verizon cut their speeds to 1/200th of what they were.



Verizon throttled firefighters' "unlimited" data during California fires, lawsuit claims

Verizon then forced these people — who were working hard to save American lives — to pay twice as much to resume normal service.

It's criminal.

Luckily, thanks to Apple, we could be just days away from this finally being a thing of the past.

In fact, as soon as June 7, you may never have to give them a cent of your hard-earned money.

The release of "Apple-Fi" could cripple these companies…

Why would you, I, or anyone else pay the average $132 per month…

When "Apple-Fi" could provide far better, faster, unlimited internet service, perhaps for just $4.99?

Verizon, AT&T… they simply won't be able to compete.

For Apple, This Rollout Of Worldwide Wi-Fi Will Be A Bonanza

You see, as I write to you, Apple has a market cap of $2 trillion.

To put that into perspective, that's just shy of the entire nation of Canada's GDP.

But as big and famous as they are… they've still only scratched the surface in terms of growth.

That's because, according to recent reports, Apple sells about 36 million iPhones every year…18.2 million Mac computers… and 44 million iPads last year alone.

This is what makes them a powerhouse… **generating $260 billion in revenue annually**.

But in the past Apple's pointed everyone of those iPhones… every one of those iPads…

To someone else's telecom network!

That means places like Verizon… AT&T… Sprint… T-Mobile…

Have ALL sucked up monthly revenue from their subscribers using Apple's products.

"Apple-Fi" Would Redirect All Of That Spending Directly Into Apple's Pockets

If able to deploy unlimited, high-speed internet to all of their devices …

Millions of people would switch over from Verizon… AT&T…Sprint… T-Mobile…

Directly to "Apple-Fi"…

Which could promise TOTAL worldwide coverage…

"Internet from the Heavens" as Bloomberg described it…

For cheaper and faster than any existing network.

It's a win-win for Apple and the consumers like you and I.

And as mentioned, according to my research, the reveal of this may come as early as June 7.

This could go down as the biggest market story of 2021…

It's a worldwide revolution with billions of dollars at stake.

And in just a moment, I'll show you exactly how to play it…

The last time Apple made a huge move like this, with the iPhone, it made hundreds of billions of dollars…

Today, I believe the same situation is playing out yet again…

Only this time, you can be along for the ride.

If you've ever kicked yourself for missing out on being one of the early investors in the iPhone, this could be your chance to make up for that.

But it's important that you get in BEFORE June 7…

When I expect the rest of the world will catch on and the biggest money will have already been made.

In just a moment, I'll show you everything you need to know to stake your claim before June 7.

While everyone else is blown away by this announcement… while the media is stunned, replaying clips and discussing the implications…

You'll be popping the champagne.

And you should know… this wouldn't be the first time Apple's upending existing industries…

The Truth Is, Apple Has Been Following This Playbook For Months Now, Launching Service After Service…

Apple Music, Apple TV, you name it…

As *Bloomberg* reports, for years now Apple has been quietly transitioning from a hardware company — selling devices like phones, computers, and tablets…

Into a service company — offering music, TV, even credit cards.

They're completely reinventing their business to better serve consumers.

But this time, with "Apple-Fi," they're going all-in on their biggest innovation yet…

A project that would be larger than anything they've done since the launch of the iPhone…

One that will completely revolutionize how the world receives internet… and disrupt the $260 billion cable industry.

It's a win-win for everyone…

I predict Apple could invest tens, or even hundreds of billions of dollars to rollout "Apple-Fi"…

To redirect the revenue of Verizon, AT&T, Sprint, T-Mobile… all into their pocket.

At the same time, consumers win big too…

They could save thousands every year by slashing their monthly service bill all the way down to just $4.99.

But here's what really makes this technology so incredible…

A Radical New Way Of Beaming Internet Directly To Your Device

For "Apple-Fi" to be a no-brainer to consumers like you and I…

And to ensure other companies like Verizon, AT&T, and Sprint can't compete…

It's clear "Apple-Fi" would have to be much cheaper than what you're currently paying now.

But there's a catch…

If they wanted to make "Apple-Fi" available at the ultra-low cost of just $4.99 per month…

Apple likely realized they had to completely reinvent how the world receives internet.

As you may know, there are a few big problems with how we receive cell signals and internet coverage.

First, while a lot of people are excited about 5G as the future, the truth is deploying it is costly and takes years.

Second, because the average 5G tower only works within 1,000 feet or so, to deploy it nationally requires tens of thousands of these towers to be installed.

And that, as you can imagine, costs hundreds of billions of dollars… maybe even more.

Finally, nearly every other cell signal and Wi-Fi signal work the same way — they're all *local* solutions with limited range.

If you move out of range, well…

- That's why you lose the internet
- That's why you drop your call, to be left asking, "can you hear me now?"
- That's why it's nearly impossible to get reliable service in remote areas

So it doesn't matter how fast things like 5G technologies are…

If they're all *local* signals where you have to be in range to gain access.

FORGET Ever Having Local Coverage… Because "Apple-Fi" Could Come With Worldwide Coverage

So "Apple-Fi" began with a simple question…

What if Apple could just eliminate the need for any kind of tower at all…

And instead beam internet straight through the air, directly to your device?

It would be cheaper and easier to deploy… and also bigger, faster, better, even safer than 5G.

Incredibly, that's exactly what Apple may be planning to do…

Internet Delivered To You From The Heavens

As you're about to see, they've quietly pioneered plans for a constellation of highly-advanced satellites…

Satellites to beam uninterrupted, high-speed internet from space directly to your Apple device.

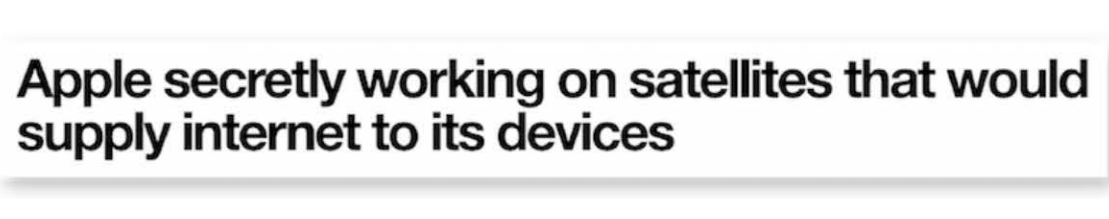
No need for a router… or anything like that.

And under this plan, cell towers simply aren't necessary anymore either.

Instead, high-speed internet will simply be beamed from space, through air, directly to your device.

Your device would simply always be connected to the satellites, everywhere you go.

Already, one mainstream media source is starting to catch on, saying…



Apple secretly working on satellites that would supply internet to its devices

It's that simple.

But, of course, I don't expect you to believe me on the surface…

After all, we've just met.

So now that you know what "Apple-Fi" is… and its full power and promise…

Let me present all the proof exhibits I've prepared during my research.

Once I do, I'll show you exactly how to get ahead of this "Apple-Fi" rollout…

AOL… ELNK… CMCSA… they all made early investors incredible profits with their innovations to the internet…

And "Apple-Fi" could have just as big of an impact — if not bigger — than these companies did.

It'll revolutionize the internet for good.

And the amount of money I predict is at stake, as you'll see, is incredible.

As I show you this proof I've gathered, you can decide for yourself if you want to ride along as Apple shocks the world again…

Or if you think I'm full of hot air and empty promises.

It's your choice to make.

Sound fair enough?

Then let's get right into it…

PROOF:
EXHIBIT A — Apple's *Already* Hired The World's Best Satellite Engineers

Of course, Apple can't just launch a bunch of satellites instantly…

They needed the expertise to make it happen.

And quietly, over the past few years, Apple's sucked up all the most talented engineers in the world…

- To lead the team pioneering "Apple-Fi," Apple hired Michael Trela and John Fenwick, two world-famous aerospace engineers who were part of one of the top satellite companies in the world
- They also hired Matt Ettus, one of the foremost names in wireless technologies, to guide the company in delivering "Apple-Fi" to all their devices
- Apple also hired Ashley Moore Williams, previously from Aerospace Corp., focused on satellites…
- And they hired Daniel Ellis, one of the world's top experts on building networks that can beam content

The team is now in place.

But then, Apple needed the patents to protect the team's work…

And that's now in place, too…

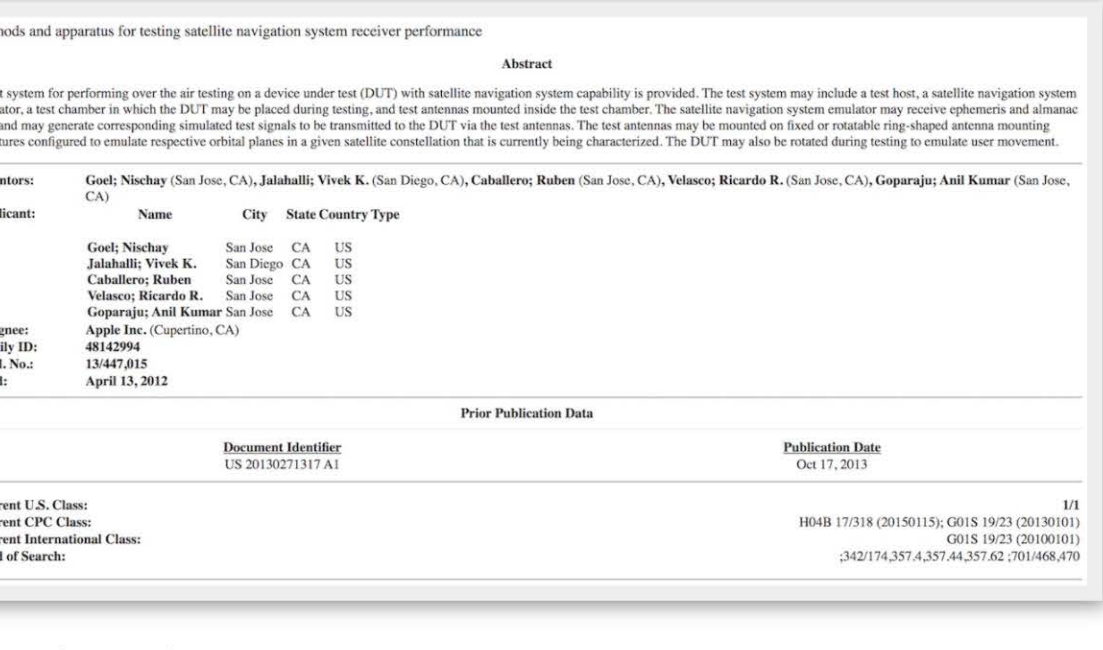
PROOF:
EXHIBIT B — Apple's *Already* Quietly and Secretly Secured Their Patent Portfolio

Do the following numbers mean anything to you?

US 20130271317 A1

If you're like most people, those numbers are nothing more than a string of nonsensical digits…

But for Apple, they're the identifier of their satellite navigation patent, seen here:



Methods and apparatus for testing satellite navigation system receiver performance

Abstract

A test system for performing over the air testing on a device under test (DUT) with satellite navigation system capability is provided. The test system may include a test host, a satellite navigation system emulator, a test chamber in which the DUT may be placed during testing, and test antennas mounted inside the test chamber. The satellite navigation system emulator may receive ephemeris and almanac data and may generate corresponding simulated test signals to be transmitted to the DUT via the test antennas. The test antennas may be mounted on fixed or rotatable ring-shaped antenna mounting structures configured to emulate respective orbital planes in a given satellite constellation that is currently being characterized. The DUT may also be rotated during testing to emulate user movement.

