

These Kinds of Water COULD MAKE YOU OLDER

Controversial test shows how the most popular kind of water could age you faster. One of them... however... *might make you younger.*

Please read this letter in full. **The results will shock you.**

Dear HSI Member,

For six years, I've been on a mission to find the world's healthiest water. I've spent over \$7,000 of my own money, traveled thousands of miles, and burned through hundreds of hours examining research done here in the U.S. as well as Germany and Japan.

What I discovered was worth it. Because it turns out just one crucial difference in your water can transform it from a liquid which could speed up aging in the cells of your body...to one that slows it down.

However, you can determine how much a liquid accelerates or slows down your aging based on one simple test.

In this letter, you're going to discover exactly what this test is, and what the results are for the most popular brands of bottled water as well as regular tap water. And then I'm going to show you how to only drink water that helps protect your cells from aging and supports your energy.

But first, let me tell you the story of how I discovered all this...

Six years ago, I met an eccentric man about to turn 50 years old, who looked no older than 30. A good 30.

He told me: "Just a few short years ago, I weighed 300 pounds. But then I discovered an amazing, *new kind of water* and it completely changed my life—I feel like a new man! I have more energy to work out, and I have the motivation to eat better, which helped me finally lose the extra 100 pounds I'd struggled with for decades!"

Not only was he thin, but he looked young as well. And to top things off, I noticed he had boundless energy that would leave a child winded.

"Hardly anyone in the United States knows about this kind of water," he said

He went on and on...and I grew pretty skeptical.

I meet a lot of people bragging about the latest and greatest anti-aging technology, and I tend to sift through the scam artists real fast.

But he was persistent and clearly spoke from the heart, so I opened my mind. Plus, he *did* look unbelievably young for his age. So I agreed to watch a demonstration showing the science behind the water he discovered.

My journey started when he showed me a weird-looking machine

It was about the size of a briefcase.

I tried to figure out what the machine was just by looking at it, and quickly realized it was NOT any kind of cooking appliance, exercise gadget, juicer, abdominal contraction...or anything I'd seen before.

continued...

He began by pushing a button.

...And within a couple minutes I was mesmerized.

I almost couldn't believe what I was seeing. This device didn't look like anything I'd ever seen before, and it was producing what appeared to be regular water.

But then he gave me a sample, and I couldn't deny it any longer: I could FEEL in my body this is real.

He explained to me how this technology is already used all over Japan (where the average lifespan is among the highest of all countries on the planet), even in hospitals, but it's only just getting discovered in the United States.

First we ate at a restaurant and met the owner, who said he was going to get this certain water to use for his cooking.

Then we drove to a large building, where a literal line of people waited to get a temporary supply of this water.

Inside, we watched a French chef give a presentation on how he uses this special water to invigorate the food he cooks.

I sat in the passenger seat of my host's car as we drove through LA, listening as an excited woman called and, on speakerphone, gushed about getting her own supply of it, *after watching her entire family feel and experience the benefits.*

During my trip, my host made sure I had a temporary supply of this water with me the entire time. And even though I didn't expect any sudden results beyond what I felt before, in just two days I noticed some changes.

I also had more energy and felt fantastic... (a tall order considering how good I usually feel.)

Once I got back home, I started doing my own research. And I discovered there was a growing *mountain* of scientific studies showing how healthy it is.

The research goes back almost a hundred years, and even involves Nobel Prize-winning doctors and scientists.

I couldn't stop thinking about this strange water, and how hardly anyone had access to it, or even realized it existed.

I already knew eating processed foods harm the body and accelerate the aging process...but realizing this applied to *liquids* as well was a total health game-changer for me.

I realized I had to do whatever it takes to find *certain* people who are also READY for this water, and give them the opportunity to get a machine for themselves and their families.

But I ALSO realized I had much more research to do. This device I'd spent so much time learning about had an astronomical price. I wondered if there were better options.

Turns out, there was. Which is why I prepared this letter for you. In fact...

You're about to discover what this unusual technology is...

Perhaps you think this is a fantasy.

For most people, it always will be. I suppose it's because they can't open their minds to the idea.

Just a few years ago, I was lucky enough to discover the truth...and I've felt the surprising change in my mind, body, and spirit every day since then.

YOU and your family can too.

So you're probably wondering what makes this water so special. In order to explain it, I have to prepare you for the truth, and I must start by asking you this:

Did you know there's a special type of balance your body must maintain...and hardly anyone knows about it?

Over the past 50 years or so, just about every human being in developed countries began experiencing this imbalance, and it's helping cause just about every depressing change you see in the mirror.

