terrilynnbond I learned a new word today: andropause. It's another way of referring to the misnomer "male menopause." Not as dramatic or sudden as female menopause, but it is a real development in the aging male with some similar symptoms. What caught my eye was "hot flashes"!

I can't help you men experiencing the unpleasant effects of andropause (yet!!), but I sure can help you women experiencing the unpleasant effects of menopause, such as "hot flashes" among other things.

Oh! There's help for you younger thangs who still have periods, hope

such as "not tiashes" among other things.

Oh! There's help for you younger thangs who still have periods, hope for relief.

Project 23 to the rescue.