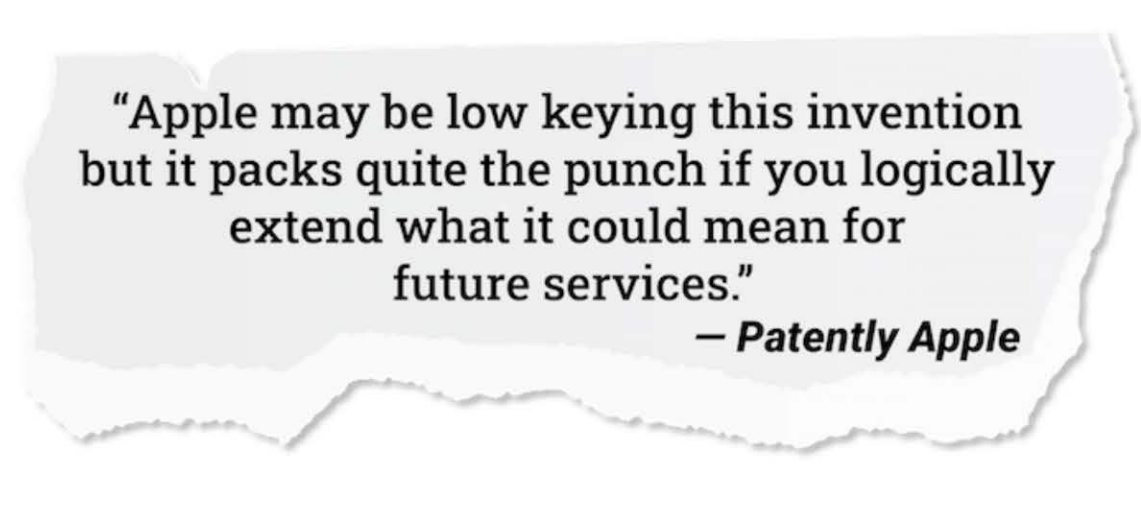
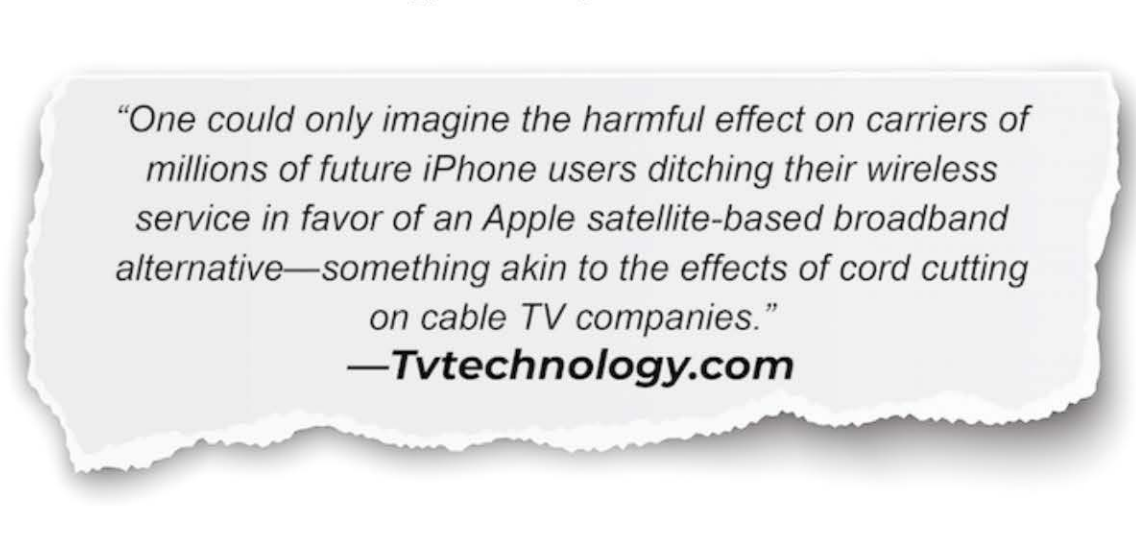
As the site *Patently Apple* reports…



"Apple may be low keying this invention but it packs quite the punch if you logically extend what it could mean for future services."
— Patently Apple

Perhaps, even, the knockout punch for the telecom giants of Verizon and AT&T…

That's why a site called *Tvtechnology.com* reported…



"One could only imagine the harmful effect on carriers of millions of future iPhone users ditching their wireless service in favor of an Apple satellite-based broadband alternative—something akin to the effects of cord cutting on cable TV companies."
—Tvtechnology.com

And there's more…

PROOF:
EXHIBIT C — Behind The Scenes, One of Apple's Potential Partners Has *Already* Filed Plans With The FCC To Launch Up To 3,000 Satellites

They've already filed plans with the FCC to launch between 1,400 and 3,000 satellites…

Once these plans are approved, they can begin the processes necessary to launch the satellites…

And potentially deliver internet to every Apple device in the world.

Until very recently, nothing like this was possible.

But thanks to several recent advances in satellite technology…

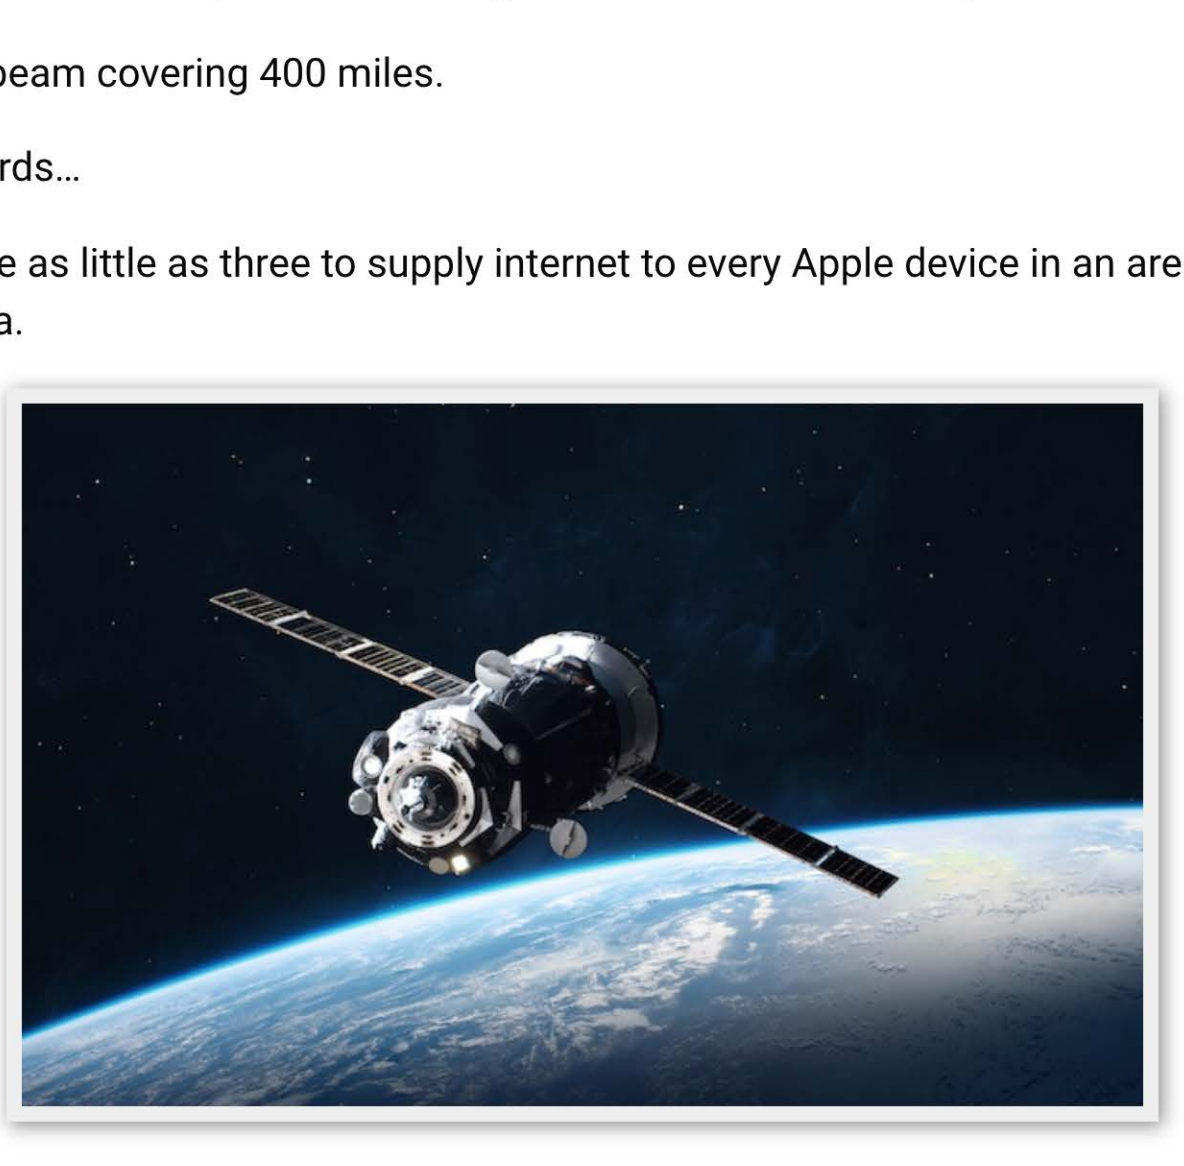
Satellites are more powerful than ever before… making an advance like "Apple-Fi" possible.

Similar satellites are capable of sending beams of internet directly to Earth…

With each beam covering 400 miles.

In other words…

It could take as little as three to supply internet to every Apple device in an area the size of India.



Once these satellites are activated, receiving "Apple-Fi" internet on your devices is easy.

No cables or modems are needed…

Your Apple device will automatically connect to the closest satellite…

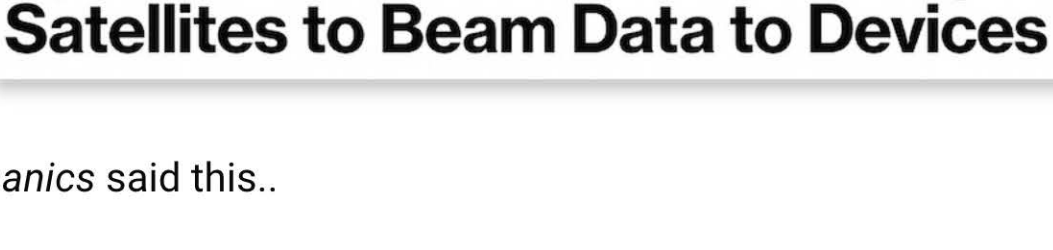
Which will beam unlimited, high-speed internet directly to you.

PROOF:
EXHIBIT D — Word About Apple's Secret Project is Just Now Starting to Leak to the Mainstream Press
(That Means You Only Have a Small Window Left to Stake Your Early Position)

When I started researching this story late last year, no one was talking about this…

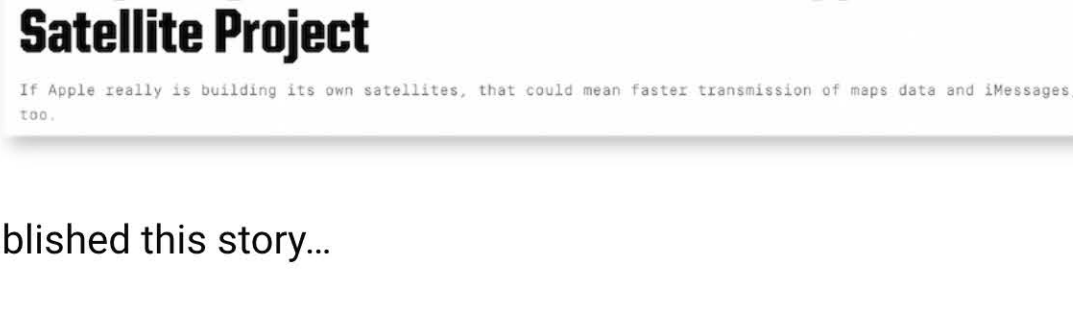
Now word's starting to leak out in the mainstream press… people are quickly catching on.