The reason I'm telling you this is because the imbalance you're almost certainly experiencing is the root CAUSE of your accelerated aging.

So what is the imbalance that causes this accelerated aging?

Before I tell you, let me ask you another question:

Have you heard of the "free radical theory of aging"?

It states that (barring an accident or serious illness) your aging is caused by electrons getting ripped out of the molecules within your cells. This is called oxidative damage, and it's a normal part of getting older.

Versions of this oxidative damage are happening all around us, all the time. If you've ever bitten into an apple, put it down for a while, and saw the inner parts begin to turn brown and mushy...that's oxidative damage and it's a normal part of getting older.

Same with a car's exterior rusting out.

This same oxidative damage is going on inside your body constantly, 24 hours a day, 365 days a year.

And this is a major reason why fruits and vegetables are so good for you: They're rich in *antioxidants*.

Antioxidants act like bodyguards who dive in front of you to “take the bullet”

They generously donate their own electrons so yours are spared.

Which is why sprinkling some lemon juice on apple slices keeps them from turning brown. Lemon juice contains a powerful antioxidant: vitamin C.

Protecting yourself from oxidative damage is also crucial for your *energy* levels.

This is because free radicals affect your *mitochondria*. Think of the mitochondria as the **powerhouses** of your cells. They create energy for your body.

If too many free radicals affect your mitochondria, you could feel fatigue.

If you protect yourself from free radicals with antioxidants, you help maintain youthful energy.

For years now, scientists have tested the “*antioxidant potential*” of all kinds of nutrients, hoping they could find the best “bodyguards” to help keep our bodies feeling and functioning like we did when we were younger.

And that's where this machine comes in: it produces a super-powerful antioxidant literally “on tap” whenever you want!

Like I said before, some of the beginning symptoms of too much oxidation are: joint aches, dull skin, low energy...

And these are just *beginning* symptoms.

A few thousand years ago, balancing oxidation with anti-oxidation was no big deal. There wasn't as much...

- ⊘ Pollution
- ⊘ Processed foods
- ⊘ Fruits and vegetables covered and penetrated by pesticides, herbicides, and other toxins
- ⊘ Pollution from cars, buses, trucks, and manufacturing plants
- ⊘ Toxins on our fabrics, cleaners, walls, our entire homes
- ⊘ Plastics
- ⊘ Tap water
- ⊘ Especially bottled water

It goes on and on...

All these things can INCREASE oxidation in your body!

Now, some doctors and scientists have realized the scope of the problem, and decided the solution was to include more antioxidants in our diet—in fact, you've probably heard you should...but consuming regular antioxidants is like bringing a stick to a gunfight.

There are simply too many oxidizing substances in modern living—which have been affecting your body all your life. Unless you plan to live inside a seaside cave your entire life, you're being exposed to more than your body's designed to handle.

Eating a diet richer in antioxidants is a wonderful thing to do, but to deal with the oxidation of modern times, you may need more powerful defenses. Fortunately, a scientific breakthrough has given us just that.

In fact, it's given us a unique “doorway” to harness the power of what might be the most **powerful antioxidant of all...**

Hydrogen

The antioxidant power of hydrogen was investigated by Hungarian Albert Szent-Györgyi, who later won the Nobel Prize for discovering the antioxidant activity of vitamin C.

In fact, in his December 11th, 1937, Nobel lecture, Albert Szent-Györgyi declared:

“...our body really only knows one fuel, hydrogen.”

So what makes it so powerful?

The Five Reasons Why Hydrogen is the Ultimate Antioxidant

1. It's been proven to fight the strongest oxidizing chemical of all: the Hydroxyl radical, which can contribute to DNA damage.
2. But more than just sheer power, hydrogen's health benefits are also quite delicate: It doesn't react with other oxidizing agents, which are actually beneficial to your body.
3. It also doesn't disturb necessary metabolic reactions or disrupt cell signaling.
4. Because it's so small, hydrogen can penetrate the important parts of your body that need support, like your mitochondria (the powerhouse of your cells) and nucleus. Without a powerful antioxidant like hydrogen, dangerous free radicals can flourish here.

continued on next page >>>

5. Hydrogen is able to pass through the blood-brain barrier, and may help improve your brain health with its antioxidant power.

So is it possible to get this super-antioxidant for yourself?

And with the proper DELIVERY system to safely and naturally help support all the cells of your body—including your brain?

Sounds like a pretty tall order. And until a few short decades ago, this was literally impossible unless you were willing to journey deep into the wilderness and find certain exotic springs yourself. (You'll discover why in a moment.)