Bloomberg reports…



Technology
Apple Has Secret Team Working on Satellites to Beam Data to Devices

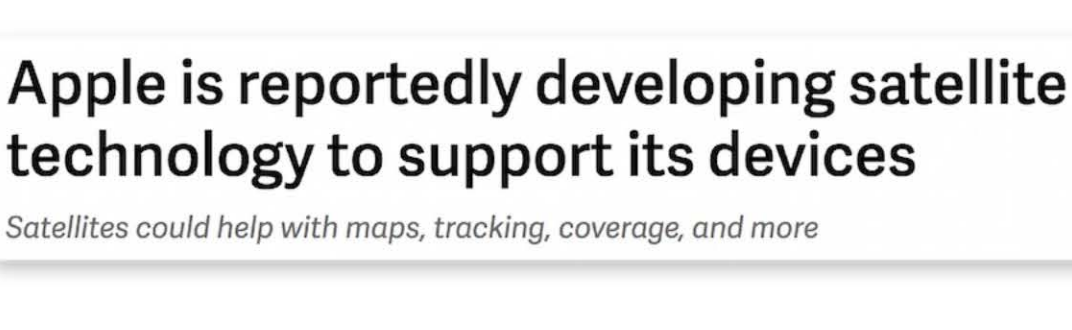
Popular Mechanics said this..



Everything You Need to Know About Apple's Secret Satellite Project

If Apple really is building its own satellites, that could mean faster transmission of maps data and iMessages, too.

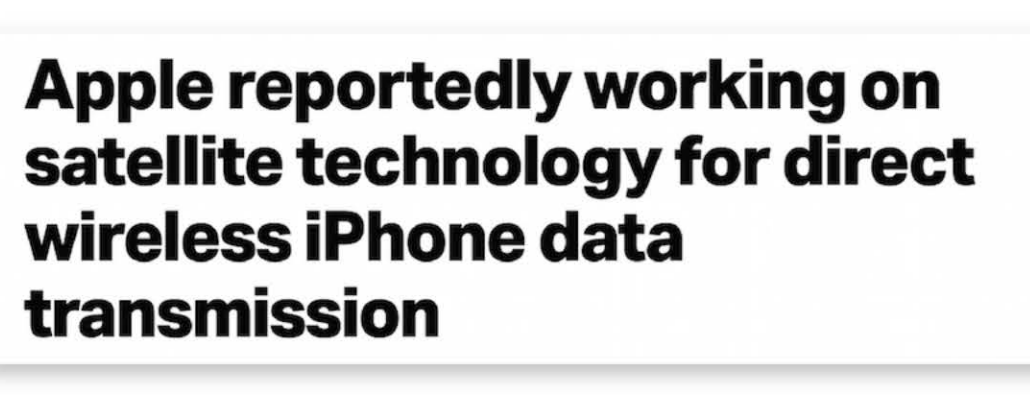
The Verge published this story…



Apple is reportedly developing satellite technology to support its devices

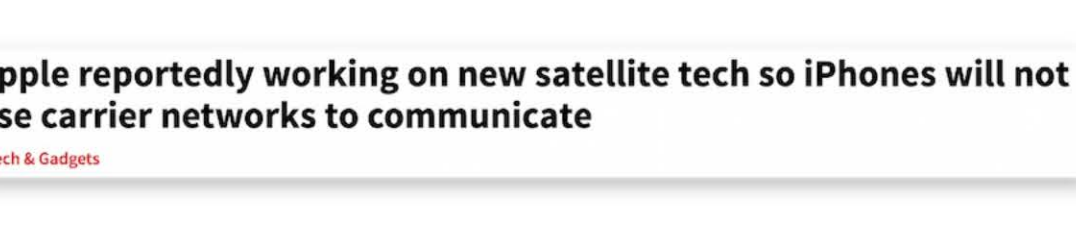
Satellites could help with maps, tracking, coverage, and more

Tech Crunch said…



Apple reportedly working on satellite technology for direct wireless iPhone data transmission

But it was a small site called *Times Now News* that said it the best…



Apple reportedly working on new satellite tech so iPhones will not use carrier networks to communicate

| Tech & Gadgets

Look, I could go on and on…

Showing you story after story…

But the point is simple…

You only have a small window to act before this is on the nightly news.

And by then, the biggest gains will all be gone…

Of course, there's another reason you need to act now if you're looking to get wealthy on this idea…

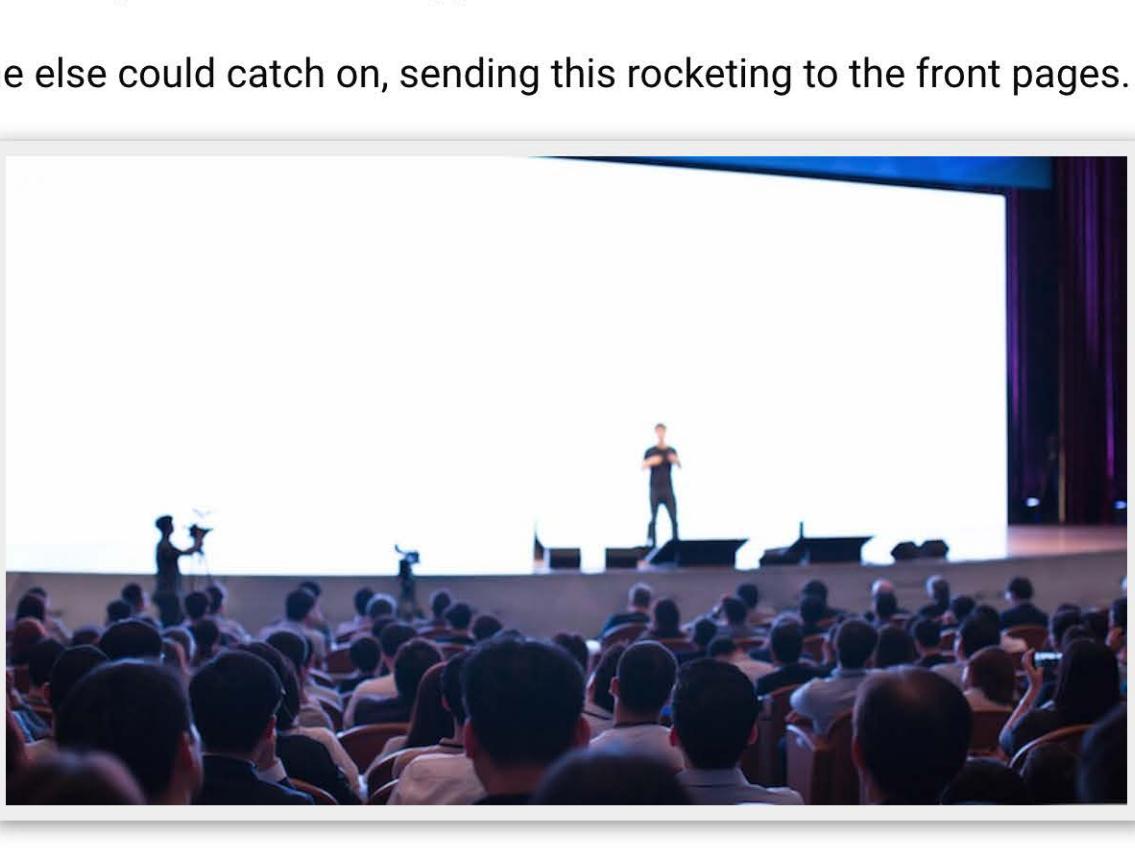
PROOF:
EXHIBIT E — Apple Has A Major Event Rumored For June 7! Could This Be the Big Reveal of What I've Been Sharing With You Today?

Mark your calendar for June 7.

That's when a major rumored event held by Apple is expected to take place…

Where I believe major news about "Apple-Fi" could break…

And everyone else could catch on, sending this rocketing to the front pages.



June 7 could soon go down as a historic day… the day the internet changed forever.

If there's one thing I've learned about this business, it's that opportunities like this really do only come around once in a lifetime.

And when they do, 99% of people do nothing… they sit on the sidelines and get left behind.

But for the 1% who do act, life is never the same… they see their investment grow into the kind of money most people will only ever dream about.

When Apple revealed the iPhone in 2007, for instance, it ignited the $478 billion smartphone industry…

Hundreds of billions of dollars were made in this move.

Over time, shares of Apple went from about $20 to well over $300 before the stock split 4 to 1 on August 31 of 2020.

But that doesn't hold a candle to "Apple-Fi"… and the wealth it could be set to create.

"Apple-Fi" may transform Apple's business, the internet, and our world forever, as you've seen…

And if I'm right about this announcement being made on June 7…

For investors who act ahead of time, even a small amount of money could turn into massive tech gains.

Of course, there's no way to know for sure when this announcement will be made or if it will even happen this year. Even if I'm wrong about this announcement on June 7, or the role Apple will play…

This radical new satellite tech is still a huge breakout…

And regardless of who wins the race, my research says this is one tech advance everyone should cash in on.

But There's A Catch: To Make The Most Money, Do NOT Buy Apple… Do This Instead

You can certainly go out and buy shares of Apple…

And when "Apple-Fi" is revealed to the world as early as June 7, you could do very well.

After all, "Apple-Fi" could boost Apple's business by hundreds of billions of dollars…

Redirecting the revenue of Verizon, AT&T, Sprint, and more all back into their pockets.

But keep in mind…

Added up, the company is *already* a $2 trillion company — Apple would have to go up another $2 trillion to double their stock price.

Could that happen with the introduction of "Apple-Fi?"

Sure… but it will likely take years to happen.

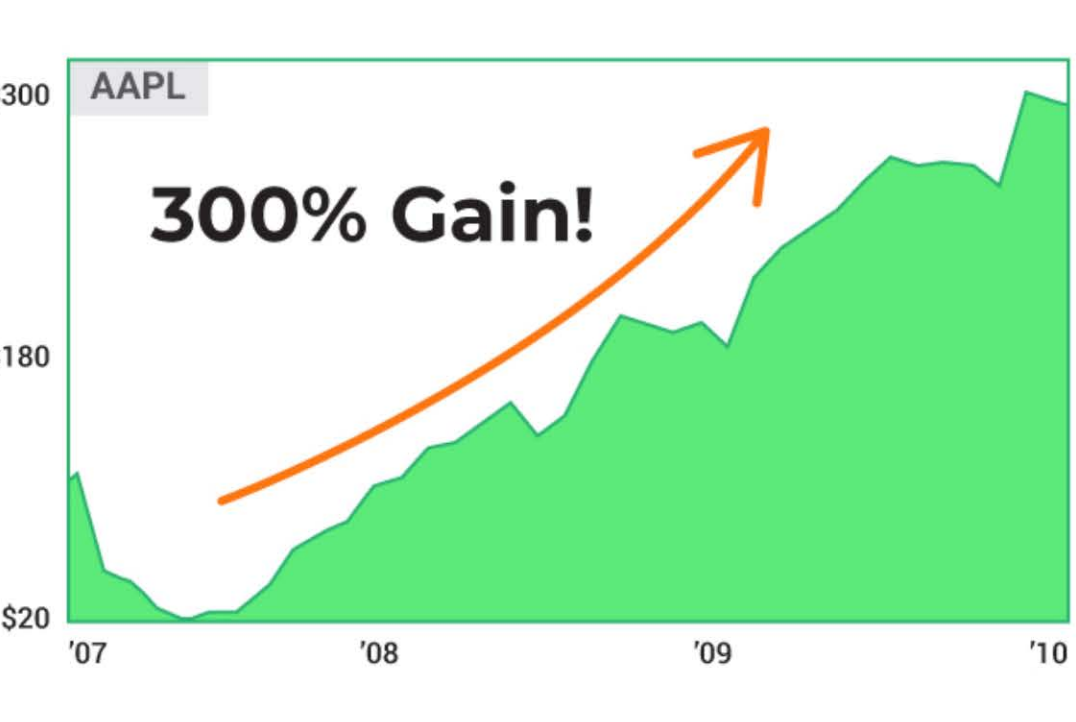
But using history as our guide, the biggest, life-altering fortunes will be made from the *small companies* Apple is partnering with to turn their "Apple-Fi" dream into reality…

Companies that could explode by billions of dollars thanks to this partnership.

We're talking about all the small, satellite chip companies… all the new and small antenna companies supplying parts for their phones… and more.

To show you what I mean, look at what happened to Apple last time they did something like this…

After introducing their breakthrough product, the iPhone, shares went up about **300%** in the following 3 years.



That's certainly not bad, of course…

But as *Axios* reports, *"while Apple gets the lion's share of revenue from the iPhone, there are many suppliers and component makers who make a fortune from the device."*

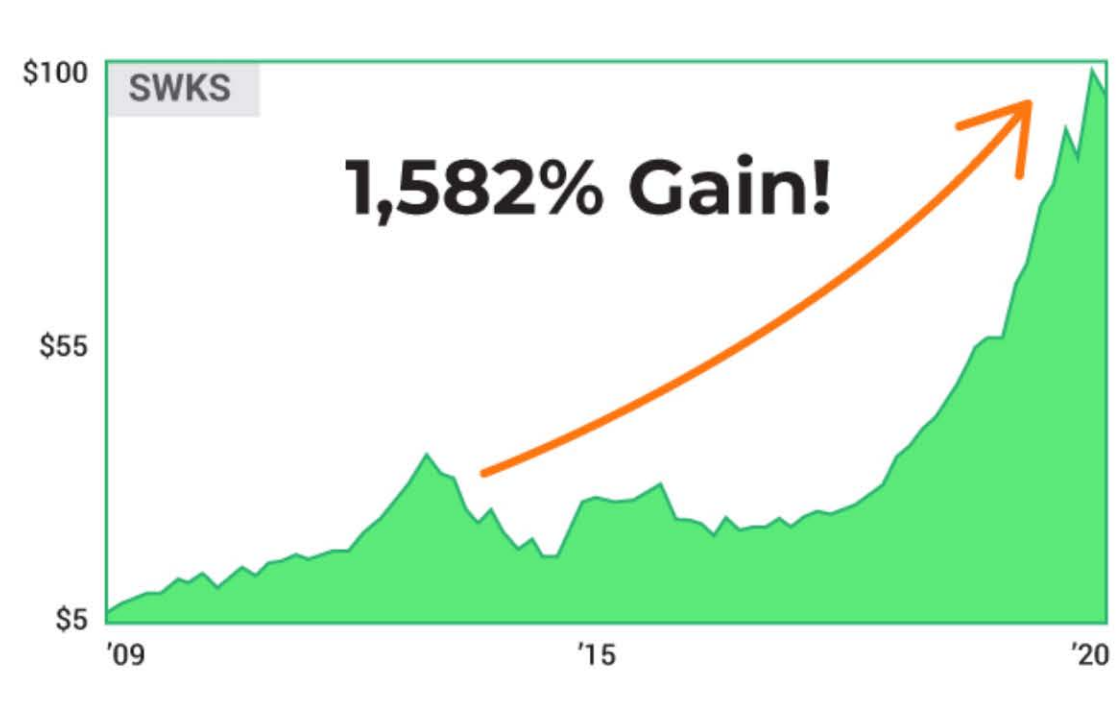
Skyworks Solutions is one of those companies.

They're a small supplier that makes a key piece used in Apple's iPhone.

Before partnering with Apple back in 2008, shares were dirt-cheap… trading at just over $5.

But thanks to the major contract from Apple, their revenue exploded…

And, as a result, shares shot up… and never looked back… going all the way to over $100 today.



That's a 1,582% gain in just over 10 years… enough to turn a $5,000 stake into nearly $100,000.

You see, each time Apple launches a breakthrough new product…

Rather than do all of the work themselves, they partner with small companies to help them out.

After all, it's faster and easier for Apple…

And for these companies like Skyworks Solutions, major, multi-billion dollar contracts from Apple are a bonanza.

Now of course, past performance is no guarantee of future results…

But I believe we're looking at a similar situation here with "Apple-Fi"…

Buy Apple and you'll do well for yourself.

Certainly, better than most people.

But if savvy investors buy the small companies Apple is partnering with to launch "Apple-Fi," though…

They could see a modest stake, maybe as little as $500 or $1,000, grow remarkably over time.

And I've identified a handful of tiny companies that I believe will be key partners to Apple in launching "Apple-Fi".

If I'm right, these are small companies that could explode by billions of dollars — just like Skyworks — and make fast movers rich.

In just a moment, I'll be sharing the details on these companies with you.

The best part?

As great as Skyworks 1,582% gain was…

The gains I'm expecting here today are much bigger.

Why?

Well, the truth is…

I expect "Apple-Fi" will be far bigger than the iPhone… or anything else Apple has done before…

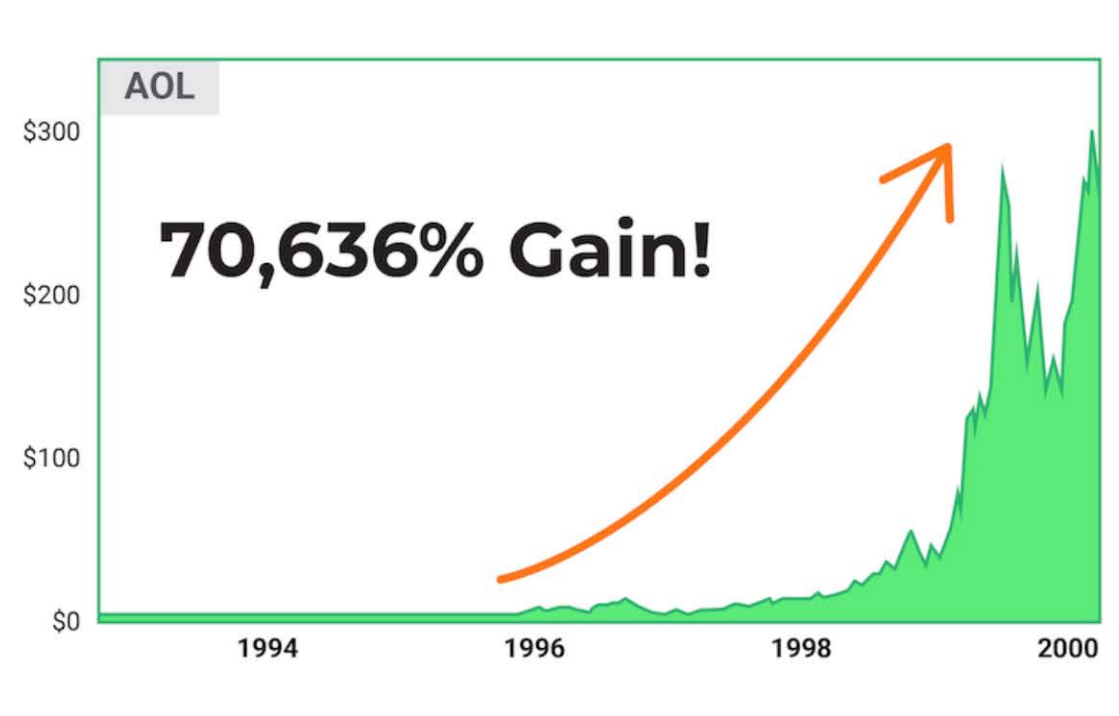
Take a look…

A $500 Stake In These Stocks — *And You'd Have Been Rich*

As you've seen, every time the internet undergoes a radical transformation like this…

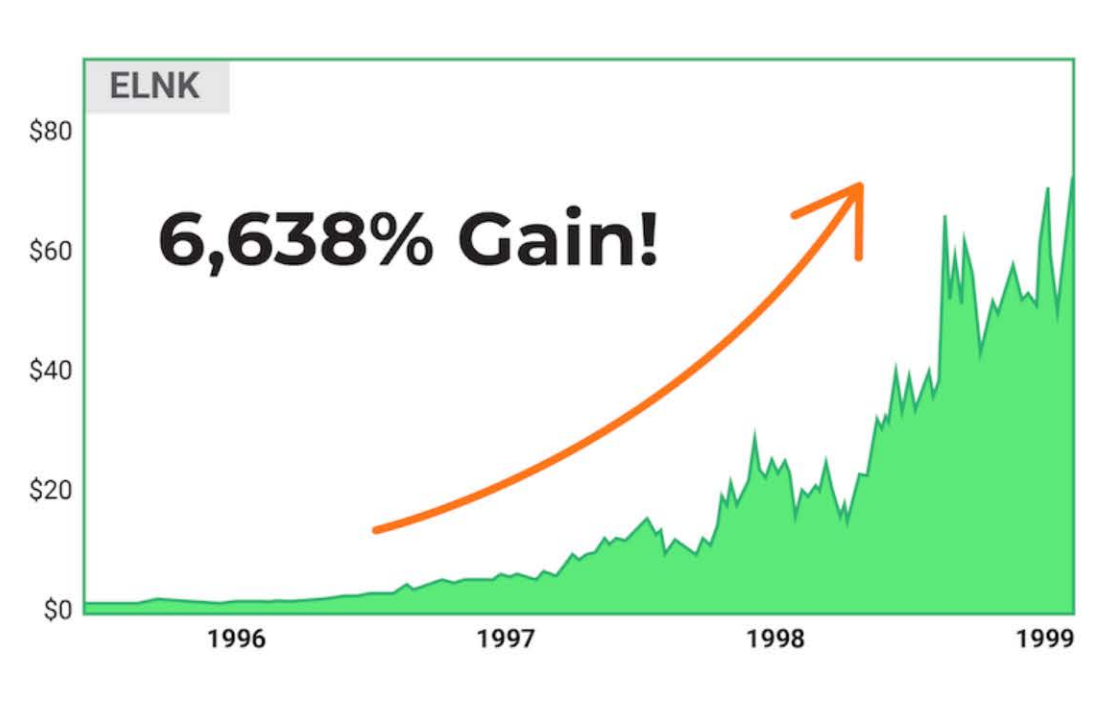
Folks who saw it coming had the chance to get filthy rich over time.

Over the past 20 years, we've seen AOL soar 70,626%…



That turns just $500 into a $353,630 fortune.

We also watched as EarthLink skyrocketed 6,638%…

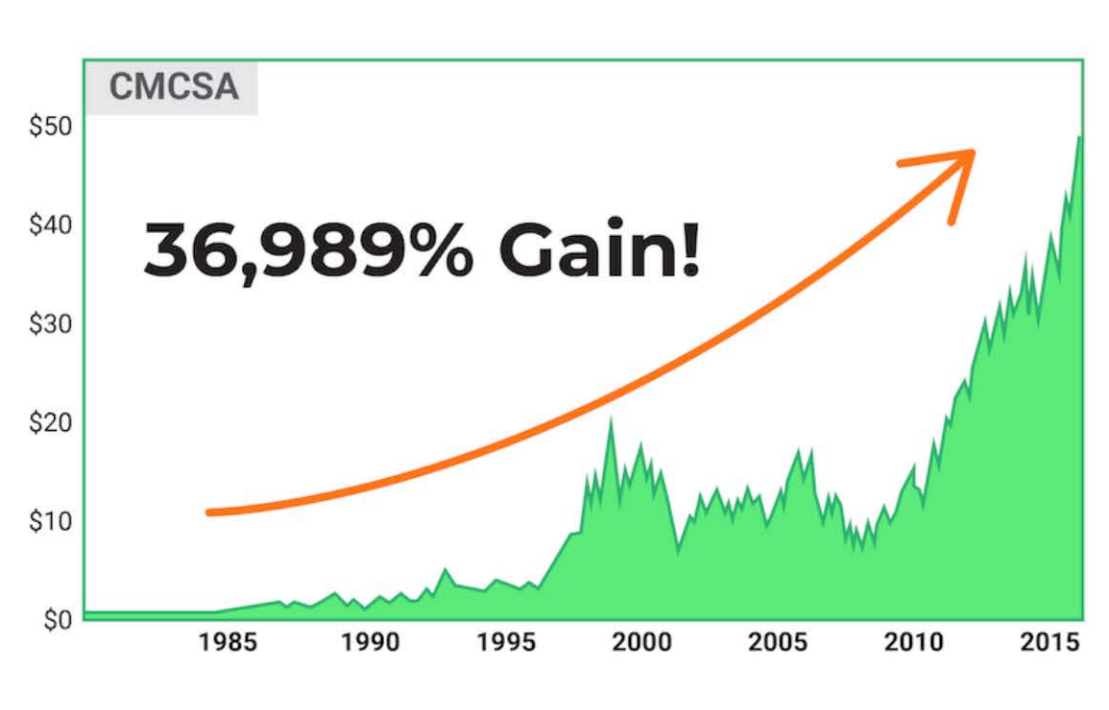


Turning every $500 invested into $33,190 in profits.