But a scientific breakthrough, perfected by Japanese scientists, has transformed this breakthrough into something you can access quickly and conveniently, right in the comfort of your own home.

So what is it? It's a certain form of...

Water!

And I say a "certain" form because regular water does NOT contain free hydrogen.

Doesn't matter if it goes through a reverse-osmosis filter...

Doesn't matter if it's bottled by a fancy company for an even fancier price...

...It just doesn't matter. The water in your home and the water you can buy in the store is not even close to this.

It's dead water. How could it not be?

Any kind of water you drink from a regular faucet or most bottles has been through *miles* of corroding metal pipes. Often times they're filled with rat feces and other nasty pollutants.

Think it's just fear-mongering? I'll show you proof of how oxidizing most water is in just a moment. First, consider this:

A three-year investigation by the Environmental Working Group of 20 million water quality tests performed over a five-year period revealed our nation's water contains 316 identified contaminants.

Of those, 202 do not have any established safety standards.

Other disturbing findings of this investigation:

- ⊘ 37% of the 47,677 water systems analyzed had zero records for testing unregulated contaminants
- ⊘ The EPA only requires testing for a fraction of the hundreds of unregulated drinking water pollutants
- ⊘ 252,000,000 Americans have been supplied water containing poisons at levels above the maximum standards for safety

In order for this water to be fit for human consumption, it goes through a harsh chemical process where additives kill lifeforms within the water, and poisons like lye are added in order to adjust the pH. (This is done to protect the metal pipes from rotting—it has nothing to do with *your* safety.)

Don't think you're protected by drinking bottled water either

The Natural Resources Defense Council undertook an exhaustive four-year investigation, which included partnering with three independent laboratories to test more than 1,000 bottles of water distributed by 103 different brands...

Their lab results for bottled water indicated:

- 4% violated federal standards
- 17% violated state guidelines
- 22% violated state enforceable limits

And a study published in the Canadian Journal of Microbiology found that even after just seven days of storage, the bacteria count in bottled water can explode a full **1,000 times greater**.

And consider this for a moment:

Were you really meant to drink water that has been sitting around in a giant tank, or flowing through man-made pipes? Have you ever considered if this water is really the same as that found in the most pristine natural springs of the world?

Turns out, your intuition was right:

There is a "certain something" that is different about this dead water, and it's accelerating your aging

The good news is, you can turn this around by drinking water that's truly "alive" and helps promote your health and longevity. I'll show you exactly what kind this is very soon.

But the key is it must be prepared in the right way.

A groundbreaking study by the Kajiyama Clinic in Japan showed this. More on that in a moment.

First, in order to explain what this *certain* kind of water is, I have to tell you about a scientific process called ionization:

Ionization is changing an atom or molecule into an "ion" by adding or removing electrons. To create the water, some hydrogen atoms are "freed" from the water. (*Remember in science class how water is H₂O? Well, the H stands for hydrogen.*)

The hydrogen is freed up by flowing the water through a special filtration process to ionize the water, which subtly changes the water at the molecular level. The secret is the special use of magnesium, which is used in a certain way within this device to gently react with the water. Here's the equation for what happens:

I realize this might look complicated to anyone who isn't passionate about chemistry, but you only need to know the basics:

On the right side is the H₂? *That's the free hydrogen.*

Now that the free hydrogen has been temporarily created, you simply drink the water which is saturated and alive with it, so the hydrogen can enter your body.

But because you've been drinking nothing but dead water, you haven't gotten the benefits of this free hydrogen.

You've been missing out on the energy your body is designed to have every day!

Think about it: Have you ever drank water that has gone through this unique process before? There's virtually zero chance.

And yet...nothing could be more natural than this *alive water*. Consider the exotic mountain springs renowned for their rejuvenating powers.

Think about this:

The water in these springs seeps through layers of rock towards the surface, which might create free hydrogen. Human beings were meant to drink this kind of water.

Like I said before, hard science is beginning to prove this is true:

Animal studies have confirmed hydrogen-rich water has a powerful, positive effect on multiple organs, including the heart, kidneys, brain, and the ears. It was also shown to help promote a healthy weight as well.

Now, because the research on hydrogen is so new, most of the research on the effects of hydrogen is on animals and hasn't been studied in humans yet.

So while clinical studies are needed to confirm all of these results in humans,

We now have multiple *human studies* showing this water could be a health breakthrough:

In a small study published in the Journal of Clinical Biochemistry and Nutrition, scientists found eight weeks of drink-

ing hydrogen-rich water lowered the oxidative stress of the volunteers. Another human study in Japan confirmed these antioxidant benefits.