That's a good annual salary for a lot of Americans…

For the past 30 years now, Comcast has done even better than that.

Shares of the company catapulted 36,989%…



Turning a tiny $500 stake in the company into $184,945.

How would your life change if you made that kind of money?

And here's where things get really exciting…

"Apple-Fi" is far bigger than AOL's introduction of internet via dial-up connection…

EarthLink's DSL…

Or Comcast's cable internet.

In fact, it may be bigger than all 3 combined.

Remember, I believe "Apple-Fi" will deliver 100% fast, reliable internet, all over the world… **for just $4.99 per month**.

Its rollout will go down as one of the biggest moments in the history of the internet…

Nothing like it has ever been done before.

The amount of money to be made by fast movers is unlike anything we've seen before.

The only question is: will you be one of the folks who stakes their claim?

Or will you sit on the sidelines as June 7 rolls by?

The choice, of course, is yours.

Now, in just a moment, I'll show you exactly how I recommend you get a piece of this "Apple-Fi" revolution…

But before I get to that, let me quickly back up and introduce myself… and explain why I'm sharing this Apple plan with you.

My Name, By The Way, Is Ray Blanco

I'm the Chief Technology Analyst at one of the largest independent financial research organizations in America.

More people follow our work, for example, than receive newspapers like *The Washington Post* or the *Los Angeles Times*.

My role here is simple…

I track down the biggest new technology innovations of *tomorrow*…

So you can invest in them TODAY…

Each and every hour of every day I spend looking for companies that have the potential to reward early investors… people like you and me… with staggering tech wealth.

My secret for finding breakthroughs is pretty simple…

See, over the 15-plus years I've been doing this, I've built up one of the most impressive rolodexes in the business…

If You've Ever Heard The Phrase, "In The Room, In The Deal," That's What I Can Hand You…

To lead my readers to the biggest gains in technology…

I routinely meet with billionaires, award-winning scientists, famous CEOs, and other tech insiders. I'll introduce you to a few of them in a moment.

For instance, before Nvidia was a household name company… I spoke with the company's billionaire CEO.

At the time, very few folks knew about the company (or that it had a bright future)…

But, I discovered they quietly had some major developments planned that would send the company exploding…

So I told my readers to get into Nvidia stock NOW!

Back when I first recommended it all the way in 2014, shares were trading for just around $10…

Today, shares trade for more than $520.

The truth is, I'm always on the hunt for breaking tech opportunities and have recommended dozens of successful plays to my readers…

Thanks to my connections, I always have the full scoop before anyone else…

At any given moment, I can call up many of the big players in tech…

And get to the bottom of the biggest tech stories happening now…

Long before the mainstream media or anyone else catches on.

Because of that, I've been at the vanguard of some of the most explosive tech breakthroughs in recent history…

Guiding folks to profits of 133% in under five months… a partial play of 128.53% in under a year… another of 397.72% in around four years…

And many, many more.

Although I wouldn't expect gains this large, I have a very impressive track record. Since we started 10 years ago, we've seen an average weighted gain per position of 40.79%.

Just recently, for example, I was on the phone with one of the top scientists in the fight against coronavirus.

He's the CEO of a prominent biotech company that's working on promising Covid-19 vaccine.

Only a few days before our call, he met with President Trump to discuss the vaccine. You can see him here on the left.

C·SPAN
c-span.org

And on this call, he shared information with me about his company and the vaccine they're working on that almost nobody — apart from my readers who I recommended it to— know about.

In the weeks that followed my call with that CEO, shares of his company are already up more than 42%.

In the coming months, after hearing what he revealed to me on the phone…

I fully expect those same shares to go up another 200%, 300%, 400%, maybe even more.

But As Great As This Is, I Believe The "Apple-Fi" Opportunity I'm Sharing With You Today Is Far Bigger Than Anything I've Uncovered Before

What you're seeing today is… hands down… the biggest opportunity of my career.

In all my years of doing this, I've never seen anything this big.

The way I see it, it's no different than being one of the very first to invest in smartphone technology before everyone had one in their pocket.

This new breakthrough — which could be revealed to the world just days from now…

Could disrupt the massive $260 billion cable industry for good, putting famous companies like AT&T and Verizon out of business.

It'll also change how you, I, and everyone else receives internet.

I predict the potential rewards for fast movers are far bigger than any other opportunity I've uncovered before.

After all, this may be the biggest breakthrough since the advent of the computer.

All told, there's trillions of dollars at stake here…

The best part is, getting started couldn't be easier…

As I mentioned, by buying Apple you'll do very well when "Apple-Fi" is revealed to the world…

But the biggest gains for investors will come from buying the tiny companies Apple is partnering with to launch this revolution.

It's just like the iPhone…

Since Apple introduced the iPhone to the world in 2007, shares shot up over 300% today.

Not bad, of course…

But some of the companies they partnered with to develop the iPhone, like Skyworks Solutions back in 2009, shot up 1,582% and higher.

I'm certain it will be the same situation here.

And I've identified a handful of these tiny companies that I believe could become key partners with Apple.

Let me show you…

The "Apple-Fi" Rollout Could Send This Tiny Company Exploding

As mentioned, in the race to deploy "Apple-Fi," Apple may launch between 1,400 and 3,000 satellites into space.

And for one tiny company based in California, these plans could be a bonanza.

You see, this little $3 billion company is a leading provider of rocket engines in America.

NASA, Boeing… many big players rely on engines made by this company.

And I'm confident that Apple will too. That's the conclusion all my research leads me to…

Because as Apple moves to launch hundreds, or even thousands of satellites into orbit…

They'll require billions of dollars' worth of rocket engines to do so.

After all… a single engine is estimated to cost well over an estimated $2 million.

And this is one of the key companies that can supply these engines.

If my research and predictions are correct and Apple launches just 2,000 satellites — they'll need 2,000 rockets and 2,000 rocket engines.

And if they partner with this tiny firm to provide them, at a price of $2 million per engine… that's up to an extra $4 billion.

If they launch 3,000?

This little company's revenue could explode by a massive $6 billion.

Needless to say, when a tiny company's revenue shoots up by $6 billion in a matter of weeks or months…

It's share price could explode many multiples higher over time.

Which is why I believe the time to get in is now.

In just a moment, I'll be explaining how to claim the full details on this company before the big "Apple-Fi" rollout.

But first, I should point out…

This is just one of the several companies I've found that could be key partners of Apple.

In fact, another that I've identified could explode even higher than this engine producer.

Let me tell you more about this company now…

Even A Modest Stake In This Next Company Could Turn Into New Wealth As "Apple-Fi" Is Launched Worldwide

At just $500 million and 21 employees, this next company is small — ultra-small.

In other words, it can be more risky…

Tiny stocks like this are incredibly fast-moving can be volatile…

Share prices can swing violently in either direction…

Because of that, you should never invest more than you can afford to lose.

But you may only need a modest stake in this company — $250, $100, whatever works for you…

And if my predictions are accurate, investors could do very, very well in the months ahead.

Because I believe this ultra-tiny company is on the cusp of a major, multi-billion dollar contract from Apple…

Fast movers could multiply their initial investment by 10x, 15x, maybe even 20x or more over time.

You see, after launching up to 3,000 satellites, Apple will need to allocate billions of dollars annually to maintain this network of satellites.

This includes doing things like swapping out satellites when they break and ensuring service isn't interrupted, for example.

And this company is uniquely positioned to help them do that.

With years of experience in this field, this little company is a leader in deploying and maintaining an extensive network of satellites.

Few other companies in the world can do what they do — and my research says they'll be a key partner in "Apple-Fi."

In fact, as I mentioned, I project investors could see a small purchase of shares grow to many times their original stake in the months and years ahead as this tech flourishes if this contract is awarded.

And that's on top of the other company we just covered — the engine manufacturer that could see share prices shoot significantly higher over months and years, thanks to "Apple-Fi."

Here's the best part…

TECHNOLOGY PROFITS CONFI

APPLE'S GREATEST BREAKTHROUGH YET:
Retire Rich On The "Apple-Fi" Revolution
SEVEN FIGURE

To make it as easy as possible for you to get started, I've put the details on both of these companies into a special report called ***Apple's Greatest Breakthrough Yet: Retire Rich On The "Apple-Fi" Revolution.***

It shows you everything you need to know about these potential key partners in "Apple-Fi" — the company names and ticker symbols, why I think they're so critical to Apple, and much, much more.

In just a moment, I'll show you how to have this report sent directly to your email, ready for immediate download.

And there's more…

Inside ***Apple's Greatest Breakthrough Yet: Retire Rich On The "Apple-Fi" Revolution***, you'll find several other companies that will be key to "Apple-Fi"…

There's Staggering Amounts Of Money At Stake — This Is Just Scratching The Surface In Terms Of Your Profit Potential

Here's just a few of the companies you'll find inside ***Apple's Greatest Breakthrough Yet: Retire Early On The "Apple-Fi" Revolution*** …

- On page 2, you'll find the company that could be responsible for helping Apple transmit Wi-Fi from their satellites in space directly to your device. Since DISH spun this company off in 2009, shares have already soared as high as 200%… but this is only the beginning. I predict this company could become a key partner to Apple in the coming months… and could be rewarded with billions of dollars in extra profits. Even a tiny stake today could hand investors big profits…
- Up next, you'll find the company that was just named as one of the best stocks to buy by *Yahoo! Finance*. And I'm not surprised… they've already entered into talks about a partnership with Apple to assist in "Apple-Fi". And as "Apple-Fi" is announced to the world and rolled out, this company could be one of the biggest winners… fast movers could reap profits…
- This next company you'll find is incredible… founded by a brilliant billionaire, it's one of the leading space companies in the world. Shares are already up nearly 400% since December… but if you move fast, you can still get in dirt-cheap… before a potential partnership with Apple is announced…
- Your profit potential with this next company is staggering. This tiny company is one of the top satellite manufacturers in America. With revenues of just $700,000, it's earnings could easily rocket tenfold, twentyfold over the next few years if they land a major contract from Apple as I expect.
- Finally, you'll also find an off-the-radar space manufacturing company from Colorado. I expect it could lock in a major contract with Apple… that could send shares exploding 10x higher or more when the news is announced.
  The time to secure your stake is now…

Of course, it's possible that this announcement doesn't happen on June 7… or that the companies I've identified won't receive a contract from Apple.

And all investment carry risk, especially in speculative situations like this.

But that's what makes this situation so potentially profitable…

Apple's Greatest Breakthrough Yet: Retire Rich On The "Apple-Fi" Revolution shows you everything you need to know about these companies.

This special report… and the companies you'll discover inside… could set fast movers up for incredible wealth potential.

In just a moment, I'll show you how to claim this report ready for immediate download.

You need to hurry though…

If this announcement is made on June 7 as I expect, and the rest of the world catches on to "Apple-Fi", it'll be too late…

The Clock Is Ticking — Get Started Now

In the past, people have paid more than $6,000 to receive the full collection of my research…

TECHNOLOGY PROFITS CONFI

APPLE'S GREATEST BREAKTHROUGH YET:
Retire Rich On The "Apple-Fi" Revolution
SEVEN FIGURE

And considering the profit potential they receive, that's well worth it.

Because of that, ***Apple's Greatest Breakthrough Yet: Retire Rich On The "Apple-Fi" Revolution*** is easily worth at least $1,500 or more.

But I want to get it into your hands for FREE today.

To claim it, all I ask is that you take a risk-free trial to my monthly investment research advisory, ***Technology Profits Confidential***.

You see, every month, I track down companies working on cutting-edge scientific breakthroughs (like Apple and "Apple-Fi")…

Companies that have the potential to hand early investors huge wealth…

And I share them with more than 88,350 private readers in ***Technology Profits Confidential***.

Quite frankly, there's nothing else like it in the world…

I've spent well over a decade building up one of the most impressive rolodexes in the business.