A randomized, double-blind, placebo-controlled, crossover study performed by the Kajiyama Clinic in Japan found the free hydrogen-rich water reduced oxidative stress and led to other surprising changes associated with youth.

Taken together, these lab results show that...

Instead of oxidizing and aging your body, this certain kind of water becomes a powerful antioxidant

Regular tap water is just the opposite—a PRO-oxidant that ages your body, just like an apple turns brown within minutes after you take a bite out of it.

This can easily be proven with something called an ORP meter, which stands for Oxidation Reduction Potential. This device actually measures (in number value) how much a liquid either *reduces* the potential for oxidation, or *creates* oxidation.

In other words, it helps indicate how much of a healthy antioxidant a liquid is, or an unhealthy pro-oxidant. A major pharmaceutical company is even trying to corner the market on this technology, because it's so groundbreaking for your health.

In fact, I used an ORP meter to test some of the most popular brands of bottled water, some of which are even advertised as healthy. You can see the results on the next page.

So what is the amazing machine that produces this unique water?

Well, the *first* machine I got my hands on creates this water through a process called **electrolysis**. It worked very well, but there were two problems:

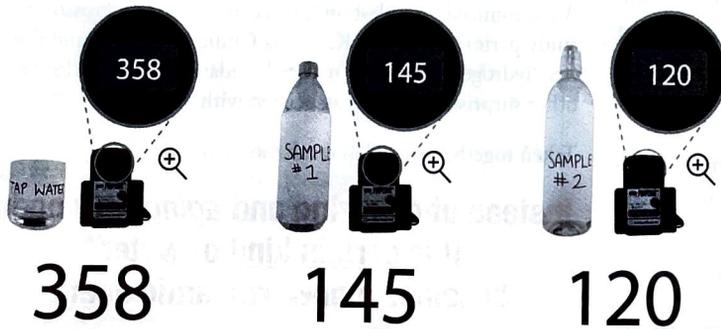

1. It had poor filtering capabilities, so I was still drinking nasty-tasting water.
2. It costs almost \$4,000!

So I began to research—and it was a grueling process. I felt like I was going down a rabbit hole. But finally I made another discovery:

In the last couple years, this technology has made another leap forward. Think of your smartphone: It contains a computer so powerful, just a few years ago, the hardware would take up your entire desk. But now it fits into the palm of your hand.

continued on next page >>>

PRO-OXIDANT POTENTIAL

ANTI-OXIDANT POTENTIAL

If the number value displayed by the ORP meter is positive (above zero) then the water has oxidizing potential.
If the number's negative (below zero) then the water has antioxidant potential.

The same thing has happened with this water device. And I had to search outside the United States entirely to find it. That's because in Ontario, Canada, a pioneer of healthy water has been quietly improving on this technology.

So I got in touch with him. As we spoke, I realized our philosophy matched up perfectly: Produce the best antioxidant water possible, while keeping the prices reasonable for anyone.

So I was thrilled to discover this water technology can now fit inside of a simple pitcher.

It produces this fountain of youth *naturally* (no electrolysis involved) and has components with top-notch filtering capabilities to make the water taste like it just bubbled up from a pristine, natural spring. So it both filters and ionizes water (which creates free hydrogen) using ordinary tap water.

In fact, this new pitcher literally replicates the way water is **supposed to be** in nature when you drink it fresh from a pristine mountain stream.

All you have to do is place the pitcher under your faucet, turn the water on, and fill it with regular tap water. Within moments, the pitcher will transform the regular water into the invigorating, healthy fountain of youth water. Then you can pour it into a glass to drink.

It doesn't get any simpler than that. Armed with this convenient pitcher, and you'll be able to drink this water whenever you like. Plus it's BPA-free.

More good news:

I struck a deal with the inventor to make this pitcher available to readers like yourself. Not only that, but because of this special arrangement with the supplier (which by-

passes the usual route of a retail store) you can get this device at an *absolute bargain*.

So don't worry, your investment will just be a fraction of \$4,000. I'll explain the details in a moment. First, here's how it works:

It's called the **Turapur Pitcher**. It has two stages: First, a special filtering layer of NSF-certified activated carbon. Then a layer of Ion Exchange Resin softens the water.

This stage rids your water of bad tastes and odors and makes it a pleasure to drink.

Then in the second stage, certain minerals enrich the water and **hydrogen is freed for your body to use**.

This is done by a specific combination of three elements:

1. Magnesium
2. Infrared ceramics
3. Tourmaline

First, the magnesium frees up some of the hydrogen. Remember the equation from before?

On the left side of the equation is magnesium and regular water. When they're combined in a certain way, the magnesium atoms will attract some of the oxygen atoms, and they will pair together. Because of this, the hydrogen atoms will split from the oxygen.

This allows them to act as bodyguards, throwing themselves into the line of fire and stopping the oxidative and aging process in trillion of your cells.

And finally, the water goes through an additional stage to activate higher levels of free hydrogen, based on a study published in the Journal of Nanoscience and Nanotechnology.

It's composed of a combination of infrared ceramics and a certain kind of gemstone.

But this is no ordinary stone. It's called tourmaline, and it's this device's secret to...

...transforming the water into the hydrogen-rich, antioxidant water!

When you drink it, your body breaks down the hydrogen (using enzymes called hydrogenases) into single hydrogen ions, which seek out free radicals in your body's 37.2 trillion cells.

You get the benefits whenever you take a refreshing sip.

Although a bargain, this special pitcher is NOT cheap. Quality never is. But frankly, for the health benefits this amazing water provides, I'd happily fork over \$4,000...even if I had to do so in payments over a long time. In fact, that's exactly what I did, for a machine that didn't filter nearly as well.

But like I said before, because of a special arrangement I've made, you won't have to invest anything close to \$4,000.

Or \$3,000 or \$2,000 or \$1,000. And, not even one-tenth of \$4,000 either.

In fact, you can get the Turapür pitcher for just \$59.95.

And you'll also receive free enrollment in our Priority Pass program. With this membership, you won't go a day without this amazing water supporting every cell in your body.

Here's how it works:

Today, we'll rush your Turapür pitcher to you with a new filter inside. This filter will last you a full 60 days.

Then, in 60 days, we'll send you a fresh pack of three filters, and your credit card will be billed the Priority Pass membership price of \$45. From there, we'll send you a new pack of filters every six months.

Because each pack of filters lasts six months, your Priority Pass membership comes out to just 25 measly cents a day. And you can cancel at any time. Frankly...for the life-changing benefits this technology provides...it's a no-brainer.

Compare it to the \$1.50 you would pay for just one bottle of water. If you drink only three per day, that adds up to \$270 every two months. And it *still* doesn't have the benefits of ionization.

If you do the math for your whole family, you might be looking at \$810 for a two-month supply. It's insane.

But now you have the option for better water for a better price.

Skip your morning coffee (which will be much easier once you start drinking this powerful water) and your pitcher's more than paid for

Because I know you believe your health is priceless, and only the best will do, I am beyond excited for how this machine could help change your life.

To get your pitcher rushed to you, simply mail back the form or for faster service call the number.

And as you do, picture this:

Imagine you're living in the world thousands of years ago, before any modern technology or pollution.

You wake up in your home, high in the mountains or near the ocean. Before eating breakfast, you go outside.

Right in your backyard is a quiet stream.

Natural rainfall, and melting snow from higher altitudes, flows down towards you, rushing and bubbling over the mineral-filled rocks.

You walk down right next to the stream, scoop some water into your hands, and drink. In mere moments you FEEL the water energizing you.

THIS...is what water is supposed to deliver you every day... and how it's supposed to feel for you.

Now, even in modern times, YOU can get the kind of water you are meant to drink.

But you must jump on this immediately.

Once we sell out, we will order more...but that could take a couple months, and we might end up raising the price.

This is strictly first come, first served.

Reserve your Turapür pitcher and get it rushed to you, before word spreads and our current stock sells out.

Simply mail back the form on the next page or for faster service call **1-844-452-5906**. Claim this antioxidant water for yourself. And prepare to be amazed.

Sincerely,

Nate Rifkin

Research Associate, Turapür Products

NO-RISK Turapür Pitcher Reservation Form

YES! I want to get my own health, energy, and joy for living back with my personal anti-oxidant fountain of youth.

✓ **Transforms** water into hydrogen-rich, anti-oxidant fountain of energy!

✓ **Removes** bad taste and odors

✓ **Frees up** hydrogen in the water to create a powerful antioxidant

✓ **And helps** you feel, function, and look younger by turning back the clocks in your cells

NORMALLY \$79.95

FREE FILTER INCLUDED

\$20 SAVINGS!

NOW JUST \$59.95

FREE SHIPPING!

(A1U39)

Guarantee—We want you to be 100% protected with your Turapür purchase.

It's important to know the Turapür pitcher is backed by my 100% three-year warranty. This means I personally pledge your Turapür will arrive intact and function perfectly once installed. Otherwise, defective parts will be replaced for free. Filters, however, should always be replaced every two months, and wearing out from normal use is not covered under the warranty. It's that simple.