As A Reader Of *Technology Profits Confidential*, You'll Always Have This Inside Scoop

Imagine being in the room with the world's smartest scientists, discovering the world-changing breakthroughs they're working on, as they're working on them…

Imagine having access to the world's top tech insiders, being as close to them as possible — discovering how to invest in the biggest new innovations before they change the world…

Imagine knowing about the world's biggest technology breakthroughs long before your friends, family, or anyone else you know ever hears about them.

Now imagine how much money you could make if you had access to this kind of information, every single month…

As a reader of ***Technology Profits Confidential***, you'll have exactly that.

Just recently, for example, I've crossed paths with the famous billionaire biotech CEO Phillip Frost…

Nvidia's billionaire CEO…

Elon Musk…

A world-famous scientist who's working on adding decades to human lifespan (I predict his work will win him a Nobel Peace Prize)…

One of the biggest entrepreneurs in pot, who runs one of the largest publicly traded pot companies in America…

And much more… powerful politicians, top investors, you name it.

And I've shared the incredible opportunities I uncovered from these meetings with my ***Technology Profits Confidential*** readers… helping them position themselves for massive profit potential.

How much would a resource like that be worth to you? There's truly nothing else like it in the world.

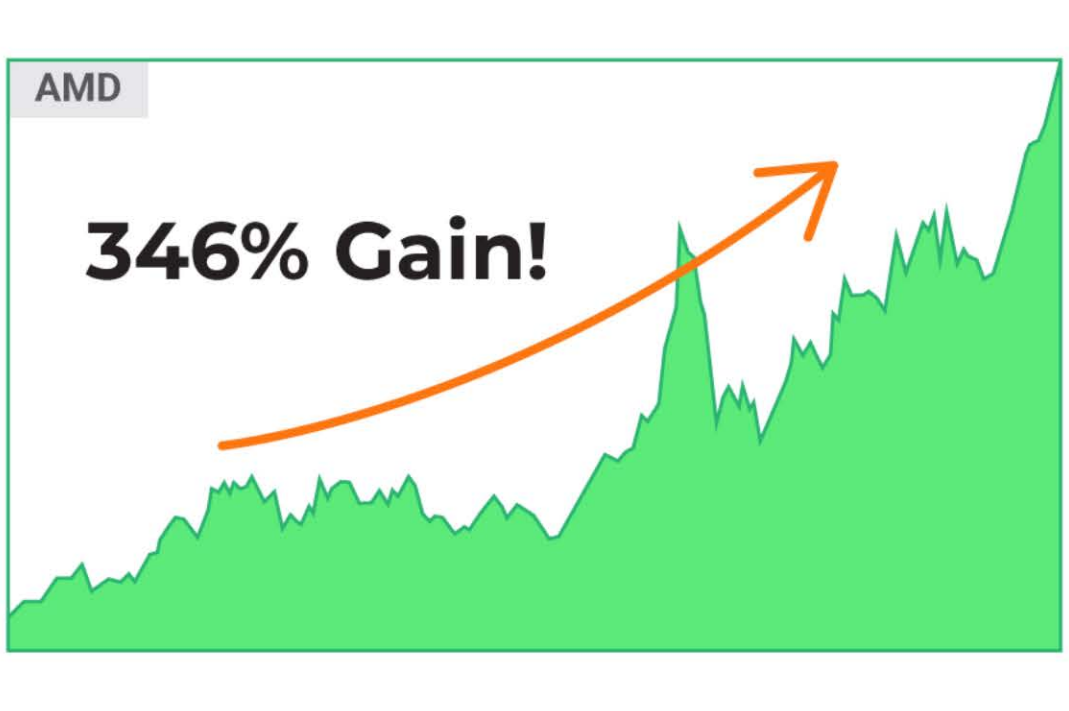
Well, before you answer, consider how much money my readers have had chance to make on my best plays…

For example, I saw a huge opportunity in the chip maker AMD long before anyone else.

I urged folks to get in at just $4.50 a share in 2016…

Before long, by 2018, shares traded for more than $20, giving readers the shot at weighted 268% gains…

AMD went all the way to $37 in 2019.



Then there was the company ISIS Pharmaceuticals.

They were developing a breakthrough DNA treatment.

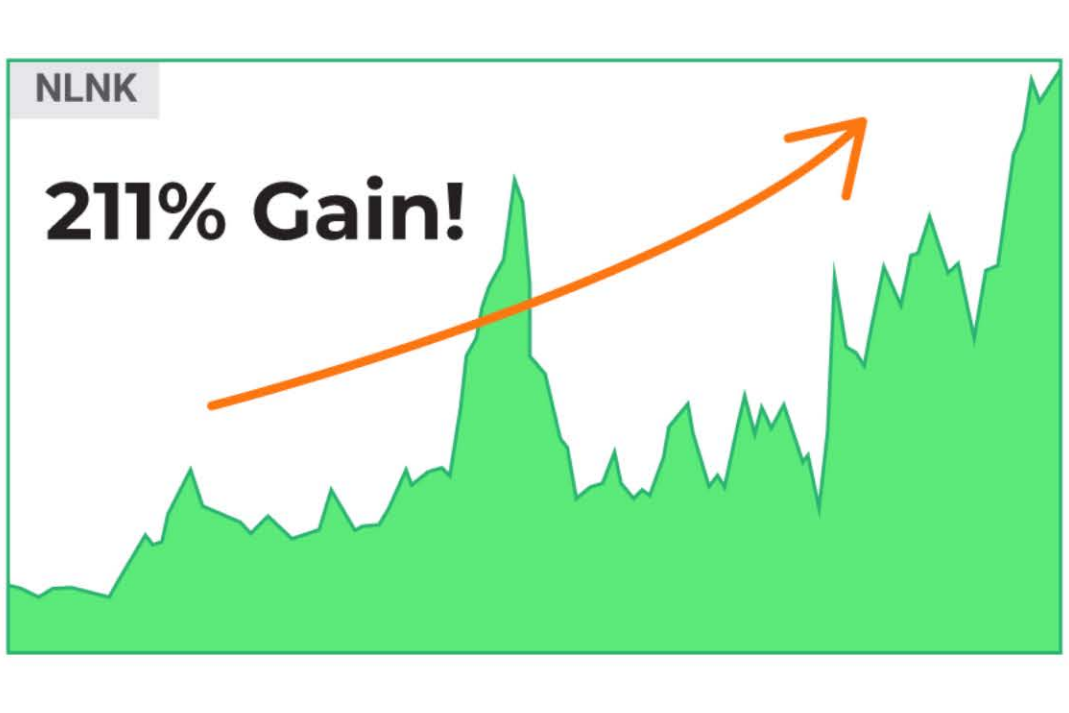
When I found the company in 2010, shares traded for just $8.43…

But by late 2012, the company soared 217%.

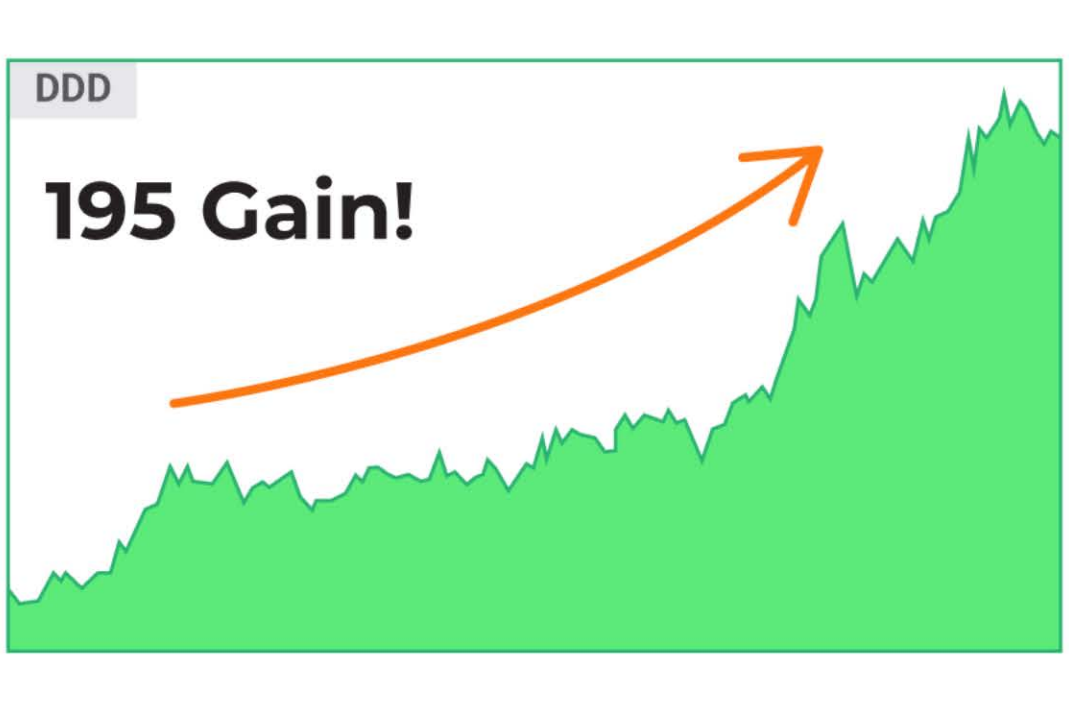
Folks who followed me had the chance at 364% gains.

I could go on for days…

Like the time I found the company NewLink Genetics, which went up 211% in about a year…



Then there was 3D Systems Corp., which exploded 195%…



And Endocyte, which went up 266% in about two years…

And on, and on.

Needless to say, many readers of ***Technology Profits Confidential*** have done very well.

Since we started 10 years ago, we've seen an average weighted gain per position of 40.79%.

Plus, our average hold time per position is just over 18 months…

My point is, while of course not every play is a winning move, I'm able to track down the biggest market stories…

And the "thank you" notes I routinely receive from folks are nothing short of incredible.

Here's a few of them so you can see for yourself…

John R. from Sarasota, FL, says…

> "I doubled my investment to $18,000 in a little over three months. My wife and I feel a lot more comfortable with my portfolio increasing than just having to depend on Social Security."

Ed L. from Erie, PA, says…

> "[I have owned] NVDA for 4 years, with 1,500% gains, the best so far. [I] started with $5,000 with the intent of funding retirement for myself and providing a family legacy."

Herb M. from Manchester, NH, says…

> "I bought [Stock] on 3/20/20, paid $20,340. I sold on 7/29/20 for a total of $67,318. My wife and I are full-time world travelers. We will use the profit for a cruise."

Albert G. from Pittsburgh, PA, says…

> "In the case of NVDA, I purchased it for $35.18 [in 2016] and it's gone up approximately 1,160% since then. I tend to buy stocks and then never sell. In the last 10 years my portfolio has tripled and I am 82 years old."

And Otto W. from Columbus, OH, says…

> "[I had a] 5-bagger in 12 months with [Stock]."

These are just a few of the hundreds of messages I've received from my readers…

And I'm confident that not long from today, you'll be sending me a message just like this…

So how much does access to ***Technology Profits Confidential*** cost?

Well, I think you're going to like the answer…

It's only a tiny fraction of what you'd imagine.

More about that in just a moment.

First, there's something else you should know…

Apple's potential announcement isn't the only up and coming technology I'm excited about…

In fact, there's another possible 81,000% growth story my readers and I are watching closely…

These 2 "Hidden" Virtual Reality Companies Could Deliver You Staggering Gains for Investors

Time magazine, the *Financial Times*, *Fortune*… they've all written and raved about the possibilities once we can interact inside of virtual worlds.

Samsung and **Facebook** have already invested billions.

Google's already made a big move into this technology.

Even **NASA's** lining up to gain an advantage.

What's got me and my readers excited, though, is the 81,000% growth we could see in the market for virtual reality products and technology.

This could be a $30 billion-a-year business years from today.

And we don't intend to miss it.

I've helped my ***Technology Profits Confidential*** readers nail down TWO companies that could absolutely soar as the virtual reality boom unfolds, including…

- The company that's responsible for building the powerful visual "guts" of the now-famous and highly sought-after Oculus virtual reality device from Facebook
- A second company with cutting-edge motion sensor technology, designed to make every virtual world experience as smooth and lifelike as reality

BONUS Report
THE TWO HIDDEN COMPANIES DRIVING THE VIRTUAL REALITY REVOLUTION

- ***Apple's Greatest Breakthrough Yet: Retire Rich On The "Apple-Fi" Revolution* ($1,500 Value)…**
- **SPECIAL BONUS REPORT #1: *The Two Hidden Companies Driving the Virtual Reality Revolution* ($99 Value)…**

In addition to that, as a reader of ***Technology Profits Confidential***, you'll also receive…

- **Weekly Email Alerts:** As stories change over time, or a company we hold releases a new product, I'll show you everything you need to know. That way, there's never any guess work… you'll always know what's going on. **($99 Value)…**
- **Urgent Trading Alerts:** Whenever it's time to make a move in the markets, I'll send you an email showing you what to do and why. If a company we hold is shooting up and it's time to cash our gains, I'll send you an email showing you how to take action. If an urgent opportunity crosses my desk, I'll send you an email showing you how to take action. You're never alone in this venture. **($199 Value)…**
- **Access To The Special Members-Only Website:** Immediately after joining, you'll also receive a login to the special ***Technology Profits Confidential*** members-only website. You can read all the back issues and see all the alerts I've sent. You can download and read all the special reports I've issued. You can track our portfolio in real time… and much, much more. **($149 Value)…**
- **First Read Access To The Biggest Stories:** Let's say another urgent opportunity crosses my desk 4 months from today. When I issue a special report on the company, you'll be the first to get it — free of charge — with your "first read access." **($249 Value)…**
- **Monthly Members-Only Phone Calls:** Every month, I host a private phone call where I share what I'm researching… where the biggest profit potential is… what I'm excited about… and answer any questions you may have. You'll be invited to these monthly calls immediately after joining today. **($399 Value)…**

Added up, that's a total value of $2,893.

All of this is designed to put you in front of the biggest tech stories… before anyone else.

You'll always have inside scoop before anyone else, delivered to you in plain, simple, immediately actionable alerts.

No boring theory or long-winded science explanations.

So how much is a subscription to ***Technology Profits Confidential***?

Well, keep in mind… it's a premium service.

It's followed by top experts… as well as more than 88,350 ordinary folks across the country…

All of whom follow my work to get access to the latest tech stories long before anyone else — and you can join them, just minutes from now.

If you were to hire a money manager, you'd pay tens, even hundreds of thousands of dollars… for poor performance.

In fact, *The Wall Street Journal* reports the average money manager struggles to even beat the market's performance of about 7% per year on average.

Since we started 10 years ago, we've seen an average weighted gain per position of 40.79%.

Plus, our average hold time per position is just over a year and a half.

That's over 10 years of recommendations, and includes the losing plays…

In fact, just recently in our ***Technology Profits Confidential*** portfolio, readers had the chance to walk away with some serious gains.

And while not every play is a winner, you can be certain more big winners are still to come.

$6,000 for the chance to multiply your money over and over, every year is a steal.

Even if you started with just a small amount of money… you could quickly grow it into a big fortune, just like many of my readers have already had the chance to do.

But it gets better…

When you respond to me today, you won't pay anywhere near $6,000…

You won't pay $1,000, either…

You won't even pay $500.

In fact, ordinarily I price a full year of ***Technology Profits Confidential*** at just $199.

And that's a great deal… that works out to under $4 per week — less than the price of a cup of coffee.

But the profit potential in front of investors right now is so life-changing…

It's simply too important to miss out on.

That's why, when you respond today, I can do much better than $199 for you…

Through this special offer I've arranged for you, you'll pay just a small fraction of the $199 retail price.

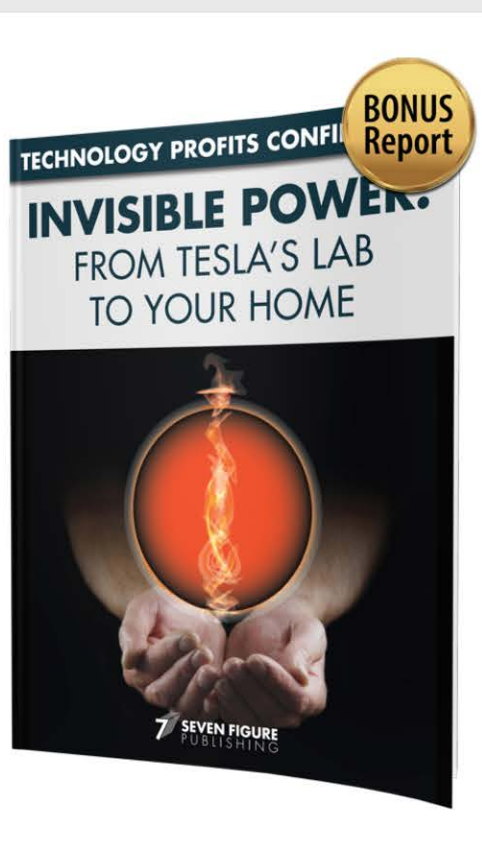
More on that in a moment.

First, there's one last special gift I'll send to you as soon as you get started today…

One last technology my readers and I are following…

Let me tell you more about it now…

Meet The Company Behind The Biggest Energy Revolution Of Our Lifetime



The second gift is another special report I'm calling ***Invisible Power: From Tesla's Lab to Your Home***.

"Invisible power" isn't sci-fi. It's very real. It's also going to prove super-lucrative if you know the right move to make.

That's why I'd also like you to have (for free, of course, with your new subscription) my report called ***Invisible Power: From Tesla's Lab to Your Home***.

Famous scientist, engineer and inventor Nikola Tesla pioneered the idea of "invisible power"… but it wasn't technologically possible during his lifetime.

Now, however, it's poised to change everything about how we use, transmit and think about power.

The fastest movers on "invisible power" could reap serious profits…

And my report shows you all the details and gives you complete instructions for what to do if you want to jump in.

That's why I want to put your copy of ***Invisible Power: From Tesla's Lab to Your Home*** in your hands today without delay.

This may be the single biggest energy revolution of our lifetime…

Everything you need to know about this potentially life-changing situation is detailed inside your copy of ***Invisible Power: From Tesla's Lab to Your Home***.

So how much does it cost to join ***Technology Profits Confidential*** — and instantly receive everything we've discussed here today, ready for immediate download?

If you've made it this far, you clearly recognize that "Apple-Fi" will be one of the biggest market disruptions of our lifetime.

It'll change how the world receives internet… put giants like Verizon, AT&T, Sprint, T-Mobile, and others out of business… and ignite one of the greatest innovations of the 21st century.

But odds are, even after everything you've seen today, you may still be hesitant about getting started. And I get it.

As I said, this is probably the first time you and I have ever met.

So I'm going to do something very special for you right now…

I told you earlier that you can try ***Technology Profits Confidential*** risk-free for a full 90 days…

And if it's not everything I've said it is (and more), my team will give you a full refund.

I'm sure you can agree that sounds fair.

But because this urgent "Apple-Fi" situation is moving quickly… I'm willing to do something very special for you right now, and take it a step further.

Respond now and I'll double your time to try ***Technology Profits Confidential*** 100% risk-free… from 90 days to a full 180 days.

That's more than enough time to go through my work, try out my recommendations, and put everything I've said here to the test.

If my research hasn't changed your life 180 days from now, you can call up and request a full, no-hassle refund.

Heck, even if you decide on day 179 this isn't right for you… you can call up my team and request a refund.

You'll still be able to keep all of the special reports and issues. It's my way of saying thanks, simply for giving it a try.

Sound fair enough?

Not only am I slashing the price to the bone for you…

But I'm also doubling the amount of time you can try this out, 100% risk-free.

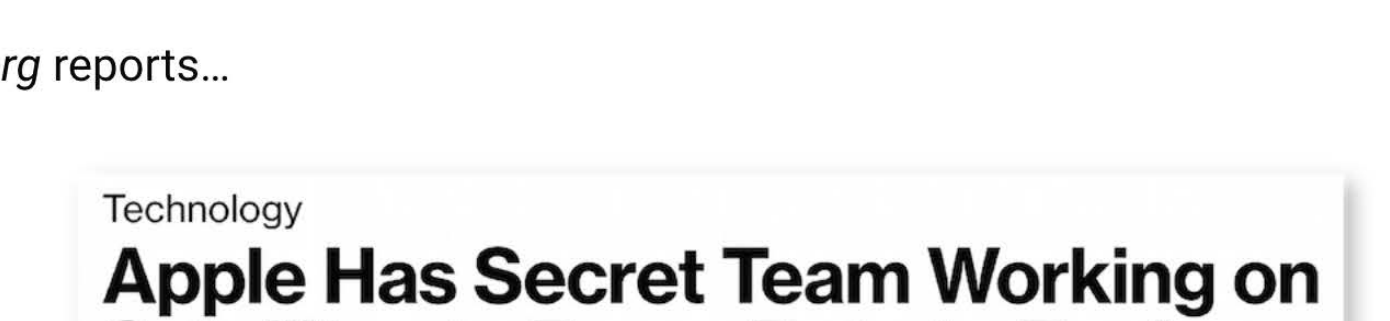
This is the best offer I can possibly make it… but it won't be available forever.

Just click below now to get started.

The clock is ticking. This is one of the biggest market stories I've seen in years… you won't want to miss it.

The mainstream media is already catching on to what's happening — word is slowly starting to spread.

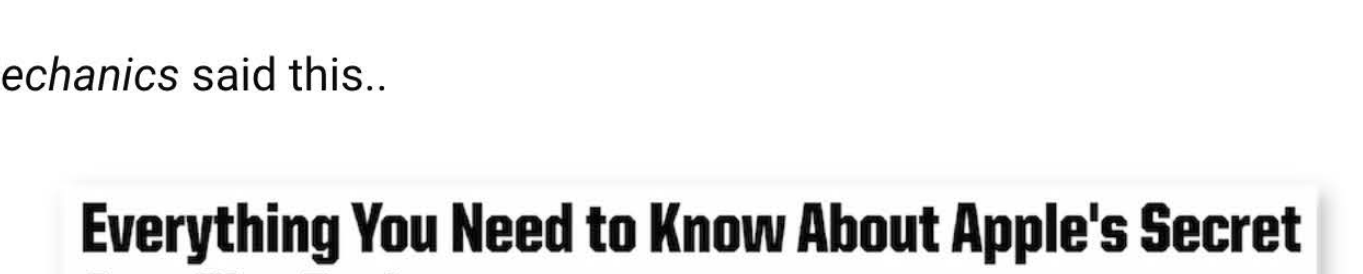
Bloomberg reports…



Technology

Apple Has Secret Team Working on Satellites to Beam Data to Devices

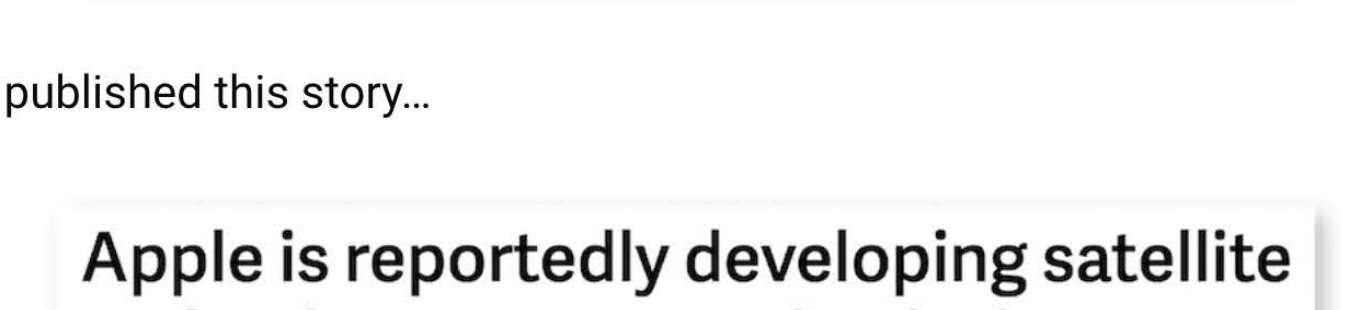
Popular Mechanics said this..



Everything You Need to Know About Apple's Secret Satellite Project

If Apple really is building its own satellites, that could mean faster transmission of maps data and iMessages, too.

The Verge published this story…



Apple is reportedly developing satellite technology to support its devices

Satellites could help with maps, tracking, coverage, and more

That means you only have a small window left to position yourself before this "Apple-Fi" story hits the frontpages and everyone knows about it.

When that happens, it'll be too late… all the big money will have already been made.

Trust me, a year from now you'll kick yourself if you put this off.

Still here?

No doubt you might still have a few questions that you want answered before getting started.

Let me quickly address them now…

Q: What Is *Technology Profits Confidential*? How Does It Work?

Leveraging my insider contacts of CEOs, top scientists, tech insiders, powerful politicians, you name it… I track down the biggest, most revolutionary new technologies before anyone else.

Then, I find the companies pioneering the new tech… and share it with tens of thousands of private readers in ***Technology Profits Confidential***.

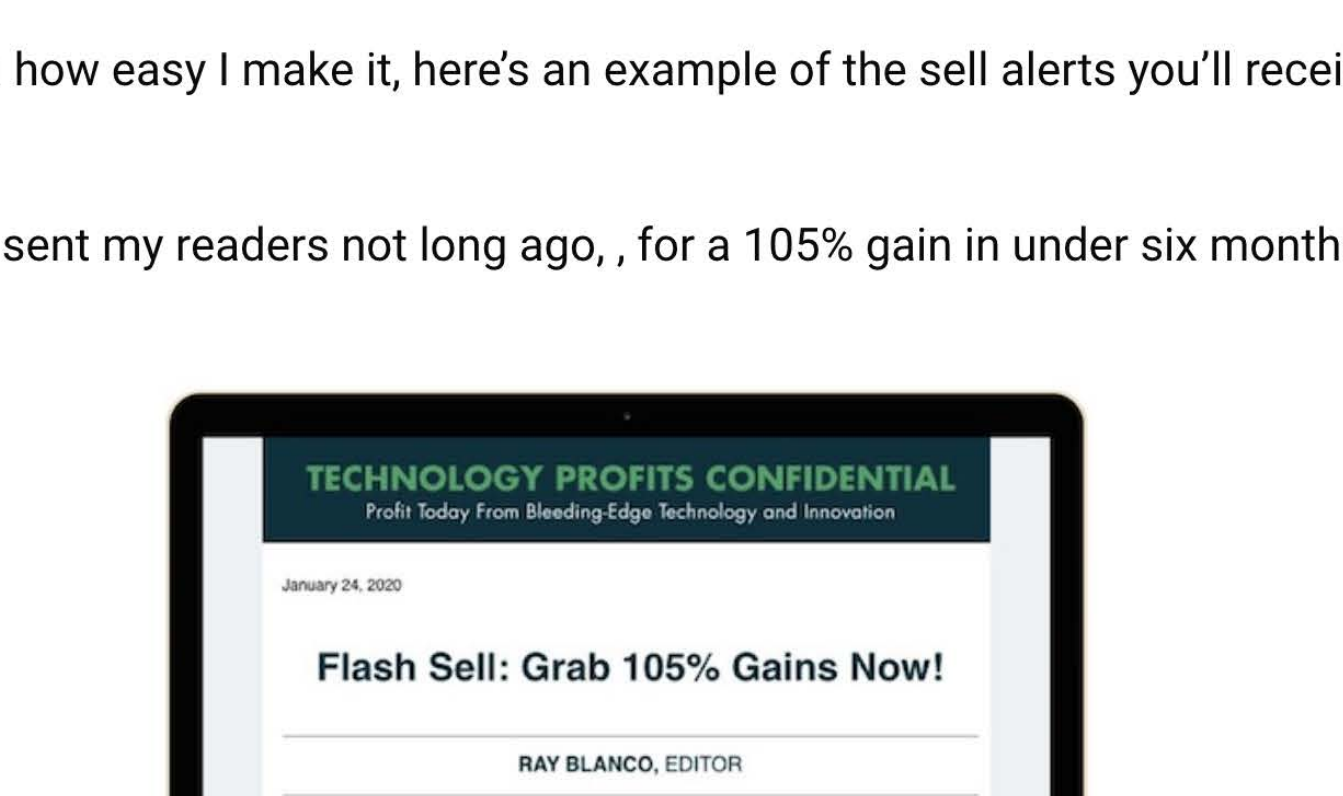
Technology Profits Confidential is the only place in the entire world where I recommend tiny stocks my research indicates have the potential to see stock prices soar over time. Sometimes, big gains can pop up in just months, and other times we hold stocks for a couple of years…

Every month, I'll send you a new issue, written in simple, easy-to-read language detailing the biggest opportunity I'm looking at now… showing you how to get a piece of it.

Whenever it's time to make a move in the markets, I'll guide you through what to do and why.

To show you how easy I make it, here's an example of the sell alerts you'll receive from me.

This is one I sent my readers not long ago, , for a 105% gain in under six months:



TECHNOLOGY PROFITS CONFIDENTIAL

Flash Sell: Grab 105% Gains Now!

RAY BLANCO, EDITOR

Dear Reader,

Shares of our space play **Virgin Galactic Inc.**

Whenever I recommend buying a new stock, or sell one we currently hold…

You'll receive a simple, straight-to-the-point email from me showing you the action to take.

Plus, I show you how to take the buy or sell action inside your own account.

It's really that easy. Even if you've never invested before, you'll be able to do this.

Your alert emails show you what to do and why.

If you want to take part, you simply need to pull the trigger.

Easy, right?

As I mentioned, doesn't matter if you're a complete beginner or if you've been investing for years… doesn't matter if you have $1,000 to start or $100,000…

I'll show you how to invest in the biggest, world-changing breakthroughs.

I bring you my best new ideas every month — you simply read through my work, and decide if you want to invest in the company I'm telling you about.

Q: How Do I Know This Isn't A Scam?

My company is the largest fully independent financial research organization in America today.

With millions of readers across the country, more people follow our work, for example, than receive newspapers like *The Washington Post* or the *Los Angeles Times*.

We don't accept money or favors from any companies we recommend, and we don't "front-run" any of the investments we recommend.

Our research is fully independent, we serve only one person: you.

Our business only makes money when people stick around for the long term. If we published dishonest material, everyone would unsub and we'd go out of business.

That's also why the price to get started is so low… I know I need to earn your trust first — and once I do, and you see how valuable my research is, you'll stick around for life.

You take absolutely no risk with your decision to get started today. If you decide this isn't right for you, just call up my team and let them know. They'll immediately issue a full, no-questions-asked refund.

Give this a try… I'm betting you'll love it so much you'll want to stick around for good. If not, you don't risk a penny.

Sound fair enough?

Q: What's Happening On June 7?

On June 7, Apple is holding their annual WWDC… where I believe they'll reveal "Apple-Fi" to the public… and the rest of the world could catch on to this massive development.

And just like the iPhone changed the world and made fortunes, the announcement of this massive trillion-dollar internet disruption could make fast movers (like you) incredibly wealthy.

That's why it's important to get in now…

Once the whole world finds out, all of the big profits will have already been made.

Apple's Greatest Breakthrough Yet: Retire Rich On The "Apple-Fi" Revolution

Plus, the special bonuses we discussed:

The Two Hidden Companies Driving the Virtual Reality Revolution

Invisible Power: From Tesla's Lab to Your Home

Q: Who Are You? Why Should I Trust You?

Again, I understand you and I have just met, so let me quickly reintroduce myself.

My name's Ray Blanco and even if you haven't heard of me, insiders have.

Over the years I've built one of the most impressive rolodexes in the business…

Whenever I uncover a breakthrough new technology, I can call up famous scientists, CEOs, tech insiders, you name it… and get to the bottom of the story long before anyone else.

It's thanks to this inside scoop that I was one of the very first to recommend 5G stocks, pot stocks, virtual reality, artificial intelligence, and more…

All of which are now major, multi-billion dollar opportunities…

Opportunities that my readers have had the chance to make a fortune from.

Don't forget — by acting now, you can try my work out for yourself with no risk. If it isn't everything I said it is — and more — you won't pay a cent.

Q: How Much Money Could I Make From This?

If history is any guide, the amount of money investors could make if my prediction about Apple-Fi is right is nothing short of life-changing.

Remember, you can buy Apple and do quite well as they forever change how the world uses internet… putting Verizon, AT&T, Comcast, all the others out of business… and add hundreds of billions, even trillions of dollars in new revenue.

But the biggest gains will come from investing in the tiny companies I've identified that I believe Apple will partner with to launch "Apple-Fi"…

The last time Apple introduced something as revolutionary as this, it was their breakthrough iPhone in 2007, and shares (not accounting for splits) have gone up more than 300% today.

That's certainly not bad, of course…

But the company Skyworks Solutions did much better.

They're a small supplier that makes a key piece used in Apple's iPhone.

Before partnering with Apple, shares were dirt-cheap… trading at just over $5.

But thanks to the major contract from Apple, their revenue exploded…

And, as a result, shares shot up… and never looked back… going all the way to over $100.

That's a 1,582% gain… enough to turn a $5,000 stake into nearly $100,000.

The best part?

I've identified several companies that could go even higher than Skyworks if they partner with Apple.

You'll get all of the details on them — and see how to buy them in your own account — when you click the "Subscribe Now" button below.

Q: Is Your Ordering Process Secure?

We use the latest encryption technology available to ensure your data is 100% protected throughout the order process.

The entire process is fast, safe, and completely secure. I've made sure of it.

Q: What If I Decide This Isn't Right For Me?

No problem! As they say, "nothing ventured, nothing gained."

If you decide my work isn't right for you, just call up my team and let them know. They'll immediately send you a full refund and you can even keep everything we've discussed here today, just as my way of saying thanks.

If you've stuck with me this far, then all I can say is give this a try!

Here's what I propose: go ahead and click "Subscribe Now" below and check my research out for yourself.

You have nothing to lose by doing this, and everything to gain.

Sound fair?

Q: This All Sounds Too Good To Be True… What's The 'Catch'?

The mark of a smart investor is skepticism and asking questions. So I'm not surprised if you were wondering this.

And that's why I'm doubling your time to try this out risk-free to a full 6 months — that's 180 days, more than enough time to see for yourself how valuable my work is.

If you don't get results, you can call us up and ask for a full, no-hassle refund. There's absolutely no risk to you.

The only catch is that you must position yourself now. If I'm correct and "Apple-Fi" is revealed to the world on June 7, my research says it'll explode, hitting the front pages in an instant.

By that time, all the big money will have been made by fast movers… it'll be too late.

So don't wait… go ahead and click the "Subscribe Now" button below to get started.

Q: If I Have Any Questions Can I Speak To Someone?

Absolutely.

If at any point you have any questions about your subscription… you can call up my ***Technology Profits Confidential*** customer care team at 844-370-6637.

Based right here in the U.S., they're standing by to answer 9am to 8pm to answer any questions you may have and help you out.

Q: How Long Will It Take To Receive Everything We've Discussed?

Within minutes of joining ***Technology Profits Confidential*** today, you'll find a new email in your inbox from me. Open it.

Inside you'll find the report we discussed today, ***Apple's Greatest Breakthrough Yet: Retire Rich On The "Apple-Fi" Revolution…*** plus all of your special bonus reports, ready for immediate download. You'll be able to download and read them, then take action, within minutes.

Additionally, you'll also find your login to the special members-only ***Technology Profits Confidential*** website in that email, where you can view all the past issues, go through our portfolio, check out the full research report library, and more.

The key is that you get started now… before "Apple-Fi" is introduced to the world.

If announced on June 7 as I expect, it will catch most folks by surprise… but not you. You're one of the few people in the world who knows in advance what's set to happen.

For you, June 7 could mark the day you start to become seriously rich… but only if you take action now.

Once June 7 rolls by, though, if you aren't in… it could be too late to profit. You'll kick yourself forever.

With that said, go ahead and click below now to get started.

Take your time to decide if you need to. You can still click the "Subscribe Now" button as long as you remain on this page.

I thank you for your time and I look forward to welcoming you inside ***Technology Profits Confidential***.
